Transactions *of* The Chartered Surveyors' Institution

SESSION 1930-1931.

FIRST ORDINARY GENERAL MEETING OF THE
SESSION 1930-1931,

*Held at The Chartered Surveyors' Institution, Monday,
10th November, 1930.*

INSTITUTION'S CHANGE OF NAME.

The PRESIDENT announced that His Majesty in Council had approved The Institution's application for the change of its name to "The Chartered Surveyors' Institution." The change had been made with the object of emphasising the fact that The Institution was a chartered body, and of bringing out the connection between the chartered surveyor and The Institution, and he was glad to see that the efforts of those who had foreseen the advantages of this step had proved so successful.

NEW MEMBERS.

The following new Members were presented by the PRESIDENT for formal admission to membership under By-law 21, and signed the Register:—

Fellows :

FREEBORN, JOHN HOWARD
RICHARD

HOWARD, ARTHUR JAMES

Professional Associates :

ABSON, JOHN KENNETH
BAILEY, HENRY WILLIAM
BAILEY, LESLIE GEORGE FOSTER
BATCHELOR, FRANK WILLIAM
BELFIELD, CHARLES JOHN
BELLINI, JOHN FREDERICK
BROWNLOW, GEORGE STANLEY
DAY, HENRY GEORGE
DIVES, CYRIL BAZLEY
DOWNHAM, PHILIP RONALD
SHAW
DRAKE, RAYMOND COURTENAY
FLETCHER, WILLIAM PEEL
GOLBY, EDGAR THOMAS
GRAY, DOUGLAS GEORGE
HEBSON, GEORGE
HEPBURN, WILLIAM BARBOUR
HETHERINGTON, JOHN GRAHAM
HOLT, LEONARD EDWARD
HUTT, WILLIAM
JAMES, KENNETH TURNER
JENKINS, WILLIAM HENRY
JOHNSON, JOSEPH JOHN
JONES, DESMOND SEELEY

WILLIAM
WALTERS, JOHN CHEVALIER
WELLS, HERBERT ALEXANDER
WHITE, BENJAMIN
WHITE, GEORGE FREDERICK
KEITH
YATES, ALFRED CHARLES
YOUNG, JOHN MALLOWS

NEW HONORARY SECRETARY.

The PRESIDENT announced that a new Honorary Secretary had been appointed. As members were aware, Mr. Norman Garrard, who had been the Honorary Secretary for upwards of twelve years, had retired just before the commencement of his (the speaker's) presidency of The Institution. The Council had that day appointed to succeed him Mr. Herbert Arthur Steward, whose father had been President of The Institution some 25 years ago. Mr. Steward was unfortunately prevented from being present at that meeting, having been detained by an action in which he was engaged in Exeter. He had not yet had the pleasure of being introduced to Mr. Steward, but he had no doubt that he would carry out his duties to The Institution as efficiently and as well as the late Honorary Secretary, Mr. Norman Garrard.

The PRESIDENT then read his Presidential Address as follows:—

PAPER 528.

THE OPENING ADDRESS.

By E. H. Leeder (President).

Every member when he first takes this Chair as the elected head for the time being of The Institution must do so with a certain amount of diffidence, but, still more, with an acute sense of the responsibilities he is shouldering. It is now sixty-three years since John Clutton, whose portrait on these walls is one of the most treasured possessions of The Institution, was elected the first President of the newly formed society. Between him and myself, forty-six other distinguished members have held that office, and these pre-

decessors of mine have set up a tradition of service to The Institution and to the public which cannot fail to impress upon each new President, as he is elected, the importance of the duties he is undertaking.

In my own case I feel a double responsibility ; not only must I, in bounden duty, do my best not to fall short of the standard laid down by those who have preceded me, but, as the first President from Wales, I must endeavour so to fill the position in which I have been placed as to ensure that no dereliction on my part may prejudice the selection in years to come of another surveyor from the Principality as your head. Fortunately I, in common with previous Presidents, can rely on the loyal support of the Council and members in all parts of the country during my year of office. With that assurance in my mind I enter upon my duties with a fervent hope that, when the time comes for me to hand on this badge to my successor, I may do so with the knowledge that, in your opinion, the interests of The Institution have not suffered in my hands.

I am fortunate, perhaps, that, in one respect at any rate, my year of office may have special cause to be remembered. It is now an open secret to most of you that, after full consultation and discussion with the County Branches, the Council have made application to the Privy Council for authority to change the name by which our society has been known since 1881, when the original " Institution of Surveyors " was incorporated under Her late Majesty's Royal Charter as " The Surveyors' Institution." One cannot, of course, anticipate the decision of the Privy Council, but if our application is approved, The Institution will in future be known as " The Chartered Surveyors' Institution."

There are some, perhaps, among the older members who will look with regret upon the passing of a name well known and well honoured in official and professional life, and one which for half a century has stood for usefulness and service to the body politic no less than to the sectional interests of its members. The Council believe, however, that the

change will be of benefit both to yourselves and the public who employ you, for it will serve to emphasise and explain the connection between the increasingly large body of members who use the designation "Chartered Surveyor" and our Institution, a relationship which hitherto has not been appreciated in every quarter.

At this point I will pause to consider one aspect of the attitude of the public towards the professions. The former, with that partly instructed knowledge which not infrequently leads astray, realise the advantage of consulting qualified men, but are apt to be hypnotised into believing that imposing strings of initials can safely be accepted as evidence of professional ability and standing. The demand for such professional affixes has naturally created a supply, and so many of them have been evolved that I should not be surprised if the number of possible permutations and combinations of letters is already approaching exhaustion. At any rate the would-be practitioner can hardly afford nowadays to let his name and letter paper remain unembellished with alphabetical appendages.

There are, however, qualifications and qualifications. Within the last decade or so, in almost every profession except law and medicine, new societies have been formed. Their doors have been opened wide, and membership of some at least can be obtained with little formality beyond the filling in of an application form and the payment of an admission fee. The result is confusion worse confounded in the public mind. To the average citizen who wishes to consult a professional man I would recommend the observance of one golden rule: "See that the man you employ" is a Chartered Civil Engineer, a Chartered Architect, or "a Chartered Accountant, if you wish for advice within" the scope of those professions, and in all matters covered "by the definition of a surveyor* in The Institution Bye-

*"The art of determining the value of all descriptions of landed, mineral and house property, and of the various interests therein; the practice of managing and developing estates; and the science of admeasuring and delineating the physical features of the earth, and of measuring and estimating artificers' work."

“ laws consult a Chartered Surveyor. In any event you
“ will by so doing have taken a precaution which I suggest
“ might well be imposed upon all trustees and public com-
“ panies, for the right to use the designation “ chartered ”
“ indicates a connection which, in the case of the oldest
“ and most representative societies in those professions,
“ can only be acquired after a recognised period of training
“ and stringent examination test. So far, therefore, as
“ professional efficiency and conduct can be guaranteed,
“ you will have taken all steps which prudence can dictate.”

With this subject is closely bound up that of professional conduct and etiquette, a matter which is receiving close attention by the Council at the present time. It may conveniently be considered under the two heads, professional conduct covering the relationship between the practitioner and his client, and professional etiquette dealing with that between members of the same calling.

With regard to the first of these, there can be little difference of opinion. I hope and believe that every person holding himself out as practising a profession, whether a member of a recognised society or not, will show himself anxious to serve his client rather than to further his own interest. This is a matter to which the chartered bodies attach the utmost importance. One of the objects of the founders of The Institution was to inculcate the highest standard of professional honour, and members, in dealing with the many important and intricate matters upon which their advice is sought, are required to live up to that rule and to give first place always to the interests of their clients.

On the relationship which should exist between members of the same profession, there seem, unfortunately, to be different schools of opinion. Methods of obtaining work, which would generally have been looked upon as objectionable a decade or two ago, and still find no favour in the older-established societies, are permitted, or at least not discouraged, by some of the newer bodies. This applies not only to surveyors, but also, I understand, to architects, accountants, engineers, and other professional men. Are

these callings in future to remain subject to the ordinary rules which in the past have differentiated a profession from a trade, or are they to be carried on on commercial lines? Under existing conditions it is not an easy question to answer, and to some extent at least responsibility for the reply must rest with practitioners outside the ranks of the older societies. There is no doubt that the impatience of all restraint, which has been a feature of post-war conditions, combined with increase in competition, has added to the difficulty of the problem ; but I question greatly whether methods which must in the long run tend to lower the status of the professional man in the eyes of the public can prove to his ultimate advantage.

I enter into office at a time of serious depression in trade and unprecedented unemployment among the people of this country. It is only now, I think, that we are feeling the full force of the shock inflicted by the War and its aftermath, and the effects are the more serious because they have been so long delayed. Although perhaps little evidence of trade inactivity was visible in the streets, some of you who visited Cardiff and Swansea in June may have remarked on the regrettable idleness noticeable in the works and docks of those once busy and prosperous centres. These two great towns provide the outlet for the industrial districts of South Wales, and their prosperity or otherwise may, therefore, be looked upon as the pulse by which the health of the surrounding areas may be measured. While I cannot speak with the same personal knowledge of Lancashire and Yorkshire, the Midlands and the North-East Coast, I fear that similar conditions prevail in those districts with their casualty list of unemployed.

Questions relating to trade disturbance and depression may, perhaps, appear unusual as the main subject of a Presidential Address. Their effect, however, is so intimately related to the matters with which we have to deal, from agricultural prospects to the development of urban estates, from the value of every description of land and the erections upon it, to the cost of repairs and improvements,

that I may be forgiven for such a departure from precedent.

On such general questions it is not for a surveyor to attempt to prophesy the future, nor, indeed, can I claim to be a prophet or a prophet's son. I would, however, deprecate undue pessimism. Clearly economists and business men, both British and foreign, are still hopeful as to the ultimate recovery of our trade and manufactures. There is urgent need, however, for each to do his utmost to stimulate and prepare for the revival which we trust must come. Dead wood, in the shape of obsolete machinery and processes, must be cut away so that the sap may flow more freely through the efficient members of industry. There must be thorough enquiry into our ability to regain lost markets, unprejudiced either by rigid political doctrines or fixed notions as to existing standards of life. The wise direction of capital into channels of production is already, no doubt, receiving the attention of Mr. Snowden's Committee on Finance and Industry, the result of whose deliberations will be awaited with interest by surveyors no less than other members of the community. And lastly, there is good ground for hope in the altered attitude of official trades unionism to the problems which confront them. The Melchett-Turner conversations, the interchange of views between the Federation of British Industries and the Economic Committee of the Trades Union Congress, and the presidential address of Mr. Beard at the latter's Annual Convention in Nottingham recently, are evidence of the changed and constructive spirit which prevails.

New Industries in South Wales.

In spite of the difficult times through which we are passing, South Wales is still producing all classes of steel ; the greater portion of our output is, however, in the form of tinplate and sheet bars, and under normal trade conditions should amount to about $1\frac{1}{2}$ million tons per annum. It follows, therefore, that the bulk of the South Wales steel

industry depends for its prosperity on the welfare of these trades.

The tinplate industry is a localised one. For many years it was a monopoly of South Wales, and in spite of the remarkable development in foreign countries, South Wales in 1929 produced a larger output of tinplate than ever before in its history.

As we must in some measure look to new industries for the restoration of our national prosperity, it may be of interest here to refer to an offshoot of the tinplate industry which has recently been developed—that of fruit and vegetable canning.

The National Food Canning Council—formed within the last five years—turned their attention to the canning of gooseberries, strawberries, raspberries, damsons, plums, &c., and are thus creating new consumers of canned fruits. There has also been a surprising development in the canning of fresh peas. We are all aware that dried peas have been packed and sold in large quantities in this country for some years, mainly peas of foreign origin. The canned fresh pea has already ousted the dried pea to such an extent that some of the firms originally engaged in dried pea packing are already turning their attention to the canning of the green variety.

There is definite evidence that the National Food Council, encouraged by the Ministry of Agriculture and its research stations, is already doing substantial good to the fruit and vegetable growers in this country, and indirectly to the tinplate industry. Their work in developing a new industry and finding a new outlet for the products of an old one is an example of initiative which should be borne in mind, and followed wherever opportunity offers.

With no machinery for the manufacture and closing of cans, with no technical knowledge available in Great Britain of the laying out and erection of canning works, nor of processing, with severe and established American competition, and public and medical prejudice to be overcome, the canning industry was initiated by the Welsh tin-

plate manufacturers five years ago. To-day these difficulties have been successfully surmounted, and British canning is a commercially successful enterprise with good prospects. Its products are now regularly to be seen in the stocks of retail stores ; they compare favourably both in price and quality with the foreign article ; the fact that they bear the British National mark is a guarantee of their excellence. It is to be hoped that the public, when buying canned goods, will insist on the home-produced variety, and so help this industry to establish itself and provide employment for our countrymen.

Other important industries have also sprung up in South Wales, two of which, namely, the Mond Nickel Company of Clydach (now merged in the International Nickel Company of Canada) and the National Oil Refineries at Llandarcy, were largely influenced to erect works in that district by my firm, who selected and secured sites on their behalf.

The first named was founded by the late Mr. Ludvig Mond (father of Lord Melchett), one of the most advanced chemists and brilliant commercial men it has ever been my good fortune to meet. His tact and foresight did much to promote the development of a considerable area within a mile and a half radius of his company's works, and has resulted in converting the village of Clydach into a town.

The National Oil Refineries, Ltd., is a subsidiary company of the Anglo-Persian Oil Company, Ltd., who decided in 1915 to erect an oil refinery in this country. My firm were instructed to inspect and report on several prospective sites, one at Fishguard which, owing to its ample dock accommodation and rail facilities, appeared the most favourable proposition. However, upon going carefully into the matter, we arrived at an opposite opinion, and upon being instructed to find a site having greater advantages, we found the one the company ultimately acquired. This comprises an area of about 620 acres within 3 miles of Queen's Dock at Swansea, whence the crude oil is pumped from tankers that convey it from Aberdan in Persia to the works at Llandarcy, the refined fuel oil flowing back by

gravitation to storage tanks in the vicinity of the docks whence it is discharged for shipment.

The refinery at Llandarcy, which was visited by our members at the Cardiff Meeting in June last, is one of the largest, most complete and up to date in Europe, and measured by the extent of its refining, and the number of processes carried out, has few equals in the world. It provides employment for 1,100 people in addition to those constantly engaged on constructional and experimental work.

The Coal Industry.

Important as these newer industries are to Swansea, and while possibly I lay myself open to the charge that my opinion is influenced by the fact that my practice lies mainly in South Wales, it is my considered view that a recovery in the fortunes of the coal industry must precede any general industrial revival. In support of this contention I propose briefly to review the post-war economic history of this staple product, so that we may examine the causes of, and the remedies proposed for, its present condition. The story of coal, moreover, is largely that of other industries unsheltered from the winds of foreign competition, and the conclusions we may draw from it may therefore be capable of wider application.

Coal is mainly an export industry, and must compete in foreign markets at selling prices governed by world conditions of supply and demand. Before the War, when these conditions were calculable to a nicety, it was possible year by year, almost month by month, to adjust the industry to them. The War came with its unprecedented demand for coal, and in the rush to satisfy it old pits were given a new lease of life, technical improvements were neglected, employment boomed, and continuous adjustment to fluctuations of trade became necessary. In the unhealthy prosperity of 1919 and 1920 wages were raised and hours reduced. Meanwhile high prices stimulated competition

in foreign coal fields and in cheaper qualities of coal, and encouraged the exploitation of oil, hydro-electricity, and other fuel substitutes. Even so, this competition was concealed by the great scarcity of coal at the time, and again by the interruption of German supplies during the Ruhr difficulties of 1922 and 1923.

When at last the industry was compelled to face the real facts of the post-war situation, blow after blow fell upon it. With its efficiency impaired by the luxury of eight years' easy profits, it was called upon to face the consequences of eight years' accumulated development both in foreign sources of supply and competing fuel economy inventions. Markets vanished with the satiation of the special post-war demand and the resumption of German competition in 1924. The Government's deflation policy, which culminated in 1925 with the stabilisation of sterling at its pre-war dollar value, had its inevitably depressing effect on prices, while wages, loan interest and other costs lagged behind at boom levels. European countries, on the other hand, assisted their own export industries by stabilising their currencies at a fraction of their former par of exchange, thereby automatically bringing costs into relation with prices, and reducing, or even removing altogether, the burden of indebtedness incurred in re-equipping and re-organising these industries after the War. The local rates, taken over the whole country, increased on an average of 250 per cent. over the 1914 level, the cost of employers' unemployment contribution from 22s. 6d. to 72s. per man per year. Added to these factors came the disastrous national stoppage of 1926, and it is only to-day, I suggest, that we are seeing in full measure how slowly the economic mill has been grinding during the post-war years and how small.

The problem of the coal industry, simply stated, is to bring its selling-prices into relation with those of other coal-exporting nations and to scale down its working costs to a level which will enable that to be done. Reduced wages and increased hours have already failed to achieve the desired end, and in any case the miner's wage is already

lower than that of the unskilled worker in many of the sheltered trades. A reduction in the unemployment contribution may prove politically impracticable ; rates and taxes are things outside the control of industry, while a deliberate policy of currency inflation would be a dangerous and at the present time an unthinkable departure from our traditional financial orthodoxy.

The Coal Mines Act.

The remedy on which the hopes of the Government, the coalowner and the miner are now based is statutory rationalisation by methods not dissimilar to those employed in 1921 for reorganising the railway systems of the country. Under the Coal Mines Act of this year, which was the subject of lengthy debates in both Houses during the recent Parliamentary Session, a Reorganising Commission will be set up, whose duty it will be to promote and assist the amalgamation of colliery undertakings where this would appear to further the national interest. Schemes may be prepared either by the undertakings or the Commission with this end in view. Already existing arrangements for the regulation of output and sale of coal are to be extended to all mining districts and given statutory force. The operation of district marketing schemes will be co-ordinated and controlled by a central council of coalowners who will estimate the demand for coal over a given period, and apportion the quotas of production to be observed by the district executive boards. The latter, in their turn, will determine, by means of a standard tonnage and quota, what portion of the district allocation shall be given to each mine, regard being had to the state of development, efficiency, and working condition of the latter, and the proportion its output bears to that of the district. Minimum selling prices will be fixed, and owners' grievances settled by arbitration.

Working hours will be reduced by the Act from 8 to $7\frac{1}{2}$ per shift, time being measured from the descent of the last man in the shift to the ascent of the first. While the

shortening of hours will result in reduced output and increased costs, it is hoped that these effects will be mitigated by the "spread-over" provisions which were introduced into the Bill in its final stages, and will permit, if the owners and men of a district so agree, the distribution of working hours to be adjusted so as to secure short shifts on Saturdays, or alternate Saturday holidays. District agreements on the spread-over must be approved by the Board of Trade, the Mining Association, and the Miners' Federation. Wages and other labour disputes are to be referred to a National Industrial Board set up on the pattern of that now existing for the railways. For the protection of consumers of coal there will be national and district investigation committees, each appointed by the Board of Trade, with power to call for all relevant information, and to report to the Board if it considers that any provision in a marketing scheme is contrary to the public interest. The Board of Trade, if it concurs, may call for a scheme to be amended or, in certain circumstances, substitute another.

I am sure that every member will join with me in the fervent hope that the Coal Mines Act in operation may justify the anticipations of its promoters, may do something to remove the dissensions which, alas! have too often in the past marred the relations between masters and men, and restore to something of its old prosperity the mining industry.

Nationalisation of Mineral Royalties.

I will now pass on to another question affecting closely the future of the mining branch of our profession. I refer to the nationalisation of mineral royalties, which has, I understand, definitely been adopted as part of the policy of the Government. As the head for the time being of a non-political body, I do not propose to discuss the merits and demerits of nationalisation, but to draw attention to the serious effect it will have on that section of our members who practise as mineral agents and surveyors.

While some would doubtless be appointed to official position in whatever department was entrusted with the administration of the new measure, it is unfortunately beyond doubt that a number of old-established firms will lose the greater part of their business as soon as the State takes over the ownership of mineral royalties.

This branch of our profession has deserved well of the nation. It has, in the past, been instrumental in exploring new mineral fields, proving the existence of unworked deposits, in the development of mineral estates, and the opening up of new mines. Over the long period of years during which the older firms have been in existence, vast stores of technical information have been accumulated which cannot be replaced and may be lost to the country if these firms are driven out of business. By his initiative and highly specialised ability, the mineral agent and surveyor has added to the wealth of the nation and the employment of its people. If, therefore, his livelihood, and that of his staff, is to be jeopardised by legislation enacted in the national interest, I would most strongly urge that that legislation should make provision for reducing the injury he will suffer to a minimum. I am glad to think that just a year ago a deputation of Chartered Surveyors impressed this particular effect of nationalisation upon the then Secretary for Mines, Mr. Ben Turner, M.P., who courteously promised not only sympathetic consideration of our representations, but also to give The Institution an opportunity, when the draft Nationalisation Bill was nearing its final form, of estimating the extent to which its provisions would affect their mining members, and offering suggestions for meeting the difficulty they had foreseen.

The deputation to which I have referred purposely refrained from discussing or offering their views on the policy of nationalisation. In their opinion such questions of national policy were outside their scope, and must be determined by the Government responsible. They made it clear, however, that if such a policy were definitely adopted, and by their comments or suggestions they could be of service in

securing a practicable measure, and one which in operation would work with a minimum of friction, their knowledge and experience would be at the service of the department.

The Land Valuation Bill.

The position with regard to the Valuation Bill is somewhat different. While the responsibility for a final decision with regard to the adoption of a national policy rests with Parliament in this as in other matters, the advocates of the various proposals for the taxation of land propagate their particular schemes with such assurance, while at the same time with such slender qualification to foresee their effect and ramifications, that no such policy should be adopted by any party without the fullest enquiry and consideration. The failure of the land taxation provisions of the 1910 Finance Act, and the injurious effects they had during the time of their operation upon housing and development, indicate the necessity for such a course.

I venture to suggest that a question of this kind should not be made the shuttlecock of political parties. If after careful enquiry it is determined to be in the national interest, it should be adopted as a permanent policy. If, on the other hand, there is reason to believe that its disadvantages would more than counterbalance its advantages, it should be frankly dropped, and not resurrected every few years, on the initiation of comparatively small bodies of enthusiasts, with the resultant creation of an almost continuous atmosphere of doubt and uncertainty. I think I may safely say that if such an impartial enquiry were instituted, the collective knowledge and experience of members of The Institution in all parts of the country, and in every branch of practice, would be placed unreservedly at the disposal of the tribunal.

A policy having thus been decided with a full knowledge of all the factors bearing thereon, it would become necessary, if it were found that there existed some reservoir of value in connection with land which could fairly and reasonably

be tapped, to draft a Bill to give effect to such policy, while at the same time reducing to a minimum the disturbance of equilibrium or injurious effects which might be expected unavoidably to accompany so considerable an addition to our field of taxation. In this respect the precedent of the Rating and Valuation Bill of 1925 might be followed. There, it will be remembered, the ordinary procedure, which surrounds a Government Bill with mystery and secrecy until its introduction in Parliament, was abandoned. A draft of the Bill was sent the previous year to all bodies concerned, such as the various local authority associations, and The Institution, for their comments, in order to insure that the measure when introduced would be one which would be likely to work smoothly in operation and need little amendment in Parliament. In that instance the departure from the usual procedure fully justified itself, and might, I think, be more regularly followed where legislation of this technical character is contemplated.

There is little doubt that, apart from the practicability or otherwise of the principles involved, one of the causes of the failure of the land taxation provisions of the 1910 Act was the manner in which it was drafted. It carried on the face of it evidence of having been prepared by persons having little practical experience of the wide ramifications of the subject with which they were dealing, and in practice it proved unworkable.

There will, no doubt, be differences of opinion as to whether the various taxes then imposed were justifiable or not, but the experience of the 1910 Act indicates how easily capital may be diverted to other forms of investment if there is reason to fear that in land development the return may be uncertain or inadequate.

From speeches which have been made by persons in a position to speak with some authority it would appear that some impost in the nature of the Undeveloped Land Duty of the 1910 Act is under consideration. Now, an annual tax, assessed on a capital value, seems to me to be fundamentally wrong. It attempts to bring together two

entirely different factors ; it is based on the incorrect assumption that all land with a prospective building or improvement value, beyond its value for agricultural purposes, can at once be disposed of for building or improvement ; and it is open to the further objection that, while seemingly insignificant, the real burden of the tax is hidden from and not understood by the public, and, indeed, may in certain cases actually exceed the annual value obtainable at the time from the land for any use to which it may be put. Such a tax would depart from every principle upon which our existing annual payments for public services have been based, in that it would gradually eat into the capital value, and could not be met out of the annual income obtainable.

The Land Valuation Bill only provides for the ascertainment of values ; it gives no indication as to the use to be made of the valuation when completed. In my opinion the two things should not be divorced and treated separately. Apart from the indirect effect upon values of uncertainty and mistrust in the future, the imposition of new and additional burdens upon a particular form of property must have a depressing effect upon its value. Valuations made, therefore, without a knowledge of the burden or burdens to be imposed would speedily prove to be inaccurate and out of date.

Some Effects of De-rating.

While acknowledging the benefits, particularly to agriculture, of the late Government's de-rating measures, I am afraid the latter have in some respects proved disappointing, especially in those depressed and poverty-stricken industrial areas which the concession was intended primarily to relieve. The stagnation of industry, as shown by recent Board of Trade returns, and the unemployment statistics, has become accentuated rather than relieved. While de-rating could never have cured depression, the relief it gave

could, I think, have been made a more efficient restorative if differently applied.

Rates must be paid whether industry is making a profit or a loss ; the poundage is highest where unemployment, and therefore depression, is most severe. Depression, in turn, is accentuated by the incidence of high rates upon industrial costs, and so the vicious circle is completed. Industry has attempted to solve the problem by migrating to lightly rated areas, and the advantage so gained is an important factor in explaining the inequality of fortune among different units of a particular industry.

The de-rating scheme, unfortunately, took no account of this unequal rate burden. The jam was spread thin over the whole of industry instead of being thickly heaped where it was most needed. Had the £26,000,000 gift to industry been weighted in its distribution according to the needs of different areas as shown by their unemployment figures, or concentrated where industrial depression could be traced to transient economic effects of the War, a real change for the better might have been achieved. As it is, the comparative attractions of the lightly rated district are preserved, and the flight from established industrial areas continues. Towns, especially those dependent on a single industry, are becoming derelict when they might have been given a further chance, not only of reviving their staple trade, but of welcoming new or expanding enterprises ; and new towns are rising in green fields, a process which, necessitating as it does the expense of transferring and providing for population from dying areas, is, I suggest, both wasteful economically and injurious to the fair face of England.

Agriculture.

As my practice includes the management of a considerable area of agricultural land, as well as embracing the industrial matters to which I have already referred, I may be expected to make some reference to the agricultural position, more particularly in Wales.

There is, I fear, no question as to the depth of depression into which the industry has been plunged in the great arable districts of Great Britain. Costs of production, which bounded up during the War and the few years of agricultural prosperity which followed, have remained high, while the prices of wheat and other staple products have steadily dropped until they stand little if anything above those of 1913. More and more land is being laid down to grass ; as a result greater quantities of home-grown milk and meat are competing for the home market ; and unemployment among agricultural labourers, a new and distressing feature, is becoming more general. Palliatives of various kinds are being proposed, some of which might do something to ease the situation, but the matter is urgent, and unless immediate steps are taken to lessen the gap between the costs of production and the prices obtainable for produce, the future of agriculture in this country seems parlous. It is not for me to suggest what these steps should be ; duties, subsidies and rebates have been dismissed as impracticable by the constituencies ; but the present position not only in agriculture, but in other industries, appears to have raised doubts, both in the minds of political parties and of voters, as to the wisdom of the *laissez faire* policy we have, as a country, pursued for so long. I am in hopes that the Imperial Conference now sitting may formulate proposals which will convince the electorate that a wider view must be adopted.

In any event, all will agree that a settled and continuing agricultural policy is essential. The hopes raised by the passing of the Agriculture Act, 1920, that Parliament had definitely agreed upon and adopted a permanent policy, and that this leading industry was to be removed from the arena of party politics, speedily proved groundless. In less than a year the Act was repealed. Since then the Agricultural Conference, consisting of representatives of farmers, workers and landowners, which was summoned by the Minister of Agriculture of the present Government with the object of formulating proposals which would make it possible for a

capable farmer on average land to make ordinary farming pay, again raised hopes that some definite line of action might be recommended to meet a position which month by month was giving rise to increased anxiety. In February last the Conference unanimously passed resolutions (1) that the Government should supply to His Majesty's Forces home-killed beef, at any rate for part of the year, and flour and bread made from home-grown wheat ; and (2) that meat and flour used in public institutions by local authorities should be home-produced. At the same time a resolution was passed by a majority of the Conference to the effect that the Government should announce a guaranteed price of 55s. a quarter for all home-grown wheat of the current year's growth.

Since then we have heard nothing more of either the Conference or its recommendations.

The late Mr. Edward Strutt, who not only as a Past-President of The Institution but also as one of the most prominent agriculturists in the kingdom was specially qualified to offer an opinion on such a subject, used to say that wheat was the pivotal crop of arable farming in this country. If it could be profitably grown it exercised a repercussive effect not only on the return obtainable from other crops, but also on that from the production of meat and milk. This view appears now to be more and more widely held, and has resulted in proposals from various quarters advocating the adoption of a quota system which, combined with a guaranteed price based upon the cost of production, would insure that a definite proportion of the flour used in Great Britain for the making of bread and other purposes was home-produced. A scheme with this object, and for giving preference to wheat produced within the Empire, has recently been the subject of an article in the *Times* by Colonel Ruggles-Brise, M.P., and has aroused wide interest.

While, as I have already stated, I do not propose in this Address to suggest what steps should be taken for the rehabilitation of agriculture, I do suggest that these matters

call for the very serious consideration not only of the Government and the Imperial Conference, but also of every good citizen, whether in town or country, who, directly or indirectly, is intimately concerned in securing the prosperity of this vital industry.

So far as South Wales is concerned, the agricultural position is less acute than in many parts of England. Dairy and stock farmers, although not perhaps in affluence, have no great cause for complaint, and in the hill districts sheep farming is still a paying proposition. It is a country as a rule of small farms, calling for no large amount of capital, and a small weekly pay-sheet. The standard of living is not so high as in England, while the Welsh farmer and his family being thrifty and hard-working, and themselves providing most of the labour on the farm, are able to make a fairly comfortable livelihood under market conditions which in different circumstances might almost seem to spell ruin. Rents, too, are not high, averaging from 20s. to 30s. per acre for low land, and 10s. to 15s. per acre for hill farms.

That the above view is correct is shown by the fact that there is still a good demand to rent any decent farm which becomes vacant. It is different with regard to sales ; uncertainty as to the future is having its effect, and investors hesitate to advance purchase money on mortgage at rates which would place occupiers in anything approaching as favourable a position as that in which they stand as tenants. As occupying owners they would have to meet the interest on their mortgages, and also charges for upkeep which in the past were frequently borne by the landowner, while the cost of incoming on purchase, which may to some extent be increased by claims for disturbance, tends to eliminate the tenant farmer, other than the occupier, as a possible buyer.

The Effect of Sporting Rights on Values.

It was my original intention to discuss the effect of sporting rights on the value of property, but I find the late

Mr. Howard Martin in his Presidential Address in 1909 dealt with hunting and shooting so fully as to leave little or nothing for me to say with regard to those two of our national sports. Since Mr. Martin's able survey, however, the breaking up of large estates has reduced the value of sporting, particularly shooting rights ; has withdrawn a certain amount of employment in the shape of keepers and beaters, and has been the cause of loss to local farmers and tradesmen accustomed to supply the necessaries required for rearing game.

So far as shooting is concerned, I fear that heavy taxation and trade depression must exercise their effect on values, and that the high rentals paid, especially for north-country shootings, are bound to drop to at least pre-war level. Quite a number of well-known shoots that formerly were the pride of their owners are now run by syndicates which, doubtless, work satisfactorily in the hands of good sportsmen, but the whole atmosphere is necessarily changed, and under the syndicate system the management of the shoot must almost inevitably rest in the hands of keepers.

Mr. Howard Martin in his Address did not touch upon fishing, and I may, therefore, be able to find something of interest to members to say on that subject. In order to deal with a concrete case I have selected what is without question the premier river in England, the Wye, which enjoys its present reputation by reason of the wise policy adopted at the end of the last century by the Wye Fishing Association, who, at considerable expense, secured the netting rights, which extended up to Symonds Yat and Hay (about 90 miles from the sea). As owing to excessive netting in various forms the breeding stock was becoming rapidly destroyed—in proof of which the lessees' catch on the Duke of Beaufort's fisheries fell from about 12,500 fish in 1892 to about 3,000 in 1901—the total amount received by the Board of Conservators in respect of salmon rod licences dropped to the nominal sum of £118.

In 1901 the Duke of Beaufort sold to the Crown the whole of his fishing rights in the Wye and Severn, which

included rights up to Symonds Yat, one of the conditions of sale being that these rights should be leased to an association of owners, and in consideration thereof the Duke generously agreed to accept £15,000 for his interest, which was at least £5,000 less than the market value. The Crown then granted a lease of the netting rights only (reserving the rights of rod-fishing) to the Wye Fishing Association, and in the lease a clause was inserted to the effect that the Association should not net for profit, but only to pay expenses. The Wye Fishing Association thus obtained absolute control of all the netting rights in tidal waters, also of a very considerable portion of the fresh-water rights in the lower part of the river. The next step taken by the Association was drastic in the extreme, namely, entirely to suspend all netting, and for the years 1902, 1903 and 1904 there was no netting of any kind in the water under their control. Action of this sort was naturally very expensive, as the rent to the Crown, rates and taxes, and other expenses, had to be paid. This was ultimately met by a loan of £5,000 from the Fishmongers' Company, under the personal guarantee of members of the Wye Fishing Association. In 1902 the Board of Conservators passed a bye-law prohibiting the use of draft-nets above Bigsweir Bridge, about 15 miles from the mouth of the river (practically the limit of tidal waters), and from that year onwards the only netting which took place in fresh water was carried on by a few private owners by means of stopping and beating nets. In 1905 the Association resumed netting in tidal waters only, on a very moderate scale, and have continued in the same restricted manner up to the present day. The great difficulty naturally was the question of finance, but this was partly overcome in 1908, when the Board obtained a Provisional Order empowering them to levy a rate of 5s. in the £ on the annual letting value of all the fisheries in the district. These were assessed at £6,500, so that the Board were provided with an additional income of about £1,600 per annum.

Under further powers acquired by Provisional Order

in 1908 the Board prohibited all netting above Brockweir Bridge. Naturally, perhaps, owners of nets vehemently protested against the prohibition of their fishing rights, though results have shown the value of rod-fishing rights far exceeds that of netting which depletes the stock of fish. One instance will suffice: the Association used to pay £55 per annum for the netting rights over four miles of river. This length was subsequently let for rod-fishing at £120 per annum, and later, as the river began to show signs of improvement, at £400 per annum.

In 1924 the Board of Conservators purchased the netting rights from the Crown ; and now all netting is prohibited in the fresh water of the River Wye, while netting in tidal waters is under public control.

What has been done in the Wye is, of course, not possible on all rivers, as in many cases netting in tidal waters is a public right. It would, however, add to the wealth of the country, and provide a valuable addition to our food supply, if all netting was absolutely prohibited in fresh water.

The effect of the steps taken by the Wye Board has been greatly to increase the stock of salmon, with the result that the demand to rent or purchase good water is generally in excess of the supply, and rentals of £1,000 and over are paid for a few miles of water. Comparatively few fishings come on the market, but during the past five or six years a certain number have changed hands at prices varying from £5,000 to £7,000 per mile (one bank only), whilst even higher prices have been paid where moderate-sized dwelling-houses and land have been included.

I fear that my Address may be open to criticism on two counts, first, in relation to the ground I have attempted to cover, and, second, in the demands necessarily made thereby on your patience. My excuse must be the circumstances in which it has been written. Not for a hundred years has our country been faced with the financial and trade difficulties which seem now to surround us. His Royal Highness the Duke of York, when speaking at our Diamond

Jubilee Celebration Banquet in 1928, referred to the many points at which the surveyor's profession touches the ordinary life of the community. It is this that makes me believe that we, by initiative and suggestion, may do something to solve the problems which are before us.

Mr. J. E. BIDWELL (Senior Vice-President), in moving a vote of thanks to the President for his Address, and alluding to the failure of the electric light, said that the unruffled demeanour of the President while giving greater part of his Address by candlelight indicated the spirit in which he would face any difficulties that came before him.

Members might in the past have listened to Addresses from the Presidential Chair containing matters of greater technical interest to the profession, but he was sure that all members would agree with him that no Address in the past had surpassed the one they had just heard in its literary standard and in the aptness of its phraseology. He would venture to congratulate the President on the English in which he had expressed what he had had to say. The Address had shown the President to be possessed of just those qualities which to-day were needed by the head of the profession—a wide knowledge of affairs, and a well-informed outlook, in addition to the highest technical skill.

The President had referred to the fact that in him Wales was represented for the first time in the Chair of The Institution. It was most worthily represented in the person of Mr. Leeder, and the Principality would be the first to recognise that fact.

As to the Valuation Bill, it had now become known, from the King's Speech at the opening of the present Session of Parliament, that one, at any rate, of the objects of that Bill was the taxation of site values. Many of those present were old enough to remember the controversy raised by Mr. Lloyd George's previous effort in the same direction. He would not touch upon that point at so late an hour, but the President had referred to one very important point,

namely, that any taxation based on capital value was fundamentally wrong. He was sure that all surveyors would agree with that.

He would not deal with the question of agriculture, though he could go on at great length on that subject, coming, as he did, from the most distressed part of the arable-farming district of East Anglia, but he did endorse very fully what the late Mr. Strutt had stated, "that wheat " was the basic cereal crop, and that if a remunerative " price for wheat were obtainable by the farmer, the benefit " to him could not be measured by the area under wheat " cropping ; it reacted on all other cereals."

He could have wished that the President had had more time to amplify the question of the value of sporting rights and fishing rights. In his own part of the world fishing rights were practically non-existent, but sporting rights or shooting rights were a matter of great importance, and it was no exaggeration to say that in the eastern counties there were many properties which would have gone out of cultivation and would be of little or no value were it not for the sporting value attached to them.

Mr. G. TURVILLE BROWN (Vice-President) said it gave him great pleasure to second the motion so ably moved by Mr. Bidwell, who, as most members no doubt knew, came from almost as much to the east of the country as Mr. Leeder came from the west. According to the poet, "East is east and west is west, and never the twain " shall meet " ; but he thought after hearing Mr. Bidwell's words of eulogy on the Presidential Address it was impossible to agree with that dictum, because they had met and agreed very well that evening.

The President had touched on three great matters in the following order—industry, agriculture, and sport. That was the order in which he would have expected the President, coming as he did from a great industrial area, to put them, though if he had consulted his heart and his real feelings he would have put sport a little higher up, for he spent

such time as he could spare in a very busy life in fishing in a most beautiful part of the Wye. There he (the speaker) and his daughter had spent many happy hours with Mr. Leeder, whom he had once seen wade waist-high through the waters of the flooded Wye to fetch a bait which had been left on the other bank. He had admired the President as much then as when he saw him now in the Presidential Chair.

With regard to industry, the President had pointed out that in the old days the principal industry in South Wales was the coal industry, but the President himself had been partly instrumental in bringing another great competitor, in the shape of oil, into Llandarcy, where he had conducted a large party of members round the great Anglo-Persian Oil Works last summer.

Coal, as everyone knew, was a depressed industry. The new Coal Act was something of a leap in the dark, and nobody quite knew what its effect would be ; but he would venture to say that a rigid seven hours a day could not be worked in some districts, including, he feared, some parts of South Wales. Shortened hours had been tried before, at a time when the Government really stood the risk, and the effects in certain districts were disastrous. There were, however, certain districts—South Yorkshire—for example, where short hours could be worked, and the shifts duplicated or even triplicated, without unduly uneconomic effects. It was to be hoped that in spite of their present attitude the miners would agree to the “ spreadover.”

With regard to agriculture, he thought that Wales was fortunate compared with the arable districts of eastern England, which were harder hit than any other part of the country. He was old enough to remember a map in a certain blue book which showed large black spots all up the east side of England denoting land withdrawn from cultivation. He was afraid that, unless things changed very soon, there would be another map more chequered still.

Mr. J. O. WATKINS (Honorary Secretary, South Wales

and Monmouth Branch) said it was the opportunity of a lifetime to be able to support a vote of thanks to a President from his native town of Swansea. The Institution had waited many years for its first President from Wales, and he hoped and believed that it would not again be so long before another representative of the Welsh members occupied the chair again.

Their President belied the saying that a man was not without honour save in his own country. In Mr. Leeder they had a man who was honoured both in his own country and his own town both now and before he reached his present position as President of The Chartered Surveyors' Institution. In him they had every faith that he was upholding the interests, not only of the profession generally, but of the members in South Wales, such as the mining members, of whom probably there were a greater number there than elsewhere.

Although Mr. Leeder had not been prominent in public affairs of South Wales in the usual sense, he had yet been a great force behind the scenes. Members had heard that evening how he had foreseen the danger of coal failing at some time, and had had the courage to bring oil into the South Wales district. Llandarcy's works, one of the largest and finest of its kind in Europe, had made a great difference not only to Llandarcy but to Swansea Docks ; and with Swansea Docks were bound up the fortunes of the surveyors of the district.

The President might rest assured that Chartered Surveyors in South Wales wholeheartedly wished him well in his year of office. He felt he was voicing their feelings when he brought to Mr. Leeder their hearty greetings and congratulations on his Address.

The vote of thanks was carried by acclamation.

The PRESIDENT, in reply, thanked members for their kind reception of his Address. It had been a great pleasure to him, coming from the Principality, to hear all the kind

things that had been said about him. Many of them were exaggerated, but he did sincerely hope after a long and busy life in Swansea and its neighbourhood, and in a good many counties of England, as far up as Cheshire, that when he handed over the reins of office to the younger men who would come after him his record would be thought a good one.

He thanked all members for the kindness they had shown him throughout the first six months of his presidency, and hoped for nothing better, when he passed from the Chair at the end of May next, than that it might still be said of him that he had carried out the traditions set by his predecessors of faithful service to The Institution.

PAPER 529.

THE LAND DRAINAGE ACT, 1930.

By A. T. A. Dobson, C.B.E. (Visitor)

(Assistant Secretary, Ministry of Agriculture and Fisheries).

*To be read at the Ordinary General Meeting of The
Surveyors' Institution on Monday, 8th December,
1930.*

I.—Introductory.

It is perhaps fair to assume that no understanding of the Land Drainage Act of 1930 can be completely satisfactory without some appreciation of the events that led up to its passage into law.

The Law of Land Drainage, now happily repealed, was of great antiquity, and in many ways of even greater obscurity. Except in the case of one or two drainage authorities who owe their origin to very early times, the Statute of Sewers (23 Hen. VIII., c. 5) is usually regarded as the foundation upon which all subsequent land drainage legislation has been built. This statute, which is couched in the somewhat quaint language of the period, provides that Commissioners of Sewers, among other things, shall enquire:—

“ Who hath or holdeth any lands or tenements or common of pasture or profit of fishing or hath or may have any hurt, loss, of disadvantage . . . in the same places as well near to the said dangers lets and impediments, as inhabiting or dwelling thereabouts, by the said walls, ditches, banks, gutters, gates, sewers, trenches and other the said impediments and annoyances ; and all those persons and everyone of them, to tax, assess, charge, distrain and punish . . . after the rate of every person's portion, tenure or profit, or after

the quantity of their common of pasture or profit of fishing or other commodities there."

These somewhat obscure words have been generally accepted as meaning that only those can be rated for drainage operations who benefit or might benefit, or who avoid danger or might avoid danger as the result of those operations. In other words, "no benefit, no rates."

The result of this early enactment has been that every drainage district which has been created in this country during the last four centuries has been restricted in extent to the particular area which might be held to benefit or escape danger as the result of the carrying out of drainage operations.

Without taking into account the many areas where "awards" of some kind are in force, there are, at the present moment, some 376 drainage districts under the jurisdiction of authorities of various types whose areas vary from a few hundred acres to (in one case) nearly half a million acres. The inclusion, however, of anything comprehensive in the nature of a large river within the jurisdiction of one of these authorities has been a rare occurrence, and it is only during the past ten years that any attempt has been made to deal with a river like the Ouse or the Welland, and in the case of the former, with somewhat unsatisfactory results.

With the outbreak of war, and the absorption of all able-bodied labour, the normal maintenance work which, especially in low-lying parts of the country, is absolutely vital if the land is to be maintained in a cultivable condition, was perforce neglected, arrears of work rapidly accumulated, and it was only when prisoners of war became available that serious attempts were made to overhaul these arrears, and, indeed, the drainage of new areas tackled, where those concerned had not previously addressed themselves to the necessity for drainage operations.

It is not intended to overload these few pages with facts that are already well known, but it is well to realise that the

War years played a considerable part in producing subsequently the insistent demand that was made for a simplification of the machinery for bringing suitable areas under the jurisdiction of some statutory drainage authority.

The result was the passing of the 1918 Act which, among other provisions, afforded a means by which such authorities could be rapidly set up without the tedious preliminaries that were involved in the earlier Acts. There is no doubt that advantage was taken of the Act. A large number of new drainage districts were created, and the various unemployment relief programmes inaugurated in 1921, with their generous Government grants towards the carrying out of drainage works, acted as an additional incentive. That was before the depression in agriculture had set in, and it was only when the rates to meet the cost of these works began to be levied that many people realised, for the first time, that they had become liable to pay for the drainage of an area within which they had not fully realised that they were included. In one district in particular, namely, that of the Great Ouse, of which the history has been published in some detail [1926, Cmd. 2592], the levying of rates was followed by a passive resistance movement which originated first among those who had never been called upon to pay drainage rates before, and considered, therefore, that they ought never to have been included in the district, and then spread to those who had always paid drainage rates in the past. Other districts were infected, with the result that considerable embarrassment was caused financially to the authorities responsible for the districts concerned.

A special Commission was set up for the River Ouse, whose Report has been referred to above, and subsequently a Royal Commission was set up to investigate the whole question of the existing law of Land Drainage. It is upon the Report of this Royal Commission [1927, Cmd. 2993] that the Land Drainage Act, 1930, is based, and on the whole the Commission's recommendations have been followed very closely.

The two principal points that the Commission particularly emphasised were (a) the necessity for having for each catchment area a supreme authority, to take charge of the main channels of the river and to supervise the authorities responsible for the internal drainage of the area ; and (b) the enlargement of the area of rating.

In addition, the Commission made many recommendations, the effect of which was to consolidate and amend—drastically, in many directions—the whole of the then existing patchwork of land drainage law.

II.—The Act briefly explained.

It would require much more space than is here available to describe the provisions of the Act in any great detail, and it is proposed, therefore, merely to consider those portions which may be said to concern the owner and occupier of agricultural land.

In the first place, the Act requires (Sections 2 and 3) the Minister to set up authorities to be known as Catchment Boards for the catchment areas of the 47 rivers (or groups of rivers) which are enumerated in the First Schedule. In some cases catchment areas have been grouped for convenience of administration.

The Catchment Board is to be the supreme Drainage Authority in each catchment area. It is made responsible (Section 6) for all works on the main river, to be defined on the map of the area (Section 5), and, before it can exercise this power effectively, has to have transferred to itself, by a scheme to be confirmed by the Minister, the powers of any other authority now operating on the main river. It is given supervisory powers over the drainage authorities in its area who are charged with internal drainage.

It is also charged (Section 4) with the general organisation of its area as regards the provision of new internal drainage boards, amalgamation of existing boards, and reconstitution of drainage boards upon an elective basis,

where they are not already on that basis. Finally, the Catchment Board is required to proceed with the abolition of all Commissions of Sewers. All these things a Catchment Board is required to do by means of schemes submitted to the Minister for confirmation.

As will have been gathered from these brief remarks, the position as regards what may be termed internal drainage will remain much as before, except that all the authorities concerned will be armed with the powers conferred upon them by the Act, which are in many cases re-enactments in a greatly improved form of provisions which existed in one or other of the repealed Acts. In this connection, however, it must be understood that many of these authorities will find themselves superseded.

Generally speaking, existing Drainage Boards (constituted on the old "no benefit, no rates" principle, *i.e.*, with jurisdiction only over those areas which are capable of benefiting or escaping danger as the result of drainage operations), will continue to exercise their functions subject to the following:—

- (a) Where they are Commissions of Sewers they will be abolished, but, except in so far as they were previously in charge of any "main rivers," will be reconstituted as elective drainage boards ;
- (b) They may be shorn of some of their area of jurisdiction, *viz.*, in cases where they are now responsible for a length of river which becomes part of the "main river" under the Catchment Board ;
- (c) Even where they are not Commissions of Sewers, they may be still reconstituted upon an elective basis, if they are not now so constituted ;
- (d) They may disappear individually by the amalgamation of several districts ;
- (e) Lastly, where they are comprised within a catchment area, they will come under the general supervision of the Catchment Board.

The general effect will be that there will be two classes of drainage authority—the Catchment Board, on the one hand, responsible for all works on its main river, with supervisory jurisdiction over a wide area, and with considerable powers of raising revenue ; and, on the other hand, the ordinary drainage board (called within a catchment area an “ Internal Drainage Board ”) responsible for the drainage of the limited areas likely to be benefited or escape danger as the result of its operations. The latter type of board, whether within or without a catchment area, will stand possessed of all the powers which are conferred by the Act. As these provisions are of an up-to-date character, the work of these boards should be greatly improved, and in time simplified.

Perhaps the next most important point to consider is how the drainage operations of these two types of authority are to be financed. In the case of drainage authorities charged with internal drainage, these authorities will continue to exercise the power of levying drainage rates directly upon all the hereditaments within their area, and, if they desire, differential rates on various portions of their district.

The Act provides, however, that all rates shall be levied on the basis of annual value (the annual value selected being that for income tax purposes, Schedule A). Agricultural land is to be rated on its full annual value, and other hereditaments at one-third of their annual value, certain special provisions applying in the case of the hereditaments belonging to railway companies.

It may be mentioned at this point that by virtue of the definition of rates in the Rating and Valuation Act, 1925, the de-rating provisions of the Local Government Act of 1929 do not apply to drainage rates levied by this class of authority. In other words, agricultural land does not escape, and has never escaped, the payment of drainage rates levied by this class of drainage authority.

It should also be understood that as drainage authorities have hitherto had the alternative of levying their rates on annual value, or acreage, this new requirement will, in

many cases, mean an entirely new basis upon which rates are to be levied.

Before leaving the question of these internal drainage rates, it will be of considerable importance to landowners and farmers to realise that there should no longer be any of the vagueness that has hitherto existed as to what are owners' and what are occupiers' rates.

Under Section 24 (2) it is made quite clear that an owners' rate is a rate for defraying the expenses of new works, the improvement of existing works, and, where the drainage board is an internal board within a catchment area, the contribution required by the Catchment Board to be made by the internal board. An occupiers' rate, however, is intended to defray all other expenditure, viz., administration and maintenance.

All rates, whether owners or occupiers, are to be levied on and collected from the occupier, who has, however, the right of recovery of any owner's rate from the owner under Section 25 (4) (c). On the demand note for rates (the form of which has already been prescribed in regulations made provisionally on the 3rd October, 1930) provision is made for the amount of rate recoverable from the owner to be shown separately.

So far as the Catchment Boards are concerned, these authorities are empowered to obtain their revenue from three sources.

In the first place the Board has to consider how much of its area is covered (or ought to be covered) by internal drainage boards set up on the basis of direct benefit, above referred to, and it has then to decide what is a fair contribution for these boards to make towards the expenses of the Catchment Board, who are responsible for keeping the "main river" in a proper state of repair, the "main river" being, after all, the channel into which all the water of the internal boards ultimately finds its way (Section 21). This contribution will be collected by the internal boards in the same way, and presumably at the same time, as they collect their other rates for their own

internal drainage purposes, and will be payable, like any other internal drainage rate, by all hereditaments, the de-rating provisions of the 1929 Act, as already explained, not being applicable.

Secondly, the Catchment Board is empowered to precept upon all the county councils and county boroughs wholly or partially comprised in the catchment area (Section 22), and this contribution will be raised by the county councils and county borough councils concerned in exactly the same way as other county or county borough rates are raised. De-rated or partly de-rated hereditaments will not be liable to pay this rate, and so far as this contribution is therefore concerned, agricultural land will not contribute, and productive industries only to a limited extent.

The third source of supply is the Ministry of Agriculture, which is empowered to make grants towards the expenses of the Catchment Board (Section 55), but only in connection with the following two services:—

- (a) For the construction of new works ; and
- (b) For the improvement of existing works.

It should be noted that no Government grant can be made in respect of the administrative expenses of a Catchment Board for the cost of carrying out maintenance work.

From an examination of these three sources of supply, it will be obvious that where administration or maintenance only is concerned, the Catchment Board will decide, in the first place, how much it may consider fair to require the internal drainage boards to pay, and will charge the rest of its expenses to the county councils and county borough councils concerned, in proportion to the rateable value of that portion of the county or the county borough within the catchment area. Where, however, there is any question of new works or the improvement of existing works, the Catchment Board will no doubt approach the Minister in the first instance in order to ascertain how much may be expected by way of Government grant, and then as regards

the balance, it will first decide how much each internal board may be reasonably required to pay, and will charge the remainder to the county and county borough councils.

It should be noted here, however, as regards the county council and county borough council contribution, that these councils cannot be required to contribute a sum in excess of that which would be produced by a 2*d.* rate levied by the authority over the area comprised within the catchment area, except with the consent of the majority of the members of those authorities on the Catchment Board (Section 22).

As regards the contributions of internal drainage boards, an appeal is afforded to these boards in any case where they consider they are being called upon to pay too much. On the other hand, an appeal is given to county and county borough councils in any case where they consider that the internal drainage boards are being required to pay too little (Section 21).

There is one other important feature which should not be lost sight of, and that is that the Catchment Board is also enabled, in certain circumstances, to make contributions to internal boards for work within those boards' areas, either by reason of the fact that they have to deal with a large amount of upland water or that some time must elapse before the districts of those boards can obtain any benefit from the operations of the Catchment Board on the "main river." Here again an appeal is given to internal boards who may feel that they have not obtained a sufficient contribution, as well as to county and county borough councils who may consider that the internal boards are obtaining too much. So much for finance.

Apart from the innovations introduced by the Act, *i.e.*, the constitution of new authorities with wide areas of jurisdiction, it may be generally said that the new Act contains the best of the provisions which existed in the various Acts now repealed, although in many cases in a highly improved and effective form, as well as a number

of new provisions, a few of both of which it is proposed now briefly to discuss.

In the first place, there has been for many years dissatisfaction with the law dealing with obstructions. A reference to Section 44 will show that there has been a considerable strengthening of the law in this respect, and, subject to the safeguards which are provided in the section, both classes of drainage boards already described should have adequate power to deal with anything in the nature of an obstruction to the proper flow of water, whether these obstructions are disused mills or otherwise.

Another source of complaint has been the existence of derelict navigations, which have become a menace to the carrying out and maintenance of proper drainage operations. In Section 40 the provisions of the 1918 Act are incorporated as regards the making of arrangements between drainage boards and navigations for the proper conduct of their responsibilities. But, in addition, Section 41 provides a fairly simple method of obtaining the abandonment altogether of a navigation which is not functioning properly, and thereby preventing the proper execution of drainage works. This is a most important provision, and should prove of great value in some parts of the country.

Section 42 affords drainage boards the useful power of levying tolls, in the absence of a navigation, where vessels use the drainage waterways, and thus cause wear and tear to banks which the drainage ratepayers have to maintain.

Apart from these specific sections dealing with navigations, adequate protection is provided for navigations and other public utility companies like waterworks against the operations of drainage boards.

Another difficulty which has been experienced in the past has been the inability of drainage authorities to deal effectively with such problems as the discharge of solid matter into rivers likely to prevent the proper flow of water. Section 47, therefore, has been incorporated in order to give drainage boards effective powers to make bye-laws for a

large number of purposes, the procedure laid down being designed to give all concerned an adequate opportunity of making any objections or representations that may be necessary.

The provisions in the repealed Acts for the acquisition of land compulsorily or otherwise have always been defective, and Section 45 contains what may be regarded as the most up-to-date procedure on the subject. Any drainage authority in future, finding it necessary to acquire land for the purpose, for example, of making a new cut which may lead, not only to effective drainage, but to an ultimate saving of maintenance expenditure, should have no difficulty in obtaining the necessary land for the purposes, compulsorily if so desired.

In this connection attention may be directed to the provisions of Section 76, which deals with land which has become accreted as the result of drainage operations, and which in due course may become "ripe" for reclamation. Catchment Boards are given powers to acquire such land compulsorily, and in assessing the value no account is to be taken of any increased value which may have accrued to such land by virtue of the fact that accretion has been facilitated by the operations of those drainage boards. In addition, where those works have been carried out with the aid of a Government grant, the Commissioners of Crown Lands are empowered to acquire the lands in question compulsorily from the Catchment Board.

In the case of an area like the Wash, where accretion is in various places proceeding somewhat rapidly, and where the individual landowners usually find it quite beyond their means to take advantage of any such accretion, the provisions of this section should prove of considerable benefit to the community, especially if the execution of drainage works gradually tends (as it is expected to do) to the accretion of large areas which can in time be reclaimed by the construction of comparatively short banks, and thus upon a more or less economic basis.

County councils and county borough councils generally retain, with some modifications, the powers which they possessed under the 1926 Act, and in certain directions their powers are slightly strengthened. These powers are dealt with in Section 50, and a wise administration of some of these powers at all events may prove of some importance to farmers and landowners. For example, to quote one or two isolated cases, these councils still retain the power to require the cleansing and maintenance of watercourses (Section 35). This power has been exercised in various parts of the country with a beneficial effect in the past. Numbers of cases have occurred in which landowners have obtained the clearing of streams adjacent to their estates by approaching the county council and asking them to exercise the necessary powers.

The power was originally contained in Section 2 of the 1926 Act, and in the light of the experience gained since the passing of that Act, certain amendments have been made in the present Act which are designed to facilitate procedure and widen the scope of the provision.

Secondly, these councils are afforded all the powers conferred on Drainage Boards by Section 44 (Removal of obstructions) where there is no Catchment Board.

Thirdly, the facilities for the carrying out of small drainage schemes where only a limited number of owners is effected, which originally formed the subject of Section 16 of the Land Drainage Act, 1918, are incorporated in Section 52 of the Act. The effect of this section, briefly, is to enable small schemes of land drainage to be carried out by county and county borough councils over a very limited area where the creation of a drainage board is hardly justified. This section also provides for the maintenance of the area after the scheme has been carried out, the council becoming, in effect, the drainage authority for the area.

Among the miscellaneous provisions of the Act may be mentioned the following: Under some of the now repealed Land Drainage Acts there were provisions which enabled

landowners, for the better drainage of their own property, to cut drains compulsorily through a neighbouring landowner's land. These provisions, of which, incidentally, little use has for some unaccountable reason been made in the past, are incorporated in this Act in Sections 58 and 59. These sections, together with the relative schedules, might with advantage be studied, as it is, perhaps, possible that their reincarnation in an up-to-date Act may render their adoption a more frequent matter in the future.

In addition, landowners continue to retain a valuable power (Section 57) of securing the cleansing and maintenance of adjoining streams as against the occupier responsible for maintaining those streams.

Lastly, under Section 9, Catchment Boards are required to commute all obligations imposed on persons in connection with the "main river" by reason of tenure, custom, prescription or otherwise. In so far, therefore, as these obligations are in respect of any portion of the "main river," their commutation is compulsory, and the procedure to be followed is contained in the section. Under Section 57 provision is also made for the commutation of liabilities other than on the "main river," but here the commutation (as in the Acts now repealed) is not compulsory on the drainage authority concerned.

III.—Conclusion.

It would be premature to attempt to indicate how so considerable an Act will operate, and what effect it will have. In any case it is hardly within the competence of the writer to hazard any suggestions in this direction. Suffice to say that the Act provides the necessary machinery for securing that, in future, all the waterways and drainage channels in England and Wales can be kept in a proper state of efficiency, and whereas in the past the main rivers (into which all lesser streams ultimately discharge) have to a large extent been neglected, they can now be adequately dealt with.

The picture is, therefore, complete from the smallest ditch to the largest river. Whether advantage will be taken to the fullest extent of the powers that are provided depends upon the co-operation of all the various authorities, some of whom are now for the first time called upon to share in the responsibilities of one of the most important services in connection with the industry of agriculture.

Transactions *of* The Chartered Surveyors' Institution

SESSION 1930-1931.

AT THE ORDINARY GENERAL MEETING

*Held at The Chartered Surveyors' Institution on Monday,
8th December, 1930.*

Mr. E. H. LEEDER (President) in the Chair.

NEW MEMBERS.

The following new Members were presented by the
PRESIDENT for formal admission to membership under Bye-
law 21, and signed the Register:—

Professional Associates :

ADDIE, THOMAS ROBYN
FORRESTER

ANDREWS, PHILIP

AYEAR, BERTRAM

BARTLEY, EDWARD WILTON

BOMER, FREDERICK MELTON

BOND, ROYSTON SIDNEY

CLEGG, WILLIAM THOMAS

COTTAGE, DONALD GORDON

NEAL, ERNEST JOHN TURNER	WEST, HENRY JOHN
OLTON, FRANK CHARLES	

A DISCUSSION took place on

The Land Drainage Act, 1930.

Mr. ROBERT COBB (Member of Council), in proposing a vote of thanks, said The Institution were indebted to Mr. Dobson for his lucid exposition of a difficult Act. He was glad to see that the Act maintained the old principles of Henry VIII., namely, that of "No benefit, "no rates." By the creation of the Catchment Board the Legislature, for the first time in history, were asking an area to pay for the damage done by the rainfall thereon. He felt, however, there might be difficulty in collecting the rates from catchment areas, and the worst thing he could wish Mr. Dobson was that he should be appointed as collector.

The Act was good in three ways. It had finally, and in his opinion rightly, discarded the principle of an acreage rate, and had wholeheartedly adopted that of annual value. Secondly, it provided for the settlement of differences by arbitration instead of Quarter Sessions, an innovation which members of The Institution no doubt would welcome. The third point was that it enabled all watercourses in an area, from the smallest ditch to the largest river, to be dealt with together.

In addition to drainage, the Act provided for defence against water outside the area as well as within. In other words, it dealt with the upkeep and management of sea-walls. The author had referred to the navigable parts of rivers, but he presumed that the cost of works instituted by a navigation authority, such as the Port of London Authority or the Admiralty, would be met, not by charges on internal areas or on Catchment Boards, but by the National Exchequer. It seemed unfair that people in the Medway valley, for example, should be rated for Admiralty operations on that river which were for the benefit of the country as a whole.

The proposed methods of raising the annual cost seemed anomalous, but that, perhaps, was because he did not understand them. It seemed strange, for example, that in an internal area, agricultural land was to be rated on its full annual value, while factories were to be rated on one-third only. Surely the basis should be the same for both? Another anomaly—though here again he was open to correction—seemed to be that whereas in internal areas agricultural land was liable to internal rates because it was assessed as a sewer rate on the annual value, in catchment areas the rates were assessed on rateable value, and in those areas, therefore, agricultural land, being de-rated, paid no rates at all. Taking the matter a little further, property in an internal district not de-rated would have to pay twice over, first on its internal one-third value, and, secondly, its proportion of catchment area expenses through the rates, on its full rateable value. He would like to be informed if he was wrong in his suppositions, but that was how he read the Act.

The assessment of railways seemed extraordinary, because a railway had to be assessed on the value of the land adjoining. If, therefore, a railway ran through moorland or a poor agricultural district it paid at that particular point practically nothing, but in towns it would pay presumably on the site value of the adjoining land. That seemed unfair.

Sections 42 and 45 of the Act were of special importance in his own district. Catchment areas, it seemed, were empowered to levy tolls on navigation authorities whose big liners did serious damage to the sea-wall. Stones and grouting were loosened, and unless much money was spent on repair and upkeep, the wall would eventually be destroyed. As the law at present stood, he understood that, if the wall was repairable by a private owner, he had to pay for the damage ; if by a Sewers Commission, the damage was paid for out of the scots. He would like Mr. Dobson to say whether he was right in that.

Lastly, there was a rule in his district that saltings which were used in cement working must not be dug within a certain distance of a sea wall, on account of the damage that might be caused. The Port of London Authority, however, took no notice of that rule, and their steamers washed all the saltings away up to the foot of the wall, thereby preventing their removal. He would like to know whether any compensation would be payable for the loss of rights thereby caused.

Mr. WILLIAM T. HALL (Vice-President), who seconded the vote of thanks, said that all surveyors who were in any way concerned with the Land Drainage Act would, he felt sure, often refer to Mr. Dobson's Paper for help in their difficulties, of which he foresaw there would be many.

The last speaker had approached the Act from the lower extremities of the catchment areas. Mr. Cobb was specially qualified to speak of areas which had to be defended by sea-walls and by other means from flooding, but he himself was more specially concerned with land adjoining the sources and upper waters of rivers where they came under the authority of Internal Drainage Boards. From that point of view he welcomed a co-ordination of existing methods for cleaning and bringing watercourses into a more satisfactory condition. That condition had steadily deteriorated in the last fifty years. Whereas once it was profitable and the constant practice to keep ditches and watercourses clear

and clean, through force of circumstances, over which the farmers in many cases had no control, that practice had been abandoned, and their present state was deplorable. The Act, he thought, would facilitate work on minor water-courses and ditches, and that was all to the good.

He welcomed the Act as the first step towards the co-ordinating the control both of water supplies and the disposal of the surplus water which, with the growth of towns and populous places, was becoming a greater and greater problem. Improved methods of road-making and sewage disposal tended to throw rainfall and surplus water from industrial areas more quickly into the main channels, and to increase the risk of flooding, an aspect of the problem which in the near future would assume more and more importance.

The problem of providing water for the large centres of population was also becoming increasingly difficult, and water undertakers were endeavouring to obtain a larger share of the rainfall within their areas. The effect of that, combined with the operations of the Catchment Boards under the Drainage Act, was a matter which in the future would require careful consideration, and it was possible that the provisions of the Act dealing with differences between undertakers and Catchment Boards might become of pressing importance.

Another point was that, while quicker surface drainage and the impounding of water for the benefit of large centres of population undoubtedly lessened the liability to floods, there was one effect of that which required consideration. Some years ago the head waters of a big river were impounded to supply certain large centres of population. People who lived down the river were told that they would be less liable to floods in the future, and so it proved to be. One result, however, had been that the old level of underground supplies from wells, in what was now the catchment area of the main river, fell by some 20 feet, and had never since risen. It might be, of course, that a cycle of dry seasons had had some effect, but he was speaking from

experience over thirty years, and remembered certain wells over 100 feet deep in sandstone rock which had lost their water and required boring to a further depth of 20 feet, a serious matter for the owners. Although the old floods might have been disastrous to a certain extent, they were nature's method of replenishing the underground supplies upon which the countryside depended. This problem, in his opinion, would only be solved by setting up a central authority to deal not only with water supply for the whole country, but with the disposal of surplus water and the clearance of main channels.

There was one further point he would like to bring home to all who represented the landed interest. The difficulties encountered in the past in collecting drainage rates had arisen largely because those liable for them did not take proper steps in the early stages to ascertain what their liabilities would be, or whether they were fair. He would, therefore, advise every land agent to watch from the outset the steps taken by Catchment and Internal Drainage Boards, to scrutinise their assessments, and see that they were made on a fair and equitable basis for all concerned.

Mr. C. GERALD EVE (Vice-President) said he would like to add his thanks to Mr. Dobson for his excellent Paper, and for having condensed his exposition of so difficult a subject into so few words.

For the last few years it had been a vexed question whether a drainage rate should be levied by the acre or by annual value. He mourned the death of the acreage principle which he had always preferred to the other, but looked forward to its speedy resurrection when time had proved that the alternative chosen was the worse of the two.

Another point of contention was whether the uplander should contribute something for "throwing his slops" down on the lowlander below him who had paid drainage rates. That burning question had been tested in the Ouse, where the Ouse Drainage Board was given power under Act of Parliament to levy a rate on the uplanders. The up-

lander was not popular with the lowlanders for refusing to pay his rates. When the Royal Commission came along they suggested that the baby should be taken away from the Drainage Board and passed on to the county council. What the Land Drainage Act, 1930, really said was that, with regard to any contributions from the uplanders towards drainage rates, the county council should be asked to send the Catchment Board a cheque, but too close enquiry should not be made as to where the county council were to raise the money through the county rate, and it should be left to that council to decide whether they would collect it from the uplanders or from the lowlanders. That was what the Royal Commission and the Act of Parliament had done, and wisely, in his opinion. They had, however, yet to see how the uplander, through the medium of the county rate, was going to take his medicine.

Mr. Cobb had pointed out, in his view rightly, that the man who was not going to be given any medicine through the county rate was the upland occupier of the agricultural land and agricultural buildings. He alone in the county would contribute nothing towards the passage of water down through the county to the sea. That was wrong. If the upland part of the county was, through the county rate, going to contribute something to the problem of drainage within the county, he did not see why, because the occupier of agricultural land did not pay poor rates, he should not contribute something towards the cost of drainage.

There was also the question what advice they, as land agents and surveyors, were to give their clients so as to protect them against any undue charge for drainage rate. Now that the acreage principle was abandoned, the occupier and owner would pay drainage rates on the gross annual value of Schedule A, the amount of which would have to be carefully ascertained during the re-valuation now in progress. The Schedule A valuation of all lands in internal drainage areas would not only affect their clients' super tax and income tax, but would directly affect the drainage rates levied on the occupier and the owner. Care must therefore

be taken that the gross Schedule A valuations were fair, and that all the tithe had been deducted from each farm where it ought to be deducted, and not, as sometimes happened, from one of the biggest farms of the owner in a parish. They must also see that the drainage rate paid or payable, whether on behalf of the owner or the occupier, was sufficiently taken into consideration before arriving at the gross Schedule A. They would fail in their duty if they did not see that the estates they managed were being reassessed on a scientific basis, and according to full justice. They had then to remember that on that full annual value of the agricultural land inside the internal drainage area they must pay the full new drainage rate, but in the case of farmhouses and farm buildings they would pay on one-third of the annual value. The surveyor or inspector of taxes would put down "200 acres, £200 gross Schedule A," but the drainage authority had to see that that £200 was apportioned in their rate-book as between the farmhouse and buildings on the one hand, and the agricultural land on the other. That meant that, owing to the destruction of the acreage system and the substitution of the annual value system, every Schedule A value of a farm in England had to be apportioned by the drainage authority in order to collect the full drainage rate at the full rate in the £ on the full annual value of agricultural land, and on one-third of the apportioned annual value of the farmhouse *cum* buildings, and, of course, on one-third of any other kind of hereditament other than the bare agricultural land. That apportionment was important to their clients because they paid in full in the one case and one-third in the other case. There was fine scope open for surveyors to discuss with the drainage authority how much would a farmhouse *cum* buildings be liable for out of the £200. If for some reason or other there was not a Schedule A valuation at all, the drainage authority could make one, and if that on the apportionments were not acceptable, there was an appeal to the local magistrates.

He suggested that there was a great and unnecessary

burden of administration and expense thrown upon the country by the change from the acreage principle originally contained in the Bill to that of annual value as now adopted. It would mean violent changes *inter se* between the contributions of owners. For a great many years past the rate had been levied on acreage, on which principle the burden had been borne by farms bought, mortgaged, sold, and inherited, perhaps for centuries. All that had now been changed, and so now would be the burden as between one farm and another. He suggested that surveyors should take the greatest care with regard to the apportionments of Schedule A assessments, and give careful study to the details of the Act to see that they advised their clients without any neglect of duty.

Mr. BASSETT HORNOR (Fellow) said there was no doubt that a co-ordinated authority between the internal districts and the rivers had been wanted for years. The extension of areas so as to include all land within the watershed was, of course, the whole source of difficulty in the Ouse district. There he had represented a number of uplanders, and he could recollect their feelings of anger when they first received drainage demand notes in respect of land which was many miles from any river at all. It seemed, on reflection, a fair and just proposal, but some education would be required in the country districts before it was taken as an accepted fact, and with the collection of the early rates he anticipated a good deal of difficulty.

Under Sections 24 and 25 the rate was to be divided into two parts, the owner's share and the occupier's. All land in Norfolk was let under tenancy agreements which set out specifically what outgoings were borne by each party, and that was taken into account in fixing the rent. By custom also nearly all drainage rates were payable by the landlord, but under the new Act the rate would be collected from the occupier, who would have the right to recover one-half from the owner. On the other hand, his tenancy agreement declared him liable for neither. Which would prevail, the

Act or the tenancy agreement? Or would they run in double harness? The drainage authorities therefore would be put to the expense of dividing the rate into two, and the occupier would be asked to advance half on behalf of his landlord until such time as he could recover it, and this at a time when farmers in Norfolk could hardly carry on at all. If Catchment and Internal Drainage Boards had been permitted to levy their rates on owners where that was the custom, much difficulty might have been avoided.

Then there was the old question as to who was the occupier. Most of the marsh land in East Norfolk was let on seasonal tenancies, a seasonal tenant being a man who hired the grass feed for the months of May to September. The income tax authorities held that a seasonal tenant was not an occupier and charged Schedule B income tax to the owner. If the Catchment Boards followed suit, they would presumably recover both halves of the rate from the owner. If, on the other hand, they did not, very complicated apportionments would have to be made in charging the occupier for the number of weeks or months during which he was in possession.

In his part of the country they had for generations paid rates and taxes on net and not on gross values. The demand notes for drainage rates would be sent to farmers, who would naturally compare the gross with the net figure they had been accustomed to, and this, he thought, would lead to difficulties.

The powers given to Catchment Boards for dealing with rivers were among the most valuable in the Act, and if those powers were really put into force, they might expect untold good from them. There was no doubt that the main river stood in respect to drainage in exactly the same position as the arterial road stood in respect to transport. Unless the main river was kept clear and free from obstruction, there would be disaster.

Finally, he would like to say a word on the point raised by Mr. Cobb in connection with sea defences. He spoke with some interest on this subject, because for upwards of

100 years his firm had been making and collecting a rate in East Norfolk, known as the sea breach rate. By the maintenance of an artificial wall nine miles long protection was given to 66,000 acres of low-lying land behind. It was a large and scattered area of extraordinary shape. His commissioners had found it convenient to make a rate at indefinite periods, generally of four to five years, the interval of time entirely depending upon the damage done by the sea. That had been found to be the most economical way of carrying on, because it curtailed overhead charges. Under the Act, however, he gathered the rate would have to be collected annually. That would mean the provision of special offices and a special staff, and the making of apportionments of nearly every Schedule A assessment. The change to an annual levy and collection of the rate would mean a considerably increased cost without, so far as he could see, any additional benefit to the ratepayers. He therefore felt it was a pity that power had not been given to make exceptions in special cases like that indicated.

Sir GEORGE COURTHOPE, Bart., M.C., M.P. (Associate of Council), after referring to Mr. Dobson's part in the work of the Royal Commission on Land Drainage, said that ideas had changed since the time of Henry VIII. on the question of benefit and contribution.

That monarch considered that benefit arose only from the prevention of risk of flooding, but the present day feeling was that the main channel of a river conferred benefit on anybody whose surplus water it carried away, whether they were liable to be flooded or not.

He must refer to the cynical picture Mr. Gerald Eve had drawn of the doubts, difficulties and problems which the upland maiden would have to face when considering whether she would obtain sufficient benefit to justify her becoming the next bride of the lowland king. He did not believe that picture was justified. In the vast majority of cases the contribution to the Catchment Board would take the form of a small addition to the general rate. Not one

ratepayer in a thousand would realise that he was paying it. He did not believe that one ratepayer in a thousand concerned himself with what was included in the general county rate, and probably some of those present did not know either. There would, of course, be problems here and there, but as surveyors it was their business to settle problems and overcome difficulties. He did not think the position was so serious as Mr. Eve would like them to believe.

The picture that had been put before the Royal Commission as to the condition of drainage in this country was appalling, and he could have wished that Mr. Dobson had said more about it in his speech. It was difficult to realise how dependent they were upon the maintenance of arterial drainage, how little was being done to maintain it, and how largely what was being done by some drainage authorities and some individuals was thwarted and rendered abortive by the inaction or stupidity of those below. The present Act at least attempted to co-ordinate effort in that direction, and to prevent one individual or one authority rendering abortive the work of those above. In carrying out the extended principle of benefit, they did at least bring in as contributors to the cost of main drainage those who had very largely during recent generations rendered that problem a serious one, viz., the great towns and even the country villages. The use of water had increased to an enormous extent, and the rapidity with which water was discharged after being used had increased in proportion. In many cities and towns and even villages there was an importation from another catchment area of a much greater volume of water than the catchment area in which the village or town was situated was accustomed by nature to provide for. All that water was discharged. In his own little village they imported their water partly from the Rother and partly from the Cuckmere, and tipped their dirty water out into the Medway. Although his own property sat astride the watershed between the Rother and the Medway and had no flooding problems, he thought he

received benefit from being allowed to drain his dirty water into the Medway, and that he, and others like him, should pay for it.

At any rate, under the new Act they were going to rope in for the first time all the great cities and towns. It would not hurt the latter very much, because the individual contribution would be insignificant, but it would make a big difference to the rural folk whose land might be ruined if the waste water on it could not be drained away.

Mr. SYDNEY A. KELLY (Member of Council) instanced a watercourse which served no less than eight sewage disposal plants, with the result that the lower reaches were suffering from what came from the highlands. Except for the Land Drainage Act he did not think it would have been possible to have put the burden on the shoulders of those who should pay. Until the Act was passed, the local authority could come under the Public Health Act and take the land for sewage works, and put down surplus water sewers and sewage disposal sewers which discharged the effluent into an already overburdened watercourse. One watercourse he knew of had been raised 1 foot by an hour's shower last summer. This was another instance of the difficulties caused by the great increase in waterproofed surfaces compared with the time when the watercourses first came into being. That was the problem which the Drainage Boards in every place had to face.

When the Drainage Boards came into operation they would be able to impound certain waters which might be useful to many rural districts at present suffering from a lack of drinking water. Water as a commercial asset in this country was, in his opinion, almost approaching the position of electricity ten years ago. The silk and paper industries depended entirely on water for getting rid of their effluent. The Land Drainage Act, 1930, would be of great service to the country in building up those and other industries dependent on water supply in spite of the disparagement poured upon it by Mr. Gerald Eve.

Mr. E. M. KONSTAM, K.C. (Associate), congratulated Mr. Dobson on his exposition of the Act, which in the truest sense was Mr. Dobson's baby. It was a great and statesmanlike measure of reform, and, he hoped, one which would prove a measure of initiation as well.

For the first time the Act enabled a whole river to be dealt with, at any rate for one of its main functions, and almost for the first time all the ratepayers in the catchment area of the river were to contribute to its expenses. In time he hoped the Catchment Boards might become not only controllers of drainage, but also of conservancy, water supply, and the other functions of the river. That was the ideal which the Joint Committee on the Water Power Resources of this country had before them, and he hoped in course of time that ideal might be fulfilled. At any rate the present measure marked a very great step in advance in land drainage alone. They had a great deal to be thankful for, even if it were only for the abolition of that antiquated congeries of Acts which dated back to Henry VI. when the first Commission of Sewers was appointed. When all that miscellaneous hierarchy of Commissioners of Sewers, Drainage Boards, and what not, was reduced to systematic order in course of time, that would be a great thing done.

The fact that the whole catchment area was now to contribute was also a very notable step forward. Here, he thought, reference ought to be made to Sir Harcourt Clare, a great administrator who promoted the Lancashire Drainage Bill some years ago. That measure was, he believed, the first to provide for the levy, by a county council, of contributions for the drainage of the rivers within its area.

He had been interested to hear from Mr. Hall how in his experience the local watercourses and the local main drains had deteriorated. That process had been going on for the last fifty years, since the great agricultural slump began. It was a great satisfaction to hear the consensus of opinion in favour of reform and the development of arterial drainage. It ought never to be forgotten that not only was a big

clean river needed to take the water away and prevent floods, but it was also needed for the carrying away of the normal water supply from those minor watercourses that Mr. Hall had spoken of, when put in order. It was not merely the case of the prevention of catastrophies, but was also of improving agricultural drainage, and drainage from the impermeable surfaces which Mr. Kelly had referred to.

It had been said that the expenditure of the bodies set up under this Act on new works would require justification in the eyes of landowners and agriculturists. Let them look to the example of France, whose agricultural interest bore a greater proportion to the general interests of the nation than was the case in this country. The French also were more frugal people than the English, and more intent on seeing that no money was spent except what brought in a return. They had only to go to France to see how clean the rivers were kept. Hardly a reed was to be seen. What a contrast with the English rivers! If the frugal French could afford to spend money on keeping their rivers clear to take away the water from the land to the sea, and got a good return for their expenditure, one might be fairly sure that we in this country could do the same.

The PRESIDENT said that before putting the vote of thanks to Mr. Dobson, he would like to say how much The Institution appreciated the fact that a high official of the Board of Agriculture had come and expounded an Act which, as Sir George Courthope had said, he had been instrumental to a large extent in drafting. The scope of the Act seemed unlimited, as it extended to the whole of the chief waterways and chief watersheds of the kingdom.

He noticed that the Government had taken care to acquire land which had been reclaimed and on the most favourable terms possible, but he asked who was to compensate the owner whose river banks or land would be eroded by the increased volume of water that many rivers would now be required to carry. That was a point on which he would like Mr. Dobson's views. As an owner of property

adjoining a large river he was put annually to considerable expense in making good damage to the banks largely caused by the additional water that was year by year thrust upon the main river.

Mr. Eve had alarmed him with the tale of difficulties that would have to be foreseen and dealt with by them as land agents to ensure that their clients did not pay too high a drainage rate ; but Sir George Courthope had given him courage, and he looked forward with hope to being able to carry out the provisions of the Act in a manner satisfactory both to his clients and to the drainage authorities.

The vote of thanks was then put to the meeting, and carried with acclamation.

Mr. A. T. A. DOBSON, in reply, said that Mr. Cobb was right in thinking that under the Act navigation authorities were very closely protected. There was, however, a section in the Act under which, if a Catchment Board decided to embark upon a scheme which was largely also for the benefit of the user of the navigation, the navigation would have to make its contribution. The cost of such a scheme, therefore, would not fall wholly upon the ratepayers.

Two criticisms of the Act had been put forward, one with regard to the rating of railway property, and the second was as to why the principle had been adopted of taking the full value for agricultural land and one-third the value for factories. He did not think it would serve any useful purpose if he tried to explain what was in mind when those sections were inserted in the Act, but he would like to recall that from 1918 onwards the principle was established quite clearly, and since that time it had always been the custom in drainage orders that railway property should be rated according to the value of the land on either side. The railway companies were a strong corporation, and the Ministry had had to contest with them the question of how they were going to rate railway property in the case of almost every order passed since 1918. It would, therefore, be readily imagined how both sides gradually and finally

settled down into the sort of consolidated agreement which had been incorporated in the Land Drainage Act of 1930. Moreover, there were originally comparatively few drainage authorities, nearly all in purely agricultural territory ; but with the extension of internal drainage districts, which was clearly contemplated by the Act, urban areas would come much more within the ken of Internal Drainage Boards than in the past, and it was therefore considered advisable to adopt, if possible, some uniform standard of rating property both in agricultural districts and in urban districts.

Mr. Gerald Eve had said that he regretted that rating on the acreage principle had gone. He did not know whether Mr. Eve was aware that perhaps 40 per cent. of the 376 drainage authorities in the country did at the present moment levy their rates on annual value. In all the orders since 1918 provision had had to be made (in compliance with the then existing law) for enabling a Drainage Board to levy its rates on annual value, and the practice had been in all the orders granted—some of which had been keenly contested before Parliament, and, therefore to some extent, created precedents—to adopt the principle for internal drainage purposes of taking agricultural land at its full value, and other hereditaments at one-third value, or in some cases one-fourth. The same basis was adopted in the Act as being one that everybody understood.

Mr. Cobb had raised a point with regard to tolls, and had referred to the Port of London Authority. That Authority was a very powerful Corporation which brought a tremendous amount of trade and shipping to London, and in the process of exercising their powers they prepared waterways for the steamers by dredging the Port, but they did not have the liability of repairing the banks which might suffer from additional water being brought in by such dredging. He did not think there was anything in Section 42 of the Act with regard to tolls that Mr. Cobb could suggest could be used against the Port of London Authority. The power to levy tolls under Section 42 could not be used where a navigation authority was already existing, but only where boats were using waterways without paying anything

for them, and a traffic had sprung up which meant the increased wearing away of the banks. In such cases the ratepayers were paying for damage for which they were not responsible, and it was only then that the Drainage Board could step in and charge a toll to the users of the waterways for navigation purposes.

With regard to saltings, if Mr. Cobb could send him some particulars he would go into the matter and see whether he could offer him any useful advice. The matter seemed to be one for legal interpretation.

Mr. Hall had raised important questions. Under the Act the Catchment Boards had an important task to do. The Thames Conservancy, for example, would now become a Catchment Board, and they would be responsible for seeing that there was no shortage of water in the upper reaches. If there was flooding in the low-lying land above Teddington, the Thames Conservancy were blamed, and if they effected works for taking the flood-water away rapidly so as to prevent that flooding, it might happen that in a dry summer up in the Cotswolds there would be no water for the cattle. It was an easy thing to carry out drainage works and get all the water taken away, and to find in times of drought that there was no water where it was wanted. The Catchment Board would, however, under the Act be responsible not only for drainage but also for water supply, and it would have to be considered whether a suitable scheme could be devised for the Thames whereby not only the channels were enlarged to discharge the flood-water, as was so freely suggested in certain quarters, but also whereby water could be conserved possibly by the construction of reservoirs in the upper waters, as had also been suggested from certain quarters. It was quite clear, however, that Catchment Boards had a water supply as well as a drainage responsibility under the Act.

With regard to Mr. Hornor's point about the necessity under the Act of levying a rate every year, he agreed there would be duplication and so forth, but if the whole responsibility for sea defences was going to rest on the Catchment Board, he thought Mr. Hornor's fears disappeared.

The President had asked who was going to compensate the owner for erosion due to the clearing of channels and watercourses. Under Section 6 the banks of a main river were quite clearly the responsibility of the Catchment Board. The river included the banks. Under that section the Catchment Board had not only responsibility for the main river, but where that main river went out to the sea it had to consider how much work was necessary in the sea defences on either side to maintain the river in a state of repair, both at its mouth and elsewhere.

With regard to gross annual value, he was not a rating expert, but he would remind the meeting that gross annual value, in connection with drainage, first appeared in the Local Government Act, 1929. In that Act provision had to be made for any possible cases where a Drainage Board, instead of having the option of levying the rate on acreage or annual value, was required, under some private Act of which the department might know nothing, to levy its rate on the ordinary poor rate annual value which had disappeared. It was, therefore, necessary to put a section into the Act making the Schedule A annual value compulsory. The Ministry had adopted gross annual value under Schedule A after a good deal of discussion with the Inland Revenue authorities, chiefly because net annual value for Schedule A was only arrived at after deducting the very drainage rate which one was trying to calculate.

Mr. Konstam had spoken some kind words as regards his (the speaker's) work in connection with the present Act, but Mr. Konstam could not escape his own responsibility for it and his pioneer work. He would also like, in connection with the passage of the Bill, to mention Captain Roseveare, the Chief Drainage Engineer, Mr. Mathieson, his Deputy, and also Mr. Dunbar, the Principal in Charge of the Drainage Branch. Lastly, he was glad to see present Mr. Clayton, lately Chief Drainage Engineer of the Ministry, who had given so much assistance to Mr. Konstam (when he was Director of Land Reclamation and Drainage) and also to himself.

PAPER 530.

ST. PAUL'S.**By J. E. Drower, C.B.E. (Member of Council).**

To be read at the Ordinary General Meeting of The Chartered Surveyors' Institution on Monday, 12th January, 1931.

On September 4th, 1666, the Gothic Cathedral of St. Paul's crowned the City of London. It had been sadly marred and damaged by time, by the elements, and by the hands of men. Yet it stood stately and admired, the pride of the City. On the day named the Great Fire of London reached it, the closely packed dwellings and warehouses around it were a roaring furnace, the roofs caught fire, a stream of molten lead poured down upon the pavement and flowed along the streets, the huge roof timbers crashed down upon and broke through the vaulted ceilings, the counterforts and flying buttresses left to push against nothing fell in, and, when the fire died out, the mighty structure was an empty shell. Pepys, who saw it three days later, says: "It was a miserable sight with all the roofs fallen and the body of the choir fallen into St. Faith's." The remaining walls were in the end pulled down, and the noble fane became a shapeless mass of broken stone and rubble.

All that is left of old St. Paul's for us to see to-day are the foundations of the Chapter House and of some buttresses, a few remains of monuments in the Crypt, and a collection of carved and moulded stone fragments kept in the Gallery. No! Not all! For the piers in the Crypt are faced with Kentish rag ashlar from the old Cathedral, and experts can point to some stones showing the diagonal chisel

stroke of the Norman masons. But there is something left which we cannot see, but which is of great importance to us now—the rubble, now forming the cores of the thicker walls, and of the great piers and bastions supporting the dome.

St. Paul's had to be rebuilt, and I think that a very brief study of the style and of the method of building the new church might enable us to understand more clearly the problems which had to be solved in dealing with the defects developed during the last two centuries and more since the completion of the structure in 1708. I would ask those among you who are architects to forgive me if my remarks are somewhat elementary, and I would ask you also to notice that they refer more particularly to the dome and its supports.

St. Paul's had to be rebuilt, but who was there who could design a new church worthy of the site and its traditions? As has often happened in the history of our land, the occasion brought forth the man ; this time the man was Christopher Wren. His early training had not been that of an architect, but he had architectural knowledge. He was a genius, and who can say what a genius is capable of? He is not to be reckoned with other folk ; he is above and beyond them. And so, after endless squabbles, intrigues and jealousies, which it were fastidious to follow (let the dead bury their dead), he evolved and carried into being what is, in the opinion of many, the noblest example of the mistress art in Christendom.

There was, at first, a question of rebuilding St. Paul's in the Gothic style, but the idea was abandoned. The Renaissance had swept away the decaying remains of Gothic art, philosophy and literature in its triumphant and irresistible march. Gothic was an anachronism, and Classic took its place in architecture. So out of the ashes of the old building rose what has been called " the Parish Church of " the Empire."

Wren drew the inspiration for his design indirectly from ancient Rome, and directly from the great Italian and

French architects of the Renaissance. His plan is Gothic ; his construction sometimes is.

For a moment let us take two extreme typical examples of Gothic and Classic architecture and contrast them. For Roman architecture there is the Pantheon. Its dome is 142 feet in internal diameter, that of St. Paul's being 112 feet. Who can contemplate the Pantheon without being struck by its directness and virility? No need of buttresses here or counterforts ; the supporting walls are strong enough in themselves to carry the ponderous dome without help.

For our extreme type of Gothic architecture let us take Beauvais Cathedral, whose choir is often said to be its noblest expression. Look at the wonderful system of buttresses and flying buttresses supporting the vaulted ceiling rising more than 150 feet above the floor ; surely the loveliest scaffolding ever built ! If a fire broke out in the roof and the timbers fell in and broke down the vaulting, as in old St. Paul's, the interdependence of the various members is such that the whole would come tumbling down like a child's card castle. This is no theory ; it has actually fallen twice although fire was not the primary cause.

Wren loved Classic architecture, but he was no fanatic. What was good in Gothic architecture he could appreciate and use when it suited him. What Kipling calls the "lavish " Roman style " he could not use for his construction. You will notice how few are the openings in the Pantheon, and that its lighting is from a hole in the roof. St. Paul's is flooded with light ; it has innumerable doors, windows, archways, recesses, and passages, not one of them placed but in positions carefully calculated. Wren had his examples ; he turned to the great architects of the Renaissance ; he studied St. Peter's, Versailles, Perrault's Colonnade in the Louvre ; he learnt from them, but did not copy them, and he produced a work bearing the impress of originality. The great mathematicians of the Renaissance, Newton, Huyghens, Pascal, the Bernouillis, and others, had put an instrument into the hands of architects which had

been wanting to the Romans. To Wren, himself a fine mathematician, it was made possible to calculate with something like accuracy the strains and stresses of his construction. His design shows us what mathematicians call "an elegant," that is a completely satisfying solution of a difficult problem in statics. The solution is brought about by the co-operation of science and art in a building where everything serves a purpose, where nothing is sacrificed to effect, and it has given us our mighty cathedral soaring above the dust and din of the great City, at once a witness and a symbol.

We know that Wren had set his mind upon a dome as the great and striking feature of his design, but it should be a dome different from any hitherto built in that he wanted it crowned by a high lantern which would form a distinctive feature. And this lantern is no less than 88 feet high, and weighs 847 tons. It is just a few inches higher than the corner tower of the Public Offices opposite us. The problem of carrying it conditioned the whole design of the central structure. It could not be carried on the top of a masonry dome shaped as the actual dome is shaped, so by an inspiration Wren placed it on the apex of an 18-inch thick brick cone, under which he turned the inner dome which we see from the church floor. The joint-springing of these two domes rests on a wall slightly battering inwards and reaching down to the level of the Whispering Gallery. Between the base of the dome and the upright vertical wall surrounding it are 32 spandril walls serving as buttresses to the cone and supporting the plate of the oaken roof trusses, the weight of the roof being thus skilfully used to make the buttresses more effective.

The battering inner wall would not be strong enough of itself to sustain the weight of the dome and cone and to react against their thrust. So outside it is built that wonderfully beautiful peristyle with its supporting drum, and a buttressing system of 32 radial members. Gothic had taught Wren something of buttressing, but he used his knowledge in his own way. When we see the peristyle and

drum rising majestically above the cathedral roofs we are not looking at the skeleton supporting the building, but at its clothing of beauty. Even the Venus of Milo had her skeleton ; we neither see it nor want to see it ; what have entranced a hundred past generations of men and will (*pace* Mr. Epstein) continue to entrance future generations are the harmonious lines of the outer covering. So with St. Paul's, we are content with the columns, the cornices, the moulded archways doing their constructional duty, as it were, unconsciously with the serene calm characteristic of Classic as contrasted with the evident strain and effort of Gothic. Under all this system and carrying it all are the eight great arches surrounding the dome space themselves resting on eight piers and four bastions carried down to the foundations.

You will notice that the inner wall of the drum is carried directly by the arches, and its weight transferred by those arches to the great piers ; the outer wall and the buttress system chiefly rests on the thick vaulting immediately behind the great arches.

The eight great arches spring from the ends of the piers rising from the church floor ; these are of rubble cased with Portland stone, and are smaller than the Crypt piers upon which they rest, and that is a point to be borne in mind. The Crypt piers are of uncoursed faced with coursed rubble.

The rebuilding started slowly, for the site was incumbered by the vast heap of rubble and rubbish from the old building. While the new building is mostly upon the old site, it overlaps the latter in places, and that is another point to bear in mind.

The foundations were dug, and the footings and the Crypt piers built of the old rubble. This seems not to have been very carefully cleaned ; it was not coursed, and it gave one the impression of being rather a very coarse concrete, made in the French fashion and with lime mortar ; it is of all sorts of stone, even clunch having been found in it. At any rate the voids were so well filled up with mortar as to make grouting in the manner successfully applied to

the very loose rubble of Lincoln and Winchester unsuitable. One authority stated that the mortar was overlimed, and that would diminish its strength.

It was not long before trouble arose, and this trouble seems to have been anticipated, to some extent at any rate, by Wren. Where the plan of the old and new buildings coincide, the weight of the ancient church compressing the soil for centuries had made it as hard as brick. But where the new building goes outside the old, the soil was not so compressed and was softer, and the imposed weight had its effect, so that sinking occurred. Another cause of settlement was the setting of the mortar and the drying out of the rubble. As long as this was confined to the foundations and Crypt it did not matter much ; it could be levelled up and put right without difficulty. The Crypt piers were built; those rising above the church floor were put in hand, and their whole weight was carried by the uncoursed rubble of the Crypt piers. As the weight piled up above the church floor, they had what Mr. Allen describes as a punching action upon the piers below, the facing of the latter was pushed out, and Wren increased them in size by recasing. The settling of the Crypt piers seems to have stopped, and the superstructure was proceeded with. And then the superstructure, owing to the drying out of the rubble, began to sink. None of these things seems to have worried Wren very much. There was no quick-setting Portland cement in those days, and unequal settlement of rubble bedded in mortar was something that happened in every building. So they waited a bit until the mortar had set and then levelled up. The Committee found that this levelling up was done systematically from stage to stage of the building. The best example that I know of this levelling up is outside the dome area. It is in the side wall of the South Transept. Here you can see where the original moulding of the great panel had sunk, and you can see how it was levelled up ; it has remained level ever since. And so in due time Wren judged it safe to proceed, the drum and the peristyle were built, the brick cone and dome raised upon it, and on one

October day in 1709 "some strong-backed labourer, probably of the sister Isle," as Carlyle says, carried up the last stone of the lantern to be set by the great architect in the presence of his son.

In the masonry at the joint-springing of the cone and inner dome Wren put his great iron chain. It has been uncovered more than once, and is perfectly sound. Its use has been criticised on æsthetic grounds, which seem strange to us now. Young and zealous Gothicists of some half-century ago tore passion into tatters over it, and the intellectual gymnastics they indulged in to excuse Brunelleschi's chain at Florence and to condemn Wren's in St. Paul's amused the cynical. The strangest part of it is that Brunelleschi did not put an iron chain, although I believe he proposed one. His so-called chains are of oak beams strapped with iron at the angles.

When the cry went up some 20 years ago that St. Paul's was in danger the public seemed to take it for granted that the foundations were at fault, that the building was sinking, and that anything might happen. The papers were overwhelmed with an avalanche of letters from all sorts of people, qualified and unqualified, who gave advice and opinions in the most decided fashion. One very insistent adviser wrote that the only way to save St. Paul's was to make the foundations safe, that the only way to make the foundations safe was to make them hard as stone, and that the only way to do that was to freeze them. How he proposed doing this I have forgotten, but it seemed to offer no difficulty to him.

Careful examination and measurements made by the surveyor to the fabric, Sir Mervyn Macartney, showed that many puzzling problems were involved in tracing the cause of defects which had appeared in the structure and in applying remedies. So the Dean and Chapter appointed a Commission to advise and report. This Commission consisted of Sir Aston Webb, Sir Mervyn Macartney, Sir Basil Mott, Mr. E. C. Trench, and Sir George Humphreys. The names inspired at once a confidence which time has justified

triumphantly, and the authorities have every reason to be proud of their choice. After the Commission had examined and reported, a Working Committee was appointed consisting of the members of the old Commission together with Sir Charles Morgan and Captain Stanley Peach. Two other names are worthy of our gratitude and remembrance, that of the indefatigable Canon Alexander and that of Mr. Godfrey Allen, Sir Mervyn Macartney's second in command, to whom I am indebted for choosing the slides we are using.

"Science is measurement," someone has said. If it is, then our Committee were scientific to the last degree. They at once set about measurements, or rather set about perfecting the system of measurements, and of the recording of results which they found in action. They measured the building, they measured and recorded the widths of cracks, they measured and recorded seasonal movements, they plumbed and levelled, using the most modern instruments capable of exquisite delicacy, and they employed the proper men to use them.

The first task was to see whether any partial or total tilt of the building had taken place since Wren did his last levelling up before the cone and dome were built. The method used was simple, but very delicate. Before Wren started his dome, there had been a tilting action going on. Had it stopped? Had it not stopped, the lantern poised on the top of the dome and towering up 88 feet would show it. The instruments were set to work to find out any deviation from the vertical, and the result is written in four words in the Committee's report "There is no deviation!" When Wren with his son stepped down from the scaffolding on that October day of which I spoke, he left his lantern upright, and upright it is still after two centuries and more.

This discovery cleared the air: there was nothing wrong with the foundations. Working carefully and cautiously, studying their measurements with understanding, the Committee finally concluded that there were but two points needing attention, the soundness of the eight piers and the

deformation and movement of the drum as deduced from their measurements.

The diagram on the wall shows a plan of one of the eight piers above the church floor. The ends facing inwards carry the greater part of the weight of the structure above them, and are built of fairly large and well-squared stones. But the sides are faced with quite thin Portland stone, rough at the back and badly bedded. These sides have given trouble ever since the cathedral was built, and have been repaired again and again. The diagram shows a section of the side of the pier, and represents roughly the sort of thing that was found in repairing the piers.

The Portland stone casing is, for practical purposes, incompressible, but the uncoursed rubble of the core is not, so that the casing had to bear an undue share of the weight when the superincumbent load was placed on it ; it could not give, and the core could and did give. The rubble filling contains no less than 60 per cent. of mortar, so that its weight-bearing capacity was not great. The Portland stone spalled and split. Wren and his successors were repairing it continually, and used a lot of iron cramps to tie back the casing to the core. Then these cramps rusted, burst the stone, and made matters worse. Over 1,000 of these cramps were removed during the restoration. This was the state of affairs which Sir Mervyn Macartney inherited when he took office, and with which he and the Committee had to deal. Sir Mervyn, before the appointment of the Committee, started on one pier, examined its casing stone by stone, cut out the defective parts, and replaced them with stone deeper on bed well bonded with the core, and grouted in with liquid cement at the back. He found that more of this grout disappeared than was necessary for simply filling in at the back of the new stone, and he inferred from that there were crevices and cracks in the core. This was serious, and it was confirmed by the investigation of the Committee.

They came to the conclusion that the cracks and crevices must be filled up by grouting, but that something more was

wanted. You will notice that the greater part of the weight rests on the inner ends or about two-fifths of the area of the pier. Of course there is a spreading action which distributes the weight further down. In order to increase this spreading action, and so to utilise more of the pier, a system of horizontal reinforcement was decided upon. And this is how they proceeded: They drilled holes traversing the piers in all directions so as to make certain of crossing any cracks in the rubble. These holes were cleansed thoroughly in order to leave the cracks open, and very liquid cement-grout was pumped in at 50-lb. pressure. The cement set in the holes faster than it could get away into the cracks, so they drilled it out of the holes and pumped again ; never less than twice, and sometimes even six times was this done before refusal point was reached ; then " Staybrite " oval steel indented bars of sectional area equal to 1 square inch were pushed in and grouted around. Finally the defective Portland stone casing was renewed in proper mason fashion and tied to the core with " Delta " metal cramps. You may look at the piers now and you will not detect the smallest sign of the laborious and delicate work which has been done to them. This slide shows the plan of injection holes and reinforcement rods at one level of a pier. There were five tiers of reinforcement in the Crypt piers and 13 in the piers above.

The piers were not yet done with. At Gallery level Wren had tied each pier to its bastion with four and a few feet higher up with two iron cramps. Electrical tests showed that these were broken ; they were cut out, a most critical operation, and replaced by " Staybrite " steel rods, two to each bastion, being 4 inches and two 3 inches in diameter with anchor plates at the ends.

The work to the piers was finished, and now the problem of what was to be done with the drum had to be solved—a far harder and subtler problem. It was dealt with in a way which compels my admiration at least. The relations of the inner and outer walls of the dome and of the radial buttressing system between them were investigated. Two

models were made to represent these in soft plaster, one model showing the system properly bonded together and so acting as a whole as Wren intended, the other showing the inner and outer walls independently. These models had loads put on them to represent the dome and superstructure which had to be carried. The experiment showed that while the bonded model sustained the work without damage, the unbonded model failed and was crushed. Nothing could have shown in a more striking way the absolute necessity of keeping the buttressing system intact and with perfect bond to the inner and outer walls of the drum. The bond was not perfect, and the Committee found the reason in two movements, one of which was due to the general settlement of the building during erection. This movement had caused cracks to appear in the drum walls and dislocation of the bond. It had stopped when the settling stopped, but the damage had not been put right satisfactorily. The Committee dealt with it by inserting a series of 48 ties starting below the Whispering Gallery, running diagonally across the space between the inner and outer walls, and finishing outside under the peristyle paving. They were 38 feet 6 inches long of "Staybrite" steel, 4 inches in diameter, with large steel washer plates at the ends. At the top and bottom of each of these, and independent of it, was a horizontal transverse tie-rod, $2\frac{1}{2}$ inches in diameter, also with washer plates at each end. The buttress walls were also repaired, grouted and reinforced, the reinforcement being carried through to the inner drum. Any fear of independent action of the two drums was thus abolished. Some of the buttresses, especially those resting on the bastions, were badly shattered.

But the other movement still continues, and will never stop ; it is a much more subtle one, and the Committee spared neither time nor labour in examining the records of their delicate instruments analysing and explaining it. This movement is seasonal, it is greatest in summer and least in winter ; moreover, the southern half of the drum is affected more than the northern, and that complicates matters. The

effect of it is to push the drum out and increase its diameter slowly, very slowly, but very surely. The minute displacement caused by expansion in summer does not get quite compensated by the winter cold, there is always, unless provided against—a very small residual displacement. Tindall discussed this point in one of his investigations as to the creeping of lead roof coverings, and showed it to be gravitational. It is these minute, unceasing, irresistible movements that are the real danger in any building. As Sir Charles Lyell pointed out long ago, the great cataclysmic forces of earthquake, lightning, storm and tempest do but little towards shaping out mountains and valleys, our plains and deserts, in comparison with the small invisible, inaudible forces working without rest and without haste through the ages. And so with buildings, they may escape earthquake, fire and flood, but they can never for the fraction of a second escape the ceaseless dance of the protons and electrons a million times too small for our microscopes, but which are the ultimate constituents of brick and stone, of wood and of iron.

Measurements across the dome space at the level of the Whispering Gallery showed that the north and south diameter was $6\frac{1}{4}$ inches greater than the east and west, and a southward movement was indicated. The annual maximum movement is about one-sixteenth of an inch. This goes back with the winter cold almost to starting point, but not quite by a minute fraction. The Committee knew that it would be useless, perhaps worse than useless, to attempt to restrain the natural movements resulting from temperature changes, but that the cumulative gravitational effect could and should be arrested. So they devised and carried out a system of metal hooping, consisting of two chain belts encircling the outer drum, the lower being partly let into the stone of the base wall. Each belt consists of alternate rows of three and four links, each of a sectional area of 24 inches and so of the same strength. They are bent to the curve of the drum, and have knuckle joints. For greater security they are cased with concrete. When the heat of the summer

lengthens the diameter of the dome towards the south, this band will equally expand; but there is no gravitational effect, for the winter cooling will contract it back to the original position and pull the drum with it.

And there for the present the work of the Committee stops and my story ends. It is one of things achieved, but it is not the whole story. That would be one of experiments, slowly accumulated knowledge, trials and errors, uncertainties, gropings in the dark until the light came and showed the road to take to those who knew how to take it.

Sir Christopher Wren's fame is assured ; his name will live. The noble fane he raised out of the ashes of the Great Fire is his memorial for all to see. The men whose six years' unremitting, unselfish and successful labours I have tried to describe covered up their own footprints as they went, and have left no visible trace behind. I do not know what steps will be taken, but trust that something may be done, and that some lasting record of their names for all to see may witness our gratitude for their services to City, Motherland, and Empire.

Transactions of The Chartered Surveyors' Institution

SESSION 1930-1931.

AT THE ORDINARY GENERAL MEETING

*Held at the Chartered Surveyors' Institution on Monday,
12th January, 1931.*

Mr. E. H. LEEDER (President) in the Chair.

NEW MEMBERS.

The following new Members were presented by the PRESIDENT for formal admission to membership under Bye-law 21, and signed the Register:—

Professional Associates :

ALLEN, BERNARD CLAUDE	KIMPTON, ERIC
BOOTH, COLIN BRIDGWOOD	KIRKBY, FRANCIS JOSEPH DARCH
EATON, LESLIE	LINNETT, RAYMOND FREDERICK
EVANS, ARTHUR CLIFFORD	MOORE, SEYMOUR HUMPHREY
BRISCOE	PORTER, JOHN HUGO
EVERETT, ALBERT LESLIE	SEYMOUR, KENNETH
FENNEY, OLIVER WILLIAM	SHEPHERD, CYRIL ALFRED
FRYETT, JAMES ERNEST CHARLES	SWEETING, FRANCIS HENRY
GREEN, FRANK STANLEY MORDEN	WADEY, WALTER JOSEPH
GROVER, NORMAN KENNETH	WILLIAMS, OWEN PASLEY DENNEY
HARBOUR, HARRY JOHN AUSTIN	WOOLF, CYRIL WILLIAM
JOB, THOMAS EDWARD	

A DISCUSSION took place on

St. Paul's.

Mr. C. H. BEDELLS (Past-President), in proposing the vote of thanks, remarked how little the members had heard in the course of the reading of the lecture of Mr. Drower's own part in the operations which had been described. Even reading between the lines they had only an inkling of the fact that from 1914 to 1921 and onwards Mr. Drower had been concerned in those patient calculations upon the accuracy of which had depended to such an extent the success of the work which had made St. Paul's safe for generations to come. For instance, Mr. Drower in his lecture had merely stated that the weight of the lantern on the dome was 847 tons ; and somebody had had to estimate the weight of that lantern.

Mr. Drower had estimated to a nicety, not only the weight of the Cathedral, but also to apportion that weight amongst the various component parts of the structure. The 67,270 tons, which was the total weight, metaphorically speaking, rested upon the shoulders of Mr. Drower.

If, however, the lecture was silent upon Mr. Drower's achievement, the report of the Commission was not, because it expressed agreement with the results of his work.

They of the surveyors' profession had a very considerable interest in the proceedings of that evening. Sir Christopher Wren himself was a surveyor. The late Sir David Burnett (Fellow) had been Lord Mayor when the first appeal for £70,000 had been launched by Canon Alexander (who was present), and had lent the weight of his influence towards the securing of the necessary funds. Then there was Mr. John Todd, who had staked his reputation on the allegation that St. Paul's was a " dangerous structure," and at whose instance the dangerous structure notice was served.

Canon Alexander had described that document as being

an "astonishing" one, as if, forsooth, the Dean and Chapter had not been considering for years past, with the aid of the most highly instructed opinion obtainable, how they should discharge the duty and responsibility which they owed to the community at large for the care of the building. Notwithstanding that criticism, he (Mr. Bedells) suggested that the service of the dangerous structure notice had put more money into the pockets of the Canon than any appeal that could possibly have been invented would have been likely to do.

Mr. Todd considered the problem was such a serious one that there was no alternative but to pull down both the dome and the piers on which it rested, begin again from the foundations, 40 feet below the level of the ground, and build up the whole edifice anew, at an estimated cost of at least two million pounds, and the time to take twelve years. They might well hope, after what they had heard and seen that night, that the work of restoration had proved Mr. Todd's opinion erroneous, and that a subtle and difficult problem had been solved without the more drastic measures suggested at that time.

Now that anxiety was relieved, one was entitled to look back upon the proceedings as a source almost of merriment, because supposing the Dean and Chapter had disobeyed the responsible authority, what would have happened? The Corporation of the City of London would have been responsible to see that the safety of the public was assured. As he had said, there were those who had stated that the only means of dealing with the trouble with regard to the dome was to deal with it from the inside; but, on the other hand, he had read that there were those who had stated that the Corporation, in the exercise of their powers under a dangerous structure notice, had no right to approach the problem except from the outside. And how would they be able to support the dome from the outside? And, moreover, supposing the Corporation had assumed the responsibility, how would the bill have been paid? Under the London Building Act the remedy in the hands of the London County Council, or the Corporation of

the City of London, in the event of a building becoming dangerous and being attended to by the responsible authority, was a power to sell the building. He thought that the idea of a sale of St. Paul's Cathedral by the Corporation of the City of London was not without its humorous aspect.

Another interesting point illustrated was that of the conflict between the requirements of the district surveyor and the extent of the public purse. In similar circumstances, but of lesser magnitude, members often had some difficulty in reconciling the district surveyor's wish that they should, as it were, build for posterity and their client's desire to do the minimum repairs for quite a limited period of stability.

The profession congratulated Mr. Drower most heartily on the part he had played in the work of restoration. Mr. Drower had said that when, in the history of our country difficulty had arisen, there had generally been a man at hand to tackle it ; and in the present case Mr. Drower's professional ability and his work had been adequate to the occasion. Mr. Drower had suggested that those who had covered over their footsteps as they had proceeded with the work should have some memorial. If so, Mr. Drower should be included therein. But, at all events, his memorial was enshrined in the *Transactions* of The Institution, and that was an honour which most members appreciated very highly.

He asked those present to accord a very hearty vote of thanks to Mr. Drower for his Paper, and to those who had assisted him, and to congratulate him on the opportunity which had been his of rendering a service to the nation as well as to all those visitors from overseas who came to London to see and enjoy the beauties of St. Paul's, to learn something of its history, and, it was to be hoped, something from its traditions.

Mr. H. MORDAUNT ROGERS (Fellow), in seconding the vote of thanks, said he had no great academic knowledge of cathedrals, but he had visited in the course of his life

nearly all the cathedrals and great churches of England, Wales, and Scotland. He had been as far north as Kirk-wall in the Orkneys, and had visited the cathedral there ; he had seen over thirty great cathedrals, and numberless churches in France ; he knew Beauvais intimately, and he had been to Sens, on which Canterbury Cathedral was modelled. He had also visited most of the big churches in Northern Italy. Therefore, while he had no academic knowledge of the construction of great churches and cathedrals, he had had the experience of having visited a very large number.

The extraordinary harmony of the situation, and the buildings, had often struck him in regard to many cathedrals. Norman buildings, which lay low, seemed to him to have low arches, while those that stood high had high arches, as would be seen by comparing Romsey Abbey with Durham Cathedral, or even with St. Bartholomew's Church in London. He had been particularly struck by that feature in the French churches of Vezelay and Laon, and Semur. The church of Vezelay was a masterpiece, standing on a tremendous hill. The whole village was built on a hill, and one circled up and up until one got to the church. He thought he was right in saying that the nave was nearly 80 feet high. He had noticed in the church of Semur, which also stood particularly high, that, although the nave was high, the width was narrow, and, consequently, the height seemed greater in proportion.

He had often wondered whether the great architects of the past had had anything in mind when they had built those great cathedrals to get the sense of height. He felt that the Gothic had been inspired by religious feeling—the higher they could get, the higher they were towards heaven. When he had been at Durham several years ago, he had noticed the intersecting of arcades on one of the walls, and he had said to the verger, a very old man, " I have been told that that intersecting of arcades inspired " the pointed arch." The verger had been highly indignant, and had said that that was an idea which had been exploded long since. He (Mr. Rogers) had gone away

feeling rather small, but he had thought things over since, and considered that, perhaps, after all, the pointed arch was the result of the Gothic religious feeling pointing heavenwards. One often thought what would happen if one pulled down a Norman cathedral and put a Gothic one in its place, and if one pulled down St. Paul's Cathedral what one would put there. That reminded him of Addison's allegorical story in the *Spectator*, of how people with particular deformities went to a certain heap, put down their deformities, and brought away the deformities of other people. There was the gentleman with a hunch back ; there was the gentleman with bow legs ; there was the gentleman with very tall thin legs ; there was the gentleman with a fat face, and there was the gentleman with a thin face. They came away each with an opposite defect, which they thought would improve their appearance. When the hunchback got on to the spindle legs he felt very much like a man on stilts, and the man with the broad face who had taken a long and narrow one felt very uncomfortable, because when he tried to touch his forehead he found he hit his nose. So in the end they all went back to the heap and took back their original deformities.

The only cathedral which occurred to him as being out of place was that of Milan, the busiest town of Northern Italy. It was altogether too ornamental. There were numberless pinnacles and 2,000 statues on the exterior of the cathedral. With regard to St. Paul's it did seem a most fitting and extraordinary apt building for the greatest business city of the world.

He had spoken of Gothic aiming at heaven, and that probably was what had caused the old architects to build the high steeples they did. Mr. Drower had shown a slide of the steeple of old St. Paul's which he believed was 460 feet in height. The great French architect of the sixteenth century, Jean Vast, had tried to beat that, and had erected a steeple at Beauvais Cathedral nearly 500 feet in height. Some thirty years afterwards his son had put an iron cross on the top. After four years the structure had collapsed. Had there been a nave, possibly

it might have acted as a buttress, and prevented the great spire from falling. It was a tower built up of three lanterns, tier upon tier, and crowned by a wooden spire, which almost entirely collapsed. A small portion was left standing in a very dangerous condition, and neither mason nor workman nor engineer nor architect would go up and pull that dangerous structure down. The people then hit upon a bright idea. There was a certain criminal who had been condemned to death, so they offered him his freedom if he would go up and bring it down. The story goes that the man did so, and thus regained his liberty and life.

He would like to mention the wonderful lantern in Coutances Cathedral in Normandy. Vauban, the great engineering architect, the man who had fortified most of the towns of France, and who had died somewhere about 1707, said of the lantern of Coutances Cathedral: "Who is the 'sublime madman who dared to launch such a monument in the air?'" He (Mr. Rogers) thought that if he had seen Wren's masterpiece he would equally have been staggered by it.

This was the kind of Paper which very much appealed to him, and, perhaps, he had rather wandered from the subject in mentioning other cathedrals, and Gothic and Norman architecture. It was delightful for a Member of the Council to have given the members such an entertaining evening.

Canon S. A. ALEXANDER (Visitor) said he felt that he ought to express, on behalf of the Dean and Chapter, their great gratitude to Mr. Drower for what he had done for the Cathedral at the beginning of the work.

The lecture had revived a great many memories in his mind—some pleasant and some painful. He had had to do with a good many strange creatures during the work. He did not mean to include Mr. Drower among them, but there had been those who, when the piers had been scaffolded during the War, had thought that those piers contained convalescent homes for wounded soldiers and desired to visit them. There had been the Americans who had sug-

gested all sorts of curious ideas for the work on the foundations ; and they had been quite prepared to carry away the whole Cathedral in a wheelbarrow and set it up in New York. Again, there had been the old ladies who had come and poked their parasols at the western front on the weather-beaten columns outside the building, where there had never been any danger whatever, asking if it was safe to enter the building. Then there had been Mr. John Todd. He would not say very much about Mr. John Todd, as he had passed away, but he could not help reflecting that Mr. Todd had served his dangerous structure notice upon him at a very inopportune moment when he was enjoying his luncheon on Christmas Eve.

Mr. Drower's great modesty, to which the mover of the vote of thanks had so truly referred, had rather obscured the great length of time the work had taken. It had been begun in the year 1913. It had taken $17\frac{1}{2}$ years to accomplish—just half the time the cathedral took in the original building—and never for a day had that work been laid aside. They had started with a fund of £70,000 just before the War. That had been followed up by another appeal in 1922, and finally there had been the *Times* appeal in 1925. Altogether a sum of £400,000 had been raised from all parts of the Empire. He considered that that was a great tribute to the wonderful influence of St. Paul's throughout the British possessions.

That building—that great national Cathedral—had been made as safe as human skill and enterprise could make it. Those concerned had been told by their engineers and architects that it was secure for many centuries to come. But there was one thing which had to be remembered, and which he asked the meeting to bear in mind. The foundations were only $4\frac{1}{2}$ feet below the level of the Crypt floor, and they rested upon a bed of wet sand. If that sand was disturbed, and drawn off by excavations in the neighbourhood of the Cathedral, then all the labour and all the money which had been expended hitherto would be of no avail. They were at the moment in negotiation with the Corporation of London and with the Ecclesiastical

Commissioners to provide some scheme of defending the foundations of the building by an area drawn round it within which no excavations would be permitted within a certain limit. He wanted those present to remember that at the moment those concerned with the Cathedral had no protection by law against anybody undermining the foundations and practically bringing down the building. They were hoping, with the assistance of the Corporation of London (who had been very encouraging) to secure a real defence—a real line of safety for the building, so that the work which had been done would be really final and complete.

He asked the meeting, if the occasion should arise, to remember the need of St. Paul's ; and, knowing the interest which the members of The Institution took in the matter, he felt confident that they would use their influence in seeing that the building was defended against encroachments in its vicinity, thereby keeping it secure, and making it more and more the true centre of the life and worship of our race through the centuries to come.

Mr. H. E. GILLET said that he did not feel qualified to say anything on the extraordinary able work of renovation and restoration of the Cathedral, but he would like to take the members back to the 17th century, when the Cathedral was built. Mr. Drower in the early part of his lecture had asked: "Who was there who could design a new church "worthy of the site," and he went on to say "The "occasion brought forth the man." As a matter of fact it might be said that the man was there waiting for the occasion which the Great Fire of London providentially placed in his grasp, because only a short time before the outbreak of the fire people had been perturbed about the bad state of repair of the Cathedral which was "asking for "a dangerous structure notice." Sir Christopher Wren had been commissioned by Charles II. to make a survey and report on the structural condition of the Cathedral at that time, and he (the speaker) would like to read a few words from Wren's report: "I cannot propose a better

“remedy than by cutting off the inner columns of the
“cross to reduce the middle part into a spacious dome or
“rotunda with a cupola or hemispherical roof, and upon
“the cupola (for the outward ornament) a lantern with a
“spring top to rise proportionally.”

There one had a picture of the most famous feature of the Cathedral as it was known to-day, drawn before the Great Fire. Besides producing a complete town planning scheme for London within six days of the ending of the fire, Wren had ready the design of the new Cathedral. There were many quibbles about the matter, chiefly between the Rebuilding Commissioners themselves and Sir Christopher Wren, which caused a tremendous amount of difficulty to him, and probably extended the period of the work. Not only that, but it had a financial effect on Wren himself, with which he (the speaker) was sure all the members would sympathise. Wren's salary for the rebuilding of the Cathedral was £200 a year—an amount identical with the remuneration paid to the foreman carpenter, with the distinction that Wren's salary was, by Act of Parliament, to be paid in two moieties—the last being due when the work was finished. Owing to various differences of opinion as to architecture and materials, the Commissioners appeared to have postponed, as far as they could, the completion of the work. As a matter of fact Wren, on two occasions, petitioned Parliament and the reigning Sovereign for a further payment on account of his fees.

He did not know whether the members had given any thought to the cost of the original building, and how the money had been raised. He noticed that *Whitaker* said that the total cost had been £747,660. He had found a contemporary account, dated September, 1696 (which was getting near the end of the work), which showed that up to then £309,938 6s. 10½d. had been spent. Of that amount, £64,590 had been raised by private subscriptions, but most of the money had been raised by a coal tax, an imposition on seaborne coal imported into London of 4d. per chaldron at first, and afterwards raised to 1s. 6d. That tax had only been repealed by Lord Randolph Churchill when he was

Chancellor of the Exchequer. There were many other intriguing details which he had not the time to mention; for instance, that of removing the labour difficulty which arose from the fact that before the Great Fire nobody was allowed to work in London who was not a freeman.

He desired, in conclusion, to say how very much he had enjoyed the remarkably interesting and well-illustrated lecture.

The PRESIDENT, in putting the vote of thanks to the meeting, thanked Mr. Drower most heartily for the lecture he had given. He also wished to congratulate Mr. Drower as a Member of the Council of The Surveyors' Institution upon the part he had taken in the restoration of one of the national memorials of this country, which had had the effect of preserving the Cathedral for the present generation, and, he hoped, for a very large number of generations in the future.

The vote of thanks was carried by acclamation.

Mr. DROWER, in reply, said that the task of returning thanks was more difficult than measuring and weighing St. Paul's. He thought a little too much had been made of the part he had played. It had been, after all, but a humdrum part, but it had required a good deal of care, and also a little knowledge of construction, but very little else. He would say, however, that as he had gone on crawling into voids examining this buttress and that buttress, seeing how one thing supported another, and seeing how the whole thing was constructed, his admiration for St. Paul's Cathedral had grown from day to day. A little fault could be found with the method of building—the masonry, and so forth—but, perhaps, that was not Wren's fault. What the relations had been at that time of the architect to a building, or of the master mason to a building, as opposed to the architect, he did not know; but he did not think that an architect in those days had the same responsibility for the building, or had the same duties to

perform as the architect of to-day. What he had noticed especially had been Wren's economy of material. As far as Portland stone was concerned, perhaps Wren economised too much, but Portland stone had not been easy to get in those days. It had to come round by little barges all the way from Portland, and in the winter the Channel was almost un-navigable for those vessels, so that he supposed very little came down to St. Paul's in the winter. If one went to Hampton Court and looked at the jointing of the stone in the Cæsar's Court one would find that Wren's mason had used up every piece that he could. The jointing was amazing ; it would never pass in these days. If the mason had an L-shaped piece of stone he did not cut off the nib of the L, but he used it and put in a little bit of stone to make up for it, and so on.

As to the distribution of weight, while he had been measuring, he had thought he would like to see how the domes were constructed by the great French architects, and so he had gone over to Paris, and he had not found a single one so scientifically constructed as that of St. Paul's, and not one which answered its purpose so admirably. There was not one without cracks and defects. The buttressing system of the dome of the Pantheon was fantastic compared to the simplicity of St. Paul's.

One thing was certain—that, subject to those precautions which Canon Alexander had said must be taken being taken, there was no doubt whatever that St. Paul's was as safe as any building in the world.

In mentioning those who were especially entitled to gratitude for their work in connection with the restoration of St. Paul's he made one regrettable omission—that of the name of Lieut.-Colonel Sankey. That gentleman was responsible for superintending and carrying out of the work ; his vigilance never slackened ; no operation was too small or too big for him to note and watch ; and one could congratulate him upon the success of his six years' labour.

PAPER 531.

CLAIMS FOR COMPENSATION UNDER THE PUBLIC HEALTH AND ROADS IMPROVE- MENT ACTS, 1925.

By Christopher Chart (Member of Council).

*To be read at the Ordinary General Meeting of The
Chartered Surveyors' Institution on Monday, 9th
February, 1931.*

While it is always difficult to view in true perspective the movements of the age in which we live, it is generally agreed that the post-war years have been marked by increased efforts to make provision for the future, and, so far as can be foreseen, to prevent a repetition of the mistakes of the past.

Town planning, which in pre-war days was "permissive" by the operation of Section 46 of the Housing, Town Planning, &c., Act, 1919, became compulsory on 1st January, 1923, in all boroughs and urban districts with a population exceeding 20,000, and the preparation of town planning schemes has not been limited to these more populous areas.

In the Circular dated 30th March, 1921, issued by the Minister of Health to town councils drawing attention to the provisions of the 1919 Act as regards compulsory town planning, stress is laid on the avoidance of "the waste" which has been the result of the haphazard growth of towns in the past; and therefore, in conformity with the measures which are now being taken for economy, wise action is necessary as regards town planning." And—it continues—"the gains of proper town planning are great—by providing betimes for proper roads and other communications, and thus avoiding the later necessity of costly street improvements."

Town planning schemes are, however, limited to land

which is in course of development, or appears likely to be used for building purposes, and not to built-up areas, and it is in areas such as these that the provisions of the Roads Improvement Act and Public Health Act, 1925, are likely to prove most useful in avoiding the later necessity of costly street improvements if the future needs of traffic facilities can be accurately foreseen.

The need for new and wider roads has been evident with the perfection of the internal combustion engine, and the improvements in all the details that go to make up the modern mechanically propelled road vehicle. The re-development of town sites adds to the heavy burden of traffic which the roads are called upon to bear. It has been estimated that, if an ordinary residential site in London is re-developed, it may be possible under the London Building Act to erect a commercial building which will occupy six times the cubic space, and will increase the traffic by eight to ten times the volume.

Before proceeding to discuss the principal subject of this Paper, it may be useful to outline, very briefly, some of the powers conferred on local authorities under previous Acts for the improvement and widening of roads, and the prescription of building lines.

The Public Health Act, 1875.—Section 154 authorises the purchase by an urban authority of any premises for the purpose of widening or otherwise improving any street. Section 155 gives an urban authority power to prescribe the line in which any house or building which has been taken down shall be re-erected, and provides for payment of compensation for damage sustained by reason of the house or building being set back or forward.

The Public Health (Buildings in Streets) Act, 1888, repealing a defective section of the 1875 Act, and amending and re-enacting it, prohibits the erection or bringing forward of any house or building in any street beyond the main front wall of the house or building on either side in the same street without the written consent of the urban

authority, and is frequently quoted as prescribing a building line which is not strictly accurate as it only applies where buildings already exist, and then not to the general line of buildings in the street, but to those on either side of the new building proposed.

The Town Planning Act, 1925, which consolidates the enactments relating to town planning, authorises the preparation or adoption of town planning schemes which, when approved by the Minister, have effect as if enacted by the Act. A town planning scheme may, and in fact generally does, provide for the future construction of entirely new roads and for the improvement and widening of existing streets and the prescription of building lines.

Power is given to the responsible authority to enforce and to purchase land for the purposes of the scheme, and provision is made for payment of compensation.

The sections relating to compensation are too long to quote in full, but, briefly, compensation is payable for injurious affection by the making of the scheme, except by provisions as to density or character zoning, and betterment to the extent of one-half the increased value is recoverable by the responsible authority from benefiting owners.

The Development and Road Improvement Funds Act, 1909, set up the Road Board (whose powers were subsequently transferred to the Ministry of Transport) and invested them with certain powers for the "improvement of "roads," which expression includes the widening of any road and the cutting off of any corners of any road where land is required to be purchased for that purpose, levelling, treatment for mitigating the nuisance of dust and other works beyond ordinary repairs ; and this definition is enlarged by Section 2 of the Roads Improvement Act, 1925, to include the planting of trees, the laying out of grass margins, the placing of milestones and sign-posts, and the prescription of building lines.

Under Section 8 of this Act advances may be made to highway authorities for the construction of new roads or the improvement of existing roads.

Section 11 (3) authorises the acquisition of land for the improvement of existing roads by highway authorities to which such advances are made, and Sub-section (5) provides the machinery for compulsory purchase where acquisition by agreement on reasonable terms proves impracticable.

Having thus cleared the ground, let us turn to the two Acts indicated in the title of this Paper as those under which claims for compensation may arise.

The Roads Improvement Act, 1925.

The authorities for putting in force the provisions of this Act are the Minister of Transport, the county council, or any other highway authority. Section 1 authorises the planting of trees and laying of grass margins in highways. Section 2 enlarges the expression "improvement of roads" in the 1909 Act (see *ante*). Section 3 authorises the acquisition of land to be given in exchange for parts of common land, &c., required for road improvements. Section 4 provides the machinery for the prevention of obstructions to view at blind corners, and under it walls (not being part of the structure of a permanent edifice), fences and hedges may be compulsorily reduced in height with a provision for payment of compensation.

Section 5 deals with the prescription of building lines by the county council, or other highway authority in relation to either side of a highway maintainable by them; the Minister of Transport may require to be notified of the proposal before any line is prescribed on a classified road; notice must be given to every owner, occupier and lessee of land affected by the line, and objections made within six weeks considered, and a further notice given after the prescription, and in Sub-section (5) comes the provision for the payment of compensation:—

"Any person who proves that his property is injuriously affected by the prescription of a building line shall . . . be entitled to recover . . . compensation for the injury sustained. . . ."

Failing agreement, the compensation payable is to be de-

terminated by an official arbitrator appointed under the Acquisition of Land (Assessment of Compensation) Act, 1919, and in determining any such question "there shall be taken into account any benefit accruing to the person to whom compensation is payable by reason of any improvement made or about to be made to the highway."

Sub-section (7) says that the powers conferred by this section are to be additional to those conferred by any other Act, but prohibits the exercise of them, except with the consent of the Minister of Health, when the land is included in a town planning scheme.

The Public Health Act, 1925,

is an adoptive Act, *i.e.*, its provisions only apply in those districts when the local authority are empowered by the Act to adopt the provisions, and have, in fact, done so.

Both urban and rural authorities can adopt Section 33, which is the one relating to the prescription of improvement lines for widening streets, and by Section 34 the powers conferred on local authorities by Section 33 may be exercised by the county council as respects any main road maintained by the county council, who are to consult the local authority before preparing their improvement plan.

Section 33 empowers the local authority to prescribe an improvement line in any street repairable by the inhabitants at large which is (a) narrow, or inconvenient, or without a sufficiently regular boundary line, or (b) necessary or desirable to be widened. Provision is made for notices to owners and occupiers, and consideration of objections before the line is finally fixed, much as in the case of a building line under the Roads Improvement Act; but in this case it would appear that no further notice need be given to owners or occupiers who can find out only by enquiry and inspection of maps whether an improvement line to which they have objected has been by resolution finally prescribed.

By Sub-section (6): "Any person whose property is injuriously affected by the prescribing of an improvement

“ line shall be entitled to obtain compensation in respect of such injurious affection from the local authority.”

Failing agreement, compensation is to be determined by arbitration in accordance with the provisions of the Acquisition of Land (Assessment of Compensation) Act, 1919, Sub-section (7).

By Sub-section (8): “ The local authority may purchase any land not occupied by buildings lying between the improvement line and the boundary of the street,” and this purchase is to be in accordance with the provisions of the Lands Clauses Acts.

By Sub-section (10): “ In the assessment of compensation for injurious affection, or in respect of a purchase of land, . . . the benefits accruing to the person to whom the same shall be payable by reason of the widening or improvement of the street shall be fairly estimated and set off against the compensation.”

At first sight it seems curious that two measures in the same Session, both receiving Royal Assent on the same day, should be necessary to deal with such similar matters as building lines and improvement lines; doubtless the exigencies of Parliamentary time accounts for it in some measure. A third Bill, “ Abolition of Blind Corners,” was jettisoned in the same Session, but another explanation is that the financial burden is differently distributed according to the Act under which action is taken.

Following this outline of the provisions of the Acts under consideration, we reach the question of *Claims for Compensation*. It will have been noted that under both Acts the right arises on the prescribing of the line (without regard to whether the damage has actually materialised or is only prospective), and it should be further noted that under the Roads Improvement Act the time for making a claim is limited to six months after prescription or service of the final notice thereof.

As a general proposition, any bar which restricts or limits the use which an owner may make of his property diminishes its value to him. Does it follow as a natural consequence that the prescription of a building or improve-

ment line must in all cases diminish values of the property to which they apply? Not, I think, in every case, for while there are undoubtedly properties which would suffer considerably by the imposition of such restrictions, there are others which the owners voluntarily restrict in this manner, frequently on the advice of members of this Chartered Institution.

Look at the particulars of sale of any building estates, and in a very large percentage it will be found that not only is a building line prescribed to which the purchaser must conform, but there are not infrequently restrictive covenants as to the use which may be made of the land, the types of buildings which may be erected, and in the case of dwelling-houses a minimum value. These restrictions are imposed by the owner as being, so far as he can judge at the time, for the mutual protection of every purchaser, who, while his own use of his purchase is limited, is thereby ensured against loss of amenities by the acts of his neighbour. I say advisedly "so far as he can judge at the "time," because it has been the experience of many of us to find that development has not taken place on the lines anticipated by the original framers of the restrictions, and that another sphere of activity has opened for the Chartered Surveyor in giving evidence before the official arbitrators on applications under Section 84 of the Law of Property Act for the removal or variation of restrictions that have become obsolete or onerous.

That mutual restrictions voluntarily imposed may balance the limitation of free use is evident. Carry the argument a little further and substitute "outweigh" for "balance," and we have a foundation for the thorny question of "betterment," and it must not be overlooked that both the Acts, which are under consideration, provide for betterment by way of set-off against compensation for injurious affection.

The question of betterment is always difficult of proof, and as regards building and improvement lines can, I think, only be fairly applied to the comparatively smaller properties where the advantage of the restriction applied

to adjacent properties renders it mutually advantageous. On a long stretch of frontage in one ownership it is difficult to see how any betterment could result from the prescription of building or improvement lines, for any benefit of such restrictions is inherent in the ownership of the property itself. If it is really beneficial, the owner can himself observe or prescribe it without any action of the local authority.

Apart from such questions as may arise in connection with counterclaims for betterment, the preparation or settlement of a claim does not seem to present any difficulties which are outside the ordinary practice of the Chartered Surveyors' profession: knowledge of values, some imagination and skill in foreseeing probable developments, and estimating their effect on values, are necessary for any surveyor undertaking valuation work. There can be no rule-of-thumb method applicable to these particular cases—each must be considered on its merits,—and if any sort of formula is to be suggested for arriving at the amount (if any) of a claim it would be this: the compensation payable equals the value of the claimant's interest before the imposition of the bar minus the value after the imposition. The two valuations that have to be made to fit this formula are simple, straightforward, and in accordance with familiar practice, introduce no hypothetical considerations, and, incidentally, cover the question of betterment also.

There have, of course, been a number of cases in which building and improvement lines have been prescribed, claims made, and in some cases settled; a report of the two first cases under Section 5 (5) of the Roads Improvement Act, 1925, coming before Mr. Hugh C. Webster, official arbitrator, on 2nd February, 1927, will be found in the *Journal*, Vol. VI., p. 618, and were cases in which the contour of the land—a cliff at the rear—prevented the erection of buildings behind the building line.

Where the property to which the prescribed line applies is undeveloped land there appear to be three headings under which the cases may be grouped: (1) Those in which owing to the extent and depth of the property the only point to be considered is the sterilisation for building pur-

poses of the area in front of the prescribed line ; (2) Those in which owing to shallow depth of site the prescribed line may necessitate greater frontage being given to buildings to obtain sufficient floor space and area in the rear, or, in extreme cases, may entirely prevent the use of the unrestricted land for building ; and (3) Those in which the contours of the site are such that in addition to sterilisation of land in front of the prescribed line, building behind it is made more costly and access more difficult, or in which, as in the case of the cliff at the rear, building may be quite impossible.

Where the property is already developed, similar considerations apply, but complicated by the presence of the buildings and by where the line comes in relation to them ; private residences on ample level-sites may suffer no measurable damage by the prescription of a building line in front of them, but the damage might be considerable if the houses were suitable and ripe for conversion into shops by building out over the forecourts.

Again, where the new line cuts through existing buildings, consideration has to be given to the time that is likely to elapse before re-development becomes necessary, and it is in cases of this sort that there is the greatest difficulty and most room for difference of opinion between valuers. Where a substantial commercial building has been recently erected somewhat in excess of to-day's needs and likely to stand to the end of the century, the owner can view with comparative equanimity a building line cutting through the building which is only likely to prove effective some years ahead unless some catastrophe such as a fire occurred. At the same time a growing neighbourhood may see re-development occurring earlier than might have been anticipated. I have in mind a newly built suburban shop on a corner site which in less than thirty years was acquired and demolished by a bank who found a line prescribed immediately it became known that reconstruction was imminent.

Further examples could be quoted, but enough has, I think, been said to give a general indication of the types of cases most usually met with.

I have omitted to point out that there may be an improvement line prescribed for a street under the Public Health Act, and at the same time, for the same street and on the same side of it, a building line either under the provisions of the Roads Improvement Act or of a town planning scheme.

I have hitherto dealt with the question of claims for compensation on the prescription of building or improvement lines as being practically identical, but this is not, in fact, quite the case.

After a building line is prescribed, the owner may still erect a boundary wall or fence, but he may not build or permanently excavate in front of the line without consent. (Roads Improvement Act, 1925, Section 5 (3).)

After an improvement line is prescribed, no erection or excavation may be made without consent (Section 33 (5)), the Act apparently contemplating that the land between the improvement line and the street will be acquired in accordance with Sub-section (8), which, in a residential area, may necessitate future houses being set back behind the improvement line so that when the street is widened they are sufficiently set back from it. As mentioned in the preliminary summary of the provisions of this section, it would appear that if the local authority decide to purchase immediately on the improvement line being prescribed, and negotiations fail to arrive at agreement as to the amount of compensation and purchase money, it might be necessary to hold two separate and distinct arbitrations to get the matter settled, though it would appear that Section 1 (1) of the Acquisition of Land Act, 1919, would bring the compulsory purchase of land in front of the improvement line by the local authority within the scope of that measure equally with the assessment of compensation for prescription of the line which is stated in the Public Health Act to be dealt with under that Act.

So far as I have been able to ascertain, there have been no cases before the High Courts to which it is necessary to refer as elucidating some principle laid down by the Acts with regard to building and improvement lines, with the

exception of one case reported in the " Weekly Notes " of 6th December, *Sittingbourne U.D.C. v. Lipton, Limited*. This was a case in which the shop front on the ground floor had been set back leaving a forecourt in front over which the upper stories of the building projected, carried by side walls and iron columns ; and after an improvement line had been prescribed, the owners proceeded to reinstate the shop front to its original position, *i.e.*, to the line of the upper stories, contending that this was not an " erection " within Section 33 (5) of the Public Health Act, 1925, as the land was already occupied by buildings. The Court decided in favour of the local authority, holding that inasmuch as the object of the section was to facilitate the widening of streets, and that what had been done would impose a greater burden on the local authority in the event of acquisition, the addition made was an " erection " within the section.

While not strictly germane to a Paper dealing with claims to compensation, one can hardly draw attention to the provisions of Section 33 of the Public Health Act, 1925, for securing the future widening of streets without also referring to the three preceding sections which confer additional powers on local authorities to secure future widening of existing streets on development without compensation.

Prior to 1903 it was the general view, based on a series of legal decisions, that the erection of buildings on an old highway would, if sufficiently extensive, constitute the " laying out of a new street " within the meaning of the bye-laws, and necessitate a widening to bye-law width ; but in that year the decision of the Court of Appeal in *Devonport v. Tozer* disposed of that view which the Public Health Act, 1925, seems to restore.

Under Section 30. (1) When it appears to a local authority that an existing highway will be converted into a new street as a consequence of building operations which have been or are likely to be undertaken, the local authority may, by order, declare such highway to be a new street for the purpose of the application thereto of their bye-laws with respect to the width of new streets. (2) Notice must

be given a month previously, posted at the ends of the street. (3) Appeal by persons aggrieved may be made to Quarter Sessions ; and (4), on the order becoming operative, any person commencing to build shall be deemed, in relation to the land built on, to be laying out a new street within the meaning of the bye-laws.

By Section 31 new streets may, under certain conditions, be required to be of greater than bye-law width, and only if the excess width is greater than 20 feet does any compensation become payable, though the cost of the street works to be executed by the owner is limited to that of a street of bye-law width.

Section 32 provides that when development is proceeding on one side only, the local authority may prescribe that the width of the new street shall be set out as from the centre line of the existing highway ; but this is entirely within the discretion of the local authority, and, if not adopted, the whole burden of widening may fall upon the owner on the one side who happens to build first.

What the ultimate effect of these provisions will be remains to be seen. Bye-laws as to new streets do not, as a general rule, provide for anything more in the way of construction than what we know as a builder's road. At a later stage a private street can be made up under the provisions of the Private Streets Works Act, 1892 (or of Section 150 of the Public Health Act, 1875), but it is by no means clear that the added width to a highway already repairable by the inhabitants at large can be brought within the provisions of those Acts.

From all I hear the questions arising in connection with the application of Sections 30 to 32 are more difficult, and require more consideration than those arising on prescribed lines.

In conclusion I must apologise for so much of this Paper being a repetition of an article on the same subject which I contributed to the *Journal* for June, 1927, and thank those members of The Institution who, by their comments on that effort, have enabled me to present to you what is, I hope, a more useful contribution.

Transactions of The Chartered Surveyors' Institution

SESSION 1930-1931.

AT THE ORDINARY GENERAL MEETING

*Held at the Chartered Surveyors' Institution on Monday,
9th February, 1931.*

Mr. E. H. LEEDER (President) in the Chair.

NEW MEMBERS.

The following new Members were presented by the PRESIDENT for formal admission to membership under Byelaw 21, and signed the Register:—

Fellow :

WILTON, JOHN WILLIAM.

Professional Associates :

BACON, WILLIAM EDMUND
WITHERS

BARRELL, ALBERT HERBERT
BEESLEY, WILLIAM HENRY
BENNETT, ALBERT GEORGE
BEILBY

CASTLETON, JOHN WILLIAM
SAMUEL

CREWE, DOROTHY GARNETT
(Miss)

DOWSETT, HERBERT LANGDON
GARDENER, LIONEL DALLAS
STUART

HILL, ROBERT JOHN COOPER
KIRK, CLARENCE
MACLEAN, THOMAS

Professional Associates—(continued) :

PAYNE, WILLIAM CHARLES	TATTERSALL, LAWRENCE
PEAKE, HILTON EDWARD	TUCKER, HERBERT GEORGE
PRESTON, FREDERICK ALEXANDER	TUNALEY, HAROLD FREDERICK
HALKERSTON	VALENTINE, MARTIN ARTHUR
PULLEN, JOHN MONTAGUE	JOSEPH
RILEY, HORACE	WOODLAND, ERNEST OWEN

A DISCUSSION took place on Mr. CHRISTOPHER CHART'S
Paper entitled

**Claims for Compensation under the Public Health
and Roads Improvement Acts, 1925.**

Mr. J. E. BIDWELL (Senior Vice-President) said it gave him great pleasure to move a vote of thanks to his friend Mr. Chart for the excellent Paper he had presented. Mr. Chart had had much experience of the Acts in operation, and the speaker would like to have his views on one or two cases that had arisen in practice.

First of all he wished to refer to a difficulty which arose in the case of undeveloped land where a building line was prescribed without provision for road widening. The effect was to sterilise in perpetuity an amount of land which would really prohibit the use of a set-back frontage for any commercial purpose on account of the distance it was set back from the traffic. The case he had in mind was an estate in a country district where recently the county council had served notice in the case of some twelve or more main-road corners, restricting to the extent of a triangle 80 yards in each direction, *i.e.*, a triangle with a hypotenuse of 80 yards, 240 feet, in each direction, and it would be realised that that meant affecting a very considerable area at the corner. Not only would building be prohibited in that sterilised area, but no heightening of the existing fences

(and the present fences were only about 4 feet in height) was permissible without the consent of the authority. In such a situation he thought it was obvious that without any land being thrown into the road, and the road being widened, it would have the effect of leaving a large area of waste land unsightly and damaging to any possible future development for building.

It did not really matter whether, as in the case he had in mind, there was ample depth of land behind the prescribed line. Nevertheless, there was serious consequential damage in addition to the actual loss of land. Incidentally one might say—and Mr. Chart had referred to it in his Paper—that one of the objects of the Roads Improvement Act was to deal with problems that arose in these days of fast-moving traffic and motor traffic generally, but he thought it was very much open to question if such an extended line of vision as the one to which he had referred would really conduce to safety in present conditions.

The other case to which he wished to refer was under the Town Planning Act of 1925. In that case the authority, having planned an arterial or by-pass road, proposed to construct that road of a width of 66 feet through property which was not otherwise served by existing roads, *i.e.*, back land, but where a joint scheme for private development had been agreed with an adjoining owner who possessed means of access. Betterment was claimed on behalf of the authority, a considerable sum, and if that claim was established on the ground that back land was opened up, the owner would, as he understood the Act, have to find the amount as a cash payment, although it might be some time before he was able to sell any of his land for building purposes. Section 10, Sub-section (5), of the Town Planning Act, 1925, provided that any such payment might be recovered summarily as a civil debt. This, he thought, bore very hardly on the private owner of such property as he had referred to, because not only was his land to be intersected by a wide road with a width of

66 feet, which did not give him the best advantages for the development of his land for residential purposes, but he had to pay cash before any land could be sold. It was quite true, as Mr. Chart had pointed out in his Paper, that the frontager could only be charged his share of making a 40-foot road, although a 66-foot road was laid out, and then that payment was not to be made until the land was actually built upon ; but that did not alter the fact that the wider road was actually to the disadvantage of the owner, and that he was compelled to find the sum which might be awarded for betterment in advance of any benefit he might obtain.

Those were the only two points which he thought he could usefully bring forward with regard to the two Acts in question, and he would like to hear what Mr. Chart's answers were. He had very great pleasure in moving a vote of thanks to Mr. Chart, whom he thought was to be much congratulated on his Paper.

Mr. J. O. NESBITT (Member of Council), seconding, said he was glad that Mr. Chart had outlined the various Acts which had reference to the subject-matter of his Paper, which, having regard to the spate of legislation that had come from Parliament in the last few years on that and cognate subjects, it was well to have in that convenient form.

Mr. Chart had pointed out that, owing to the Town Planning Acts not referring to built-up areas, he would normally expect that those two Acts, the Roads Improvement Act and the Public Health Act of 1925, would in their purpose prove more useful in built-up areas, seeing that those areas were excluded from the town planning schemes. Mr. Chart perhaps had overlooked the large areas which were not, and might never be, town planned, and it was in respect of roads in those areas that he submitted that the two Acts would be more usefully employed. Further, he would go so far as to suggest that in built-up

areas, having regard to the liability of the local authorities for the payment of compensation, the local authorities would rather content themselves with proceeding under the old Section 154 of the Public Health Act, 1875 ; also it must not be forgotten that by the Public Health Act of 1925 the powers under Section 154 were somewhat enlarged. Section 83 of the 1925 Act, for the purpose of removing doubt, somewhat extended the character of the 1875 provision.

The two Acts dealt with separate and distinct matters, and he thought it would be well to emphasise the differences. For instance, the Roads Improvement Act referred to the prescription of the building line. There was no power of acquisition, and a claim for injurious affection must be made within six months after the prescription of the line. In the Public Health Act of 1925, under Section 33, one was prohibited from putting any new building fronting the improvement line. There was power to acquire the front strip if not occupied by buildings, and the acquisition might be at the same time as prescription or subsequently. A claim for injurious affection might be made at any time after prescription. Those were the essential points of difference between the two Acts to which it was probably worth while drawing attention.

As regarded compensation, from Section 9 of the Roads Improvements Act it would be seen that compensation for obstruction of corners was not one for the official arbitrator, but a single arbitrator, or, in case of difference, the county court, presumably because there were certain enlarged matters which were within the purview of the single arbitrator or the county court, and which would not make them applicable in the same way as the cases which would go before the official arbitrator.

Mr. Chart had further referred to the decided cases in regard to the removal of restrictions. He wondered whether those cases did not show that even surveyors were not fully endowed with the gift of prophecy. By their

advice they had seen the imposition in bygone days of restrictions which were found afterwards to be inapplicable, and then leave had to be sought to remove those restrictions. He was wondering whether landowners would not now sometimes consider whether, where they were protected by the town planning provisions, they would not rely rather on that protection than risk having to invoke the procedure necessary to remove the restrictive covenants.

As to Mr. Chart's description of the question of compensation, he was in full agreement with it. He thought Mr. Chart hit the nail on the head when he said that it was the market value and the degree to which that market value was affected by the prescriptions as determining the proper compensation. He knew from experience that alert and speculative minds could present claims which showed infinite resource, and advance good reasons in support of them ; but he thought, after all, the acid test was the one which Mr. Chart declared—whether or not the market value of that land was affected, and if that value was affected by those prescriptions, then the question of compensation would have to be determined following the difference in value as a result of them.

He had the greatest pleasure in seconding the vote of thanks to Mr. Chart for his instructive and helpful Paper.

Mr. E. W. HOOPER (Fellow) referred to the fact that the Roads Improvement Act forbade any new building except a fence or boundary wall, or any permanent excavation below the level of the roadway. The Public Health Act was not quite so precise, and merely forbade any new building, erection or excavation. Precisely what the word " erection " covered he did not know ; there was probably some legal definition, but if it applied to a boundary wall or fence, it seemed as if the Public Health Act prevented anything except a live fence in front of buildings.

As regards excavation, it was a question whether the two expressions were intended to cover the same thing, or

whether there was intentionally a distinction between an excavation below the road and an excavation. He knew a case where the owner had a site 2 or 3 feet above the road level, and put in plans for the erection of a garage. Thereupon the local authority prescribed an improvement line, and the owner set back his building to the prescribed line excavating the site to the road level. Then the council decided to acquire, and the owner included the cost of excavation in his claim. The local authority replied that that was something for which he could not claim compensation. The matter was settled in an amicable way, and so never came up for decision ; but the point needed clearing up.

Some rather intricate points arose as to precisely what compensation an owner could claim. Both Acts definitely limited it to injury to the property, and it seemed doubtful whether the owner could claim for consequential damage or what might be called incidental damage. What frequently happened was that a man prepared his plans and put them in to the local authority, who then prescribed an improvement line, so that he had to begin all over again and prepare new plans for the site. When it came to compensation, was he entitled to claim anything for the expense to which he had been put, or for any other damage he might have suffered apart from the actual depreciation of the property? The only way in which such damage could possibly be brought in was that the arbitration, if it came to arbitration, had to take place under the Acquisition of Land Act, 1919, and in Section 2 (6) the arbitrator was allowed to take into consideration other matters such as disturbance and anything not dependent on the value of the land ; but whether that would apply in the case of a prescribed building or improvement line, where there was no acquisition, seemed rather doubtful.

Then there were the cases where the local authority had given notice of their intention to prescribe a line, and took no further action for a considerable period. The owner

was not actually prevented from building, because there was nothing in either Act that prevented him building in front of a line before it was finally prescribed; but if he did so, he could not claim compensation under either Act for anything done after the service of the notice of intention. In one case within his knowledge very considerable hardship had been caused to the owner, over four years having elapsed since the notice of intention was served. Various circumstances had given rise to the delay, but in the meantime the owner had been quite unable to deal with his land.

There was one way in which he could probably have brought matters to a head, viz., by proceeding to build, because if he had succeeded in putting up a building before the line was finally prescribed, apparently the local authority would have had no remedy. If they had wished to acquire under the provisions of the Public Health Act, 1925, they were definitely prevented from acquiring land covered by buildings. Therefore they would have to acquire it under some other Act, and the owner would presumably be entitled to his full compensation for anything that was on the land according to whatever Act they were proceeding under.

In connection with the question of damage due to delay, the cinema case at Caterham was interesting. The line had been prescribed under the Surrey County Council Act, and there were many circumstances in connection with the case with which it was not necessary to deal; but he had seen the award, and it was in the form of a special case giving two alternative figures. The first figure which had been awarded to stand in any case was the damage which the arbitrator found had been caused through the owner being prevented from extending the existing building, which was erected to the prescribed line before it was finally prescribed, in front of the building line. The alternative figure was the damage to which he was entitled on the basis that he had waited until final prescription, and that was a considerably larger figure to the extent of some £3,000. That, as he had

said, depended upon the special circumstances of the case, but he thought it did show that an owner who, because of the delay in finally prescribing the line, built up to the line of which notice of intention had been given, might involve himself in a reduced amount of compensation by building before the line was finally prescribed. He thought that that kind of damage was unfairly incurred.

Mr. A. ENDICOTT (Fellow) said that in his view there appeared to be a good deal of misconception among some members of the profession upon the two Acts under discussion.

The first point to be remembered was that in prescribing a building line the local authority was neither acquiring land nor an easement in land. Section 5 (5) of the Roads Improvement Act, 1925, seemed to provide, with regard to the tribunal, that while the arbitrator was to be one of the official arbitrators holding office for the time being under the Acquisition of Land Act, 1919, the proceedings were not to be in accordance with the terms of that Act. Section 33 (7) of the Public Health Act, 1925, enacted that claims on the prescription of an improvement line were to be determined under the 1919 Act. He assumed, therefore, that the Arbitration Act, 1889 (by Section 24 of that Act) applied to and governed the proceedings arising out of the provisions of Section 5 of the Roads Improvement Act as it did under the Public Health Act, 1875 (except in so far as inconsistent with Section 180 of the latter) in cases other than acquisitions by a local authority. He would like to have Mr. Chart's view on that observation, because it might have a bearing on the tactics one would employ in presenting a claim to a local authority.

The next point upon which he would like some enlightenment was with regard to betterment. Under the Roads Improvement Act the claim arose, and presumably must be settled, on prescription of the building line. It

seemed that the benefit of the claimant which had to be taken into consideration was the benefit from the improvement made or about to be made to the highway (Section 5 (5) (b)). The importance of the words "made" or "about to be made" must be regarded. He happened to know of a case where it was fairly obvious that the local authority had no hope of widening the highway probably for twenty years. They had prescribed a building line involving a substantial set-back in respect of the business portion of a narrow street. It was clear, therefore (unless they were prepared to meet a heavy bill for compensation), they would not proceed to acquire the frontage strip so long as compensation for severance and rebuilding items fell to be paid, but would await the voluntary rebuilding by all or practically all the owners. Economic considerations might necessitate certain of the owners in the street rebuilding at no distant date, and the shop fronts would, probably for years, be then irregularly lined. The other frontages might not be set back until the local authority came to acquire the property themselves for the immediate purpose of widening. If the local authority was not proposing in the immediate future to acquire the land sterilised and widen the highway, how could they hope to sustain a set-off for betterment? The loss to the owners who first happened so to set back must be greater than if the street widening scheme was immediately to be carried out as a whole and on normal lines.

The extent to which an owner could improve or deal with his premises after the prescription must have a bearing on a claim. The word "building" in the Public Health Acts had no statutory interpretation. Hence the many actions. The draftsman of the Roads Improvement Act had given a special and wide definition in Section 11. After prescription could an owner, without touching the main walls, substitute a new shop front or divide into two shops without contravention? Two legal friends, both entitled to respect, gave him two opposite views. In such

circumstances the only safe assumption seemed to be that even a new front could not be put in.

He would be glad to hear the experience of Mr. Chart and of any other members as to procedure or betterment in the foregoing connections. If the learned official arbitrator, who was present, could, having regard to the dignity of his office, give any guidance on the Acts, he thought it would be greatly appreciated.

Mr. GEORGE DAVID (Fellow) asked whether claims on the reinstatement principle could be sustained in cases where lines, both improvement and building lines, had been prescribed through properties with no market value, such, for example, as churchyards, and even through churches themselves. It was rather difficult to visualise the market value of, say, a 14th-century church, and he would be very glad of Mr. Chart's views as to how cases of that sort should be dealt with.

One of the speakers had mentioned a point of which he had already had experience, and that was where a council, having given notice of their intention of prescribing a building line, had taken no steps to proceed with the prescription. Such a case as that had occurred on a property in which he was interested, the line was taken right through a small plot of land which was about to be let for building. It entirely sterilised the plot, and when he pressed as to when the prescription was going to be completed, he had been met with the rather naïve statement: "Oh, that" would lay us open to a claim for compensation." He would like to hear Mr. Chart's advice as to how to deal with such a council.

Mr. P. F. TUCKETT (Member of Council) added his thanks to Mr. Chart for his effort to assist surveyors on a difficult subject. He was quite sure that no young surveyor could have had a really good night's sleep since 1925. As a start on this subject alone, he had to wade through nearly

100 years of Public Health Acts ; then the Housing Acts, followed by the Town Planning Acts, and lastly, the Roads Improvement Act. Having acquainted himself with those Acts, he must go to the county council and see what improvement scheme they were contemplating in connection with his client's estate, thence, perhaps, to the Ministry of Transport to see what they were doing in the way of improvement lines, and then to the local authority in case they had taken any action under their town planning scheme or special Act. If then he found nothing detrimental to the estate, he might go to bed happy for that night, only to find in the morning that he was living in a fool's paradise, because, the local authority had just passed a resolution making the road in question a new street. Later, perhaps, a barn with a thatched roof might be burnt by a little boy who wanted to see what a match could do. When the owner came to reinstate the roof, the brick walls being still standing, the local authority said " No, this is " a new street ; your repairs fall within the definition of a " new building under the Act, and you must therefore set " back your building to 40 feet from the opposite fence, at " an expenditure double the cost of reinstating the old " building."

He would also like to ask Mr. Chart what he would do in a case like the following : A county council, on an ancient main thoroughfare, laid down an improvement line of 20 feet back from the present line. The Ministry of Transport at the same time laid down an improvement line 10 feet back, and the Town Planning Authority allowed a building line, for trade purposes, on the existing frontage line.

With regard to Mr. Chart's question, viz., What was the owner to do about making up the road in the case of an old highway being converted into a new street? His (the speaker's) advice would be to set back the fence to 20 feet of the centre of the road if the width was to be 40 feet, to send in plans for a new house, and leave the local authority to make up the road as and when they liked. In his view

the local authority could not make his client do the work, though they could, of course, charge the cost upon the frontagers.

Mr. T. BRENT (Fellow), having referred in feeling terms to the outstanding services of Mr. Chart as the representative of the Surrey Branch on the Council, services which were warmly appreciated by every one of his fellow-members in Surrey, said that when reading through the Papers he had felt how welcome it would be to surveyors to know how settlement of compensation could be speeded up. They knew well enough that the claimant could always be brought up short, but not so, it seemed, the authority. The authority prescribed their line, and Mr. Hooper had told them how years might elapse before settlement was reached. He had also heard of a case where a purchaser, having acquired some cottages, desired to turn them into shops, an improvement line was immediately prescribed, and two or three years elapsed before he could get a settlement. The property had been sterilised for that time. It would seem that the question of bringing the authority to the point of settlement was not the least important part of those transactions.

He desired to conclude, as he begun, by a word of personal thanks to Mr. Chart for his informative Paper.

Mr. J. F. BOWDEN (Member of Council) referred to the case of a small farmhouse, the end of which abutted upon a main road. A building line and an improvement line were prescribed with regard to the main road, and the former cut through the middle of the building. A fire occurred, and more than six months had elapsed between the confirmation of the building line and the fire, and the question arose whether that house could be rebuilt. He had looked at the definitions and had been trying to find from them the position under Section 5, Sub-section (3), of the Roads Improvement Act, 1925, which provided: "Where a building line prescribed under this section is in

“ force, it shall not be lawful, except with the consent of the
“ authority by whom the building line was prescribed, to
“ erect or make nearer to the middle of the highway than
“ the building line any new building.” Knowing the
number of difficult legal interpretations which had been
placed on the term “ new building ” under the various
Public Health Acts, and the cases which had been decided
thereunder, on turning to the definition section, Section 11,
he found himself more in a tangle than ever, because “ new
“ building ” was not defined at all ; it simply said : “ New
“ ‘ building ’ includes any addition to an existing build-
ing.” The mere saying that it included that did not help
much, and still less was one helped when one turned to the
definition of the word “ building ” at the top of the
section, because it said that “ ‘ building ’ includes any
“ erection of whatsoever material and in whatsoever manner
“ constructed, and any part of a building.” A part of this
building had been destroyed, and if a part was to be
regarded as a new building, no building might be erected
without the consent of the authority by whom the line
was prescribed ; yet, rightly or wrongly, he had argued
that the term “ new building ” in Section 5, Sub-section (3),
must be construed by the definition of “ new building ”
and without reference to the definition of “ building.” A
satisfactory compromise had been reached with the authority
concerned, and he and his client were satisfied, but he had
not heard any legal construction placed upon the expres-
sions referred to, and he thought that the point required
elucidation.

Mr. H. C. WEBSTER (Official Arbitrator) (Fellow) added
his thanks to Mr. Chart for his instructive addition to the
Transactions. He had given a clear synopsis of the Acts
as they affected surveyors. He had been delighted to hear
from Mr. Nesbitt that there were cases under those Acts
which could not come before official arbitrators, and he
hoped Mr. Nesbitt would continue his studies in that
direction.

Under Section 33, Sub-section (8), of the Public Health Act, 1925, it would be noted that the local authority had no power to purchase land between the improvement line and the road which was occupied by buildings, but that, of course, did not prevent a local authority prescribing the improvement line, which line frequently included buildings; and in that event, should the local authority procure further powers to acquire such buildings, the owner could not recover for improvements made since the prescription. That was his view. Under Section 5 of the Roads Improvement Act, 1925, the local authority could prescribe a building line which might or might not be the same as the improvement line already prescribed. Mr. Chart, on pages 94 and 95 of the current month's *Journal*, pointed out the fact that the prescription of an improvement and building line did not necessarily prejudice the owner of land, because in some cases a prudent owner, advised by a chartered surveyor, would stipulate for such a building line. There were owners and lessees who appeared to think that the service of a notice by a local authority must entitle them to compensation, and to them Mr. Chart's Paper was of particular value. Mr. Chart had referred to betterment. Speaking as one who had to adjudicate on such matters, he knew of no more difficult item to assess, and he had no hesitation in saying that before any arbitrator made a set-off for betterment he required that betterment to be fully proved.

He desired to be allowed to refer to the first cases of prescription of building line, to which Mr. Chart had mentioned on page 96 of the *Journal*. Those two cases affected a well-known beauty spot in Cornwall, and so effective was the building line there prescribed by the local authority, that only birds could thereafter possibly build on the land.

Mr. WILLIAM BELL (Fellow) asked whether in the case of an improvement line being defined, and compensation being given, the land in front of the line became the pro-

perty of the local authority. The question arose as to whether the public authority owned the land underneath the roadway or only the roadway.

With regard to the taking over of private roads, a difficult question had arisen as to Class 1 and Class 2 roads. That classification was now abolished, and the pooling system had come in. The point then arose, if an old highway on a classified route became, through building development, a private street, what was the position as to the grant?

Several curious points had arisen with regard to town planning. In one very large Midland town they had town-planned their sewage disposal works with a view to building development thereon at a later date, and an inspection of the plans proved very interesting. Whereas previously a vast acreage was required, another system by aeration would reduce the required acreage, and partial building development could take place pending the carrying out of the scheme. Similar questions arose with regard to graveyards. In one town where he was engaged the graveyard had been abolished and became an open space.

With regard to houses erected on building lines, he had once had a case where the London County Council had defined a line right through one, and he wondered what compensation could be claimed by the owner against the London County Council.

Mr. Chart had said in his Paper: "It has been estimated that, if an ordinary residential site in London is redeveloped, it may be possible under the London Building Act to erect a commercial building which will occupy six times the cubic space and will increase the traffic by eight to ten times the volume." He could not quite understand that, because if the height of buildings was increased it might be only office buildings, and that was not going to increase the traffic; the traffic was more or less governed by the locality and the trade conditions.

With regard to adoptive Acts, several councils disliked

adopting them because they were afraid adoption would be for all time. It would be better if they were all made compulsory. That was the difficulty with the Private Street Act of 1892.

The PRESIDENT congratulated Mr. Chart upon his Paper in connection with two important Acts. He desired to ask Mr. Chart's view on a case in which he was acting, and in which he was doubtful whether the method adopted was the proper one or not. About ten years ago the Postmaster-General agreed to take a lease of certain property from a client, who erected a new building upon it to approved plans. The premises were built, the post office established, and was so situated below a high-level road, that it was impossible to reconstruct the property in any other position than that in which it now stood. The county council not only prescribed a frontage line, under the Public Health Act, 1925, but they had also prescribed a building line under the Roads Improvement Act, 1925, running through the post office. On what basis should a claim for compensation be founded under the Act? Probably the building would last for 100 years ; on the other hand, it might be burnt down to-morrow. He agreed, if the property were burnt down, the Postmaster-General or the lessor would receive compensation for the resulting damage ; but assuming it was completely destroyed, and became a new building within the meaning of the local bye-laws, the building line would immediately become effective and the post office could not be reinstated.

Under the terms of the lease, moreover, the Postmaster-General had covenanted to reinstate the premises if burnt down. What was the position of the Postmaster-General? Could the lessor claim damages from him because the county council had prescribed a line through the building, which would prevent him reinstating it? Alternatively, if steps were taken to enforce the claim now, what should the owner do in respect of something that might arise immediately or

in the distant future? It was clearly impossible to foresee how many years the claim should be deferred ; but in order to protect his client, he had in the circumstances adopted the prudent course, and claimed the total value of the premises.

The Institution was much indebted to Mr. Chart for his Paper, which had been most instructive and interesting, and he would be still more interested to hear his answers to some of the questions put.

The vote of thanks was then put, and carried with acclamation.

The following written communication has been received from Mr. R. M. BARRABALL (Professional Associate):—

Some speakers having remarked upon the present overlapping of authorities, I should like to point out the effect of the Local Government Act of 1929 upon the two 1925 Acts.

Section 29 of the Local Government Act provides that any " road as respects which a county council become " by virtue of this Part of this Act the highway authority, " shall be termed a county road, and all enactments relating to main roads shall as from the appointed day (1st " April, 1930) have effect as if for references therein " to main roads there were substituted references to county " roads." County roads broadly comprise all classified and main roads, and in rural districts all other roads ; but urban authorities with a population of over 20,000 can " claim " any county road. Section 34 of the Public Health Act, 1925, must, therefore, be read as if " main " road were " county " road.

Section 30 of the Local Government Act states that as from the appointed day rural district councils shall cease to be highway authorities. So that a rural district council cannot exercise powers under the Roads Improvement Act of 1925, which is applied only by the Minister of Transport,

the county council, or any other highway authority. But the rural district council being a "local authority" within the meaning of the Public Health Acts can still adopt and exercise powers under Section 33 of the Public Health Act, 1925, although (apart from "delegated functions") it has no interest in the roads. Therefore, unless the rural district council obtained the consent of the county council, it would have to bear the cost of the "prescription" in an irresponsible manner and without aid. Similarly with building lines and "widening" lines laid down in the town planning scheme of the rural district council. Thus the county council (with the Ministry of Transport) is the only *real* authority concerned in these matters, although it may employ the rural district council as its agent. It may be, however, that there are still rural district councils who are rash enough to work independently.

It has also occurred to me that insufficient attention has been paid to the effect of the proviso to Section 33 (13) of the Public Health Act, 1925. Sub-section (5) provides that no new building or erection or excavation shall . . . be placed or made . . . *except with the consent* of the local authority, as mentioned on page 98. And the proviso to Sub-section (13) states that any consent required by Section 33 shall not be unreasonably withheld. Whether or not such consent has been unreasonably withheld is to be determined by the Minister of Health. It would seem that the respondents in *Sittingbourne U.D.C. v. Lipton, Ltd.*, could have used this proviso and avoided the action and its result.

Replying to the discussion, Mr. CHART writes:—

I have been asked to repeat in my reply to the discussion the particulars of the case at Caterham to which I referred in introducing my Paper, and of which further details were given by Mr. Hooper.

The Roads Improvement Act is modelled on similar, but not identical, provisions contained in earlier local Acts,

in which the time for making a claim or for payment of compensation may differ from the provisions of the public statute. It is not safe to assume that a particular case falls necessarily under the public Act, *e.g.*, a Surrey case may be under the Surrey County Council's Act, 1925, or, if in Mitcham, Surrey, under that Urban District Council's Act of 1923.

The Caterham cinema case is one under the Surrey County Council Act, 1925. The Council gave notice of intention to prescribe a building line ; the Cinema Company built their cinema to the intended line before it was finally prescribed and, on prescription, claimed compensation ; the Council replied that the building being there when the line was prescribed, there was no damage and nothing to arbitrate about. On an application to the High Courts an arbitration was ordered as there was a possibility of damage arising from the owners' inability to extend their building beyond the prescribed line.

Turning now to Mr. Bidwell's point upon the sterilisation of large areas at main-road corners, the loss of building sites, their lesser suitability for commercial purposes, and the cost of maintaining the sterilised land, are all factors which, inasmuch as they injuriously affect the property, are subjects for compensation. As regards the necessity for such extended lines of vision I express no opinion; it is a question for the highway authority whether their advantage is warranted, having regard to the compensation payable.

Mr. Bidwell's second question is rather outside the scope of the Paper, which is not directed to town planning ; but it appears to me that if development of the back land has been definitely secured by a binding agreement with an adjoining owner, and that the arterial road proposed will not give advantageous development when constructed, it will be difficult for the Town Planning Authority to establish a claim for betterment, which under the Town Planning Act, 1925, Section 10 (3), is limited to one-half the amount of the increase in value. I agree that Section 10 (5) says that

betterment may be recovered summarily as a civil debt, but that sub-section must be read in conjunction with Section 10 (4) and with the provisions of the scheme itself (*vide* Model Clauses for Town Planning Schemes, Nos. 54, 62, and 63).

Mr. Nesbitt is right in pointing out that claims under Section 4 of the Roads Improvement Act are settled by a single arbitrator or by the county court and not by the official arbitrator; but as regards building lines as prescribed under Section 5, the official arbitrator functions as mentioned in the Paper.

The only suggestion I can offer for the difference between the two Acts as to prohibitive excavations is that the Acts were promoted by different departments and considered by different Committees of Parliament, with the result pointed out by Mr. Hooper; as regards the definition of "erection" see the case reported in the *February Journal*, page 341.

Mr. Hooper's further point, which was also referred to by Mr. George David, is a much more serious one. If it is a fact that the local authority can, by giving notice of intention to prescribe either a building or an improvement line, and then doing nothing, reap all the benefits of prescription without paying compensation for damage, it is a serious defect; but the remedy, if remedy there be, is a matter for a lawyer rather than for a surveyor.

I appreciate the difficulties to which Mr. David referred, when improvement and building lines are prescribed through churchyards, churches, and chapels. Public sentiment in this country is all against the expropriation of such properties for secular purposes, though, as we are all well aware, it has become inevitable in London and other large towns; possibly the principles that have been applied in dealing with compensation claims in those cases might prove of assistance to Mr. David.

I am in agreement with Mr. Endicott that the Arbitration Act, 1889, applies to arbitrations held by the official arbitrator. On his question of betterment arising on im-

provements " about to be made to the highway," I cannot conceive that the official arbitrators would begin to assess betterment without definite information and evidence from the authority as to when the projected improvement would materialise.

I do not think that the difficulties of bringing matters to a head, once the line is prescribed, are as great as Mr. Brent has described ; the claimant too often waits for the local authority to apply to the arbitrator for a hearing ; if a claim is preferred and no settlement arrived at within a reasonable time, the claimant can, and should, apply for arbitration himself.

Limits of time and space prevent me from entering into the questions raised by Mr. Bowden as to the definitions of " building " and " new building " ; they have been in the past a fruitful field for our legal friends, and, like Mr. Bowden, I leave them to unravel the tangle.

In reply to Mr. Bell, the general rule is that the soil of the road, *i.e.*, the freehold, vests in the owners on either side. When a local authority purchase the actual freehold, either for an entirely new road, or for an addition to a highway, the general rule will no longer apply. This may be of importance where there are workable minerals beneath the surface, and in such cases the local authority may accept a deed of dedication as highway, leaving the freehold vested in the original owner, rather than compensate him for loss of minerals, and possibly severance if he is the owner on both sides of the road.

The increase of traffic on redevelopment of a London site is on the assumption that residential buildings are replaced by shops, and includes cartage of goods as well as visits of customers.

I naturally hesitate to say anything that might appear critical of the words that fall from our President, who has given us particulars of so interesting and difficult a case; but I am extremely grateful to him for his kind words of commendation of my Paper.

My thanks are due too to Mr. Bidwell who proposed, and to Mr. Nesbitt who seconded, the vote of thanks ; to all those members who have so kindly supported it ; and especially to Mr. Hugh Webster, whose words, as one of the official arbitrators, must carry much weight ; and last, but by no means least, to my old friend Tom Brent, whose all too flattering references to my own activities in the Surrey Branch must not be allowed to obscure the fact that he has been its honorary secretary and moving spirit for more than twenty years.

PAPER 532.

SUGGESTED AMENDMENTS OF THE LONDON BUILDING ACT, 1930.

By Gilbert H. Lovegrove, F.R.I.B.A. (Chartered Surveyor).

*To be read at the Ordinary General Meeting of The
Chartered Surveyors' Institution on Monday, 9th
March, 1931.*

Before commencing to consider possible amendments to the London Building Act, 1930, it is of interest to look back on its predecessors, on which it is based, for it was by the gradual expansion of old regulations that the Act of 1774 was formed, and that, modernised, is the foundation of the present Act ; a more detailed account will be found in a Paper read by Mr. W. R. Davidge before the Royal Institute of British Architects in 1914. Practically all the old regulations were for the settlement of party-wall disputes and for the prevention of fire, the risk of building timbers into flues and the fire-resisting qualities of plaster and lime-wash having been recognised at a very early date.

During the mayoralty of Fitz Alwyne, the first Mayor of the City of London in 1189, the London Assize was proclaimed largely to facilitate the erection of stone party-walls and " especially for appeasing contentions which sometimes " arise between neighbours," the City having been practically destroyed by fire in 1136. Each owner had to give a foot and a half of land, and a wall 3 feet thick and 16 feet high was built at their joint expense with a party gutter. Wise in his generation the Mayor forbade the acquisition of " ancient lights."

The Ordinance of King John in 1212 required all ale-houses to be built of stone, while cookhouses and bake-houses were to be whitewashed and plastered inside, builders being urged but not compelled to roof "not with reed nor rush, but with tile only or shingle or boards on lead." All thatched houses were to be plastered over within eight days or to be demolished. In this Ordinance projections from houses were limited to $2\frac{1}{2}$ feet, a distance still forming the maximum projection for cornices, and the penalty for infringements was a fine of 40s., an amount still in force in spite of the change in the value of money.

By various Acts and Proclamations of Elizabeth and James I. attempts were made to prevent the overcrowding of the City by requiring that no new houses should be built except on old foundations, the plans of which were certified by the churchwardens. Here is the origin of Section 13 of the present Act.

By a Proclamation of James I., in 1605, front walls and windows were to be built of brick or stone owing to the scarcity of timber—here is the ancestor of the Second Schedule, while a large part of Part VI. (Construction of Buildings) is found in the Act of 1655 under the Commonwealth requiring houses to be built "straight up without jetting out into the street."

The first comprehensive regulations followed the Great Fire in 1666, when houses were divided into four "sorts" according to the importance of the streets in which they were built, and the thickness of the walls and heights of storeys varied accordingly.

The first "sort" were to front by-lanes, although it is curious that the only remaining examples, in my experience, front Cheapside at the corner of Wood Street.

The second "sort" fronted streets and lanes of note, or the River Thames, and required thicker walls and loftier storeys other than the cellar and garret. The third "sort" fronted "high" and principal streets, while the fourth "sort" included mansion-houses "of the greatest" big-

“ness” not fronting on any street; the height of the storey was not limited as in the other “sorts,” but they were not to exceed four storeys in addition to the cellar and garret.

In this Act we meet the first “exempted building” in the Waterworks on London Bridge, and also the district surveyor, for by it “discreet and intelligent persons in the art “of building” were appointed (a description which applies to his present day successor) as supervisors to see that the rules and scantlings of timber prescribed were “well and “truly observed, taking oath upon the Holy Evangelists” for the true and impartial execution of their office. A medical examination has now taken the place of the oath. These surveyors prepared plans of the walls of the ruined buildings, and many of these are preserved at the Guildhall; they show the new building lines after setting back for street widening, compensation being payable as in Section 23 of the 1930 Act.

The penalty for removing the setting-out pegs was to be “openly whipped neere unto the place where the offence “shall be committed till his body be bloody.” The fee for setting out the plot was 6s. 8d., and the adjoining owner was not permitted to build until he had paid one-half the cost of the party-wall with 6 per cent. interest, the arbitrator being the alderman of the Ward, who also decided disputes arising from ancient lights and other easements.

The modern Acts do not schedule the scantlings of timbers, although in the provinces building regulations usually do: provision is made, however, for by-laws defining them.

By the Act of 1708 party-walls had to be carried up 18 inches above the roof, and the frames of doors and windows were to be set back 4 inches from the face of the wall; and by the Act of 1724 party-wall openings were prohibited except when the buildings were in one occupation, while dangerous structures were dealt with for the first time by the Act of 1765. By the Act of 1764 the district

surveyor had to take oath that every new house was built "agreeable to the Act" within fourteen days after it was covered in: this procedure has now been simplified to the acceptance of his fees.

The Act of 1774 is really the forerunner of the modern Acts. It collected the old laws and has been followed in all the new, many of the clauses being copied in the same wording, the chief difference being that in that Act the thickness of walls and heights of stories varied according to the rental value. The astonishing thing is that the vision of the legal draughtsman was so far-sighted that building can still be carried on smoothly under its provision.

* * * * *

During last year there have been many conferences whose reports have been published, but nothing revolutionary has been suggested; in fact, many are contradictory.

We have been told by one that elasticity is the desirable feature, and by another that the power given to the Council to waive the requirements of the Act leads to indecision as to what can be built, and the only two main suggestions on which there is general agreement are that all regulations relating to building should be collected in one Act, and that the portions of the Act relating to detailed structural provisions should be transferred from the Act to "building regulations," which could be reviewed easily at least once a year.

On the first of these there must be general agreement when we find parts of many Acts have to be considered before designing a building such as the Underground Bake-houses Act, the Factory Act, the Town Planning Act and the Petroleum Act, while some parts of the Drainage By-Laws, relating to air space, control the design of a building and are not merely plumbers' regulations.

On the second suggestion there is no doubt that building construction is continually altering, and with the change new regulations are required. It is not right that a builder should be able to obtain the approval of the Council to a "waiver" of the Act where it is found to be out of date, the Act should be revised.

There appears to be agreement among all recent conferences on building regulations that only such regulations as affect the general design of a building should be retained in the Act, and that constructional details should be transferred to by-laws so that they can be modernised readily. The Metropolis Building Act of 1844, which was passed before the day of the Metropolitan Board of Works or of the London County Council, gave the Commissioners of Woods and Forests the power to issue new rules of building construction from time to time, and similar powers might be conferred on the Council.

This is particularly necessary in the case of steel-framed buildings, to allow of elasticity and revision, and has been provided for the more modern type of construction in reinforced concrete, and all such regulations should provide for reference to the Tribunal of Appeal as now constituted.

Another conference has complained that objection is not so much to the Act as to its administration in that so many different approvals have to be obtained. But it would be impossible in practice to consolidate all these into one ; for some, as in the case of an electric theatre referred to in the Conference Report, such as the frontage line, must be settled before the design is prepared, and others, such as the drainage system, after the other approvals have been obtained and the design completed. Further, it would be impossible for one official to deal with all possible matters which now require approval. At the present time the application is considered by an official with a great experience of that particular feature and a full knowledge of precedents, so that uniformity of treatment results. In many cases the approval

might be left officially to the Superintending Architect to avoid the delay of formal approval being required from the Building Acts Committee and the Council.

In considering these two aspects, I feel that the Act has been evolved throughout the ages with great wisdom, and as we have grown up with it, in so large an area as London, very little change in administration is possible. It is largely only in the proverbial hard cases that one feels the Act should be thoroughly revised, and so far as the administration is concerned, the only difficulties experienced have been when the Council, as the administrative authority, is unable to forget that it is a property owner whose other interests may be affected by its own decision.

* * * * *

THE LONDON BUILDING ACT, 1930.

PART I.—DEFINITIONS.

None of the modern Building Acts defines what is a building, and the dictionaries are not very successful, so that now Case law has defined a number of instances as to what are "buildings" covered by the Act, it is probably best that the omission should be continued.

Domestic and warehouse buildings might be more clearly defined. The existing circular definition that a warehouse building is one that is neither a public building nor a domestic building, and a domestic building is one which is neither a public nor a warehouse building is unsatisfactory, although one cannot expect the equal of the beautiful definition of Section 95 that an old building is one that is not a new building. Shops over a small area should be included in "public buildings," together with all places of public assembly; at present, except under Section 97, the Council has no control, and many shops and churches are extremely dangerous in case of fire. I

suggest buildings having a floor space of over ten squares in all on one or more floors should be so included where the public has access. The definitions should be grouped in one section, and not be separated under Sections 5 and 95.

PARTS II. AND III.—LAYING OUT STREETS AND FRONTAGE LINES.

Several of the sections governing the adaptations of ways practically duplicate sections governing the laying out of ways, and amalgamation would shorten the Act.

The cost of land would appear to be the only reason why Section 12 should not apply to the whole county. Traffic congestion in Inner London requires new roads 60 feet in width if any should be built, even more than those to be laid out or adapted at a greater distance than two miles from St. Paul's Cathedral, which only brings one to Islington Town Hall in the North, Bond Street in the West, Walworth in the South, and Cambridge Road in the East. It has always appeared grossly unfair that an owner who has built up to his boundary should have the right to rebuild to the same line within the prescribed distance of the centre of the road when his neighbour who has not done so cannot ; if he is rebuilding he is not losing any of his buildings, and the existing building was often erected illegally. In recent years I understand the Council has prepared a General Improvements plan showing building lines to which it desires frontages to main roads to conform, but without the power to enforce, and a desirable amendment to the Act would be to extend this plan to *all* roads in the county with power to enforce, allowing compensation to be payable if approved by the Tribunal of Appeal, the amount to be settled as in the present method of compulsory purchase. One-storey buildings could be built temporarily in the recess so formed ; there are many

buildings in existence for which compensation should not be paid, especially as the suggestion would only take effect in the event of rebuilding. In this way, with the passage of years, streets could be widened without compulsory interference with newly built and costly buildings. Section 23 provides for this in the case of buildings in advance of the general line of buildings.

At the present time the Council follows a somewhat similar policy where there are projecting shops or forecourts by approving applications to bring the main building forward one-third of the projection or forecourt, the remaining two-thirds being surrendered to the public way. There appears to be a very complete General Improvements plan in the City following the suggested lines with powers of compulsory purchase under Michael Angelo Taylor's Act.

The building line has practically formed itself with the effluxion of time, but power is given to the Superintending Architect to define the "general line of buildings" only in an existing street, and this is a different matter from the "building line." He should certainly be authorised to define the building line in a proposed street, and it would not take many years for a complete survey to be made defining the building line in all the streets in the county area in conjunction with my suggestion of a General Improvement scheme.

A defined building line would also settle any disputes in the future as to what is the general line of buildings where a number of small owners have confused the defined line without consideration for each other, or in such a case as where the first building in a street has been erected with a forecourt, the present regulation requiring all future buildings in that street to have one. The building line has a definite bearing upon the width of the street for the provision of air and sunlight apart from the requirements of traffic, and the two should be considered together wherever possible. If there are wide forecourts, the carriageway need not always be the prescribed width with the incidental ex-

pense ; and if traffic should increase, the cost of widening is not great. The saving in the cost of forming the carriage-way in new streets could be used as an inducement to the builder to provide deep forecourts.

Although the Council has power to approve, under conditions, the laying out of streets to form *culs de sac* in residential districts to provide sites where freedom from the noise of traffic could be obtained, the wording of the section is such as to discourage applicants, and the general opinion appears to be that such closes or D-shaped roads are prohibited. It is doubtful whether they should be permitted, as they may degenerate into unhealthy slums, however desirable they may be when first laid out.

There seems to be no real reason why building should be prohibited on forecourts within 50 feet of the highway in wide roads such as Brixton Hill ; here, again, is a case for the immediate preparation of a plan showing a general building line for all highways without regard to present conditions other than the needs of traffic.

As the Council has power to compensate owners whose buildings were in advance of the general line of buildings before they were demolished, it should have a similar power where the buildings were within the prescribed distance of the centre of the road.

A desirable amendment of Part III. of the Act would also be the requirement that plans of the old buildings should be certified by the district surveyor similar to the requirement under Part II., and also that all plans so certified should be filed at the County Hall and not in the district surveyor's offices as soon as the immediate need for them is over.

It is curious that while the Council has full control over the laying out of new streets, it has none whatever over the closing of old courts or streets. The procedure in this matter could be simplified and placed in the Council's hands with advantage, forming part of their powers for dealing with a cleared area.

PART IV.

The naming and numbering of streets seems out of place in a Building Act and might be transferred to some other Act or the By-Laws, and my only suggestion is that whenever possible the numbering of streets should be compulsory, and should be on a similar basis throughout the county, either consecutively or with the odd numbers on one side and the even numbers on the other.

PART V.—AIR SPACE.

A basement is not defined in the Act, but, by deduction, is a storey whose floor is more than 4 feet below the adjoining pavement ; and, if it is accepted that such a storey should be inhabited, it is urged that a space at rear is insufficient without a space in front at the level of the floor, and that no distinction should be made between houses for the working classes and those for other classes of occupants, or between streets laid out before various dates.

Whether a basement is properly ventilated depends very largely on the individual case, and certainly the age of the street should not be taken into consideration, while the buildings surrounding the windows, particularly the ubiquitous back addition, may negative the value of the air space very largely. The minimum space required need not, in fact, ventilate the basement ; and if habitable basements are to be continued, they should be either specially and individually licensed under similar conditions to those made by the Public Health Act, 1891, or provided with an open space exclusively belonging to them at their floor level and not at the level of the adjoining pavement.

Very considerable doubt exists in my mind as to whether any domestic building should be built with less space at the rear than the minimum allowed even if it follows the outline of an old building, drawings of which have been certified

by the district surveyor, but it is probable that very few cases actually arise where the new buildings are required for domestic purposes. When we know officially that 40 per cent. of recruits for the Army are rejected as being physically unfit, we should consider how much of this large proportion is due to unhealthy surroundings.

The air space of 100 feet super in rear of a building was required by the Act of 1844 when London was not so congested as now. This should be increased to 150 feet at the least, and should not include the space covered by water-closets, which could, in theory, cover the whole and produce a really "insanitary area."

Many ground-floor rooms are little better than basements from the habitable aspect owing to the surrounding back additions, and Mr. Horace Cubitt once drew up a suggested regulation designed to prevent these obstructions ; fortunately fashion in design is preventing them from forming part of the plan of small modern houses.

A large proportion of London's residents pass a third of their lives in office buildings, some of which are in basements, and have their meals in restaurants, which, again, are frequently in basements, but no provision is made in the Act for proper provision of light and air in these buildings, even for the caretaker who may be underground, though usually he is in the roof space. The only protection these workers have are the necessity for light for working purposes, and in the older buildings this is insufficient. In the same way large hotels and lodging-houses, being defined as public buildings, are exempt from this Part of the Act.

In spite of the provisions designed to provide light and air around a building, apart from the minimum areas of window openings provided by Section 76, there is no requirement for their admission into the building except in Section 44, Sub-section (1), which provides that a basement shall be sufficiently lighted and ventilated if the open space of 150 feet super in rear of the building (not that of

100 feet in rear of the basement) may be built on. The requirements of Section 76 may not provide sufficient light and air particularly in ground-floor rooms.

In a corner building the permitted length of the return frontage at the same height as the main elevation is too short for modern conditions and should be extended.

The requirements as to courts within a building should be made more stringent ; such courts should not be partly covered at the top, and the diagonal line drawn from the sill level of a habitable room to the parapet opposite should be at less than the $63\frac{1}{2}$ degrees with the horizon now allowed, while provision should be made for adequate width. The size of the window should have some bearing on the habitable condition of such rooms, particularly in its relation to the depth of the room, and here one may say that the requirements of Section 76 might be made more stringent, particularly for attics, for which a minimum height is provided, but not a minimum cubic content of air or a minimum area of window space, while the provision of a skylight only is allowed, a permit which, I suggest, should be withdrawn. This requirement of a minimum height without a relative minimum cube produces the curious result that an attic having insufficient height may be brought into accord with the Act by moving the vertical ashlar so reducing the floor area and the cube.

Any comment on the limitation of the height of building opens a very contentious subject. This limitation was probably first imposed to meet the wishes of the Fire Brigade, but has now received strong support from the traffic authorities ; and while fire-fighting apparatus could be provided to be effective at very great heights, as it is in the case of the dome of St. Paul's, no practical proposal has been made to meet the arguments of the traffic experts which would allow of approval of a general increase in the height of buildings, and the only course is to take each site on its merits for this purpose. There remains the question of health, and while we are told that in London the height of

a building should not exceed $1\frac{1}{4}$ times the width of the road to provide sunlight in the rooms opposite, those who spend their days in the narrow streets of the City are not noticeably unhealthy. Very high buildings are only required in business centres for financial reasons, and the less robust of the population are not likely to be affected. While the obvious sites for exceptionally high buildings are those fronting wide open spaces, the suggestion has been made that buildings on these sites should be kept exceptionally low to allow of the free passage of air to the buildings behind, but I suggest this is an unsound argument based on enthusiasm.

The procedure necessary to obtain the Council's approval is onerous, giving an owner of land 100 yards from the site of a proposed "high" building the right to object; that happens to be the length of Poultry from Mappin's corner to the corner of Bucklersbury, and a building 100 feet high could hardly affect any building so far distant, and as this is the radius of a circle enclosing possible objectors, their number might be very great. While a public advertisement is insufficient notice of intention to build, I suggest that adjoining owners and those on the opposite side of the street only should have the power of objection, for the Council is considering the general public when approving the application. The late Mr. Daubney once pointed out that it is necessary to give all these notices under this section before commencing to erect a building 21 feet high in a passage 20 feet wide laid out after 1862.

Here, again, I cannot see how the age of the street has any bearing on the height of the building fronting it; and if the comfort of the general public is the first consideration, there is no reason why the premises of the Inns of Court or of the Government or the Council's own schools, wherever they may be, should be exempt from this Part of the Act.

As an elected body must be influenced in many ways, such as precedent, the appearance of the building, or the

proximity of one of its own buildings, it might be better for the approval of higher buildings to be placed in the hands of the Tribunal of Appeal direct, for we have seen how much sarcasm has been undeservedly thrown at the Council over Messrs. Swan & Edgar's building.

Although in accordance with the Act on its main frontage, a building may become a "higher" building on its flank, and provision should be made for this in a new Act.

The restriction of height in different parts of London by the proposed zoning of areas would not only interfere with the rights of owners, but would stabilise the present conditions of areas so hindering future development ; for example, the district round Oxford Circus is growing rapidly as a business centre at the present time, but this would have been impossible if it had been "zoned" 50 years ago, and no one can forecast where the next business centre will be.

PART VI.—CONSTRUCTION OF BUILDINGS.

An entire evening might be spent in a discussion on the regulation of the construction of buildings, but I will be brief.

We have seen how the construction of buildings has been regulated from time to time, and practically all these regulations have been made for fire protection, the strength of the structure being a modern consideration following the decay of the old Trade Guilds ; and while one of the recent conferences reported in favour of a lessening of regulations owing to the high standard of modern building, its members were very respectable gentlemen, and it is doubtful if any district surveyor would agree to the suggestion for the larger proportion of the work carried out in London, particularly the very small class of work.

The weakness of those sections of the 1930 Act, which were not included in the 1894 Act, appears to be that a petty sessional court should be the referee in a dispute as

to the strength of a steel-framed building between the district surveyor and the building owner ; this should surely be a matter for the Tribunal of Appeal as now composed. No provision is made for inspecting the building after it has been completed, the steelwork remains hidden from view until it is taken down, whatever its condition may be. I understand that in America provision is made for opening it up at stated periods, and something of this sort is very desirable to prevent possible collapses.

Many walls have been rendered defective through the removal of the loads from one side after having been evenly loaded on both sides. It is common knowledge that the external walls, including the flank walls of an old building, bulge far more quickly than an evenly loaded party-wall, and it is rare that a party-wall is rebuilt with the rest of a building owing to the inconvenience caused to the adjoining occupier. Some provision might be considered for independent inspection other than for the purpose of serving a dangerous structure notice with a view to the future stability of the wall, particularly where the erection of a steel-framed building is proposed causing the uneven loading of a wall. At the present time, in practice, the adjoining owner's convenience has too great a weight in preference to a broad-minded opinion as to what is best in the interests of sound building.

As to the details of construction, concrete lintels should be legalised over recesses in party-walls, and there is now no real constructional reason for requiring one-half of the area of an external wall above the ground storey to be formed in brickwork, while in the interest of health the larger the window the better.

Section 61 should be amended to require all bressummers and storey posts in the ground and first storeys carrying the upper brickwork and floors to be of steel encased in concrete as a preventative of collapse in case of fire, while the decay of wood storey posts has been the cause of the premature rebuilding of hundreds of walls.

No provision is made for the omission of the party-wall parapet between two concrete roofs, and there appears to be no reason for the limit of 47 degrees to the angle of slope of a warehouse building. If it is a requirement of the Fire Brigade, it should apply with more consistency to a domestic building.

Fire-brick lining should be required for almost every flue other than the ordinary domestic open fire or domestic coke boiler ; many flues have been cracked, with the resultant risk of fire through the use of modern apparatus with old domestic flues, and in party-walls the back of all flues should be $8\frac{1}{2}$ inches, and the height of all chimney-stacks should be regulated as well as those used for trade ; there would not be then so many long stalks bearing in all directions.

No provision is made for the control of cranes fixed over the public way except the approval in diagram form by the local council, and the general supervision of the district surveyor.

While provision is made for an air space under a basement floor, no requirement is made for ventilating this space. The provisions as to the cubical content of buildings are capable of modernisation, and it is suggested that there need be no limit, provided the requirements of the Council as to construction and means of escape, and of the Fire Brigade as to fire prevention, are met, with power of appeal ; certainly, the necessity of proving that additional cube is necessary for the building is not required. It is true that buildings can be erected now up to four million cubic feet in content, but the conditions are so onerous that general use of the permission given by the Regulations of 1928 is unlikely.

Section 87 governing the construction of public building should be enlarged to cover any but small shops with less floor space available to the public than ten squares ; at present these can only be controlled as to fire exits where more than twenty persons are employed, but many of them

are dangerous when used for the sale of inflammable goods provided, possibly, with only one door and that opening inwards.

In a revision of the Act this section should be entirely reconsidered and placed in Part VIII., when the opportunity should be taken to include the rules of the Council governing the design of specially approved buildings so that there is only one authority. I remember some years ago the Council wanted the exit passage of an electric theatre to be provided with a slope between two levels, but the district surveyor under this section required steps.

It is suggested that garages forming part of dwelling-houses should be entirely separated from them by fire-resisting walls and floors.

PART VII.

A great deal of time is occupied by the Building Act Committee and its officials in dealing with special and temporary buildings, and where these buildings have been erected without notice to the district surveyor, a great deal of expense is caused to the owner in obtaining permission to retain them under the present procedure, which requires the submission of detailed drawings to the Council.

Now that steel-framed buildings are provided for under the Act, the district surveyor should be given power to approve of the construction of the larger type of iron buildings, many of which are open sheds, while the smaller type, in my opinion, can be safely dealt with by actual inspection. The policy of allowing a temporary building in any particular position is, however, a matter for the Council, and an application accompanied by outline drawings would be sufficient: the present system of periodical inspection should be continued.

Wooden structures over a very small cubical content should be prohibited, and the construction of the remainder left with the district surveyor rather than the local authority.

PART VIII.—MEANS OF ESCAPE IN CASE OF FIRE.

Several amendments required to this Part suggest themselves:—

A definition is required of a building “ adapted to be “ occupied by more than twenty persons ” on which there must be difference of opinion according to the use made of the building.

All but small shops should be included, particularly where inflammable goods are sold, and all churches and other places of assembly.

While certain buildings must have access to the roof and a guard rail thereto, no power is given to provide safe access away from the roof over adjoining premises, which is almost of equal importance. If the owner cannot obtain permission, he may be put to very heavy and quite unnecessary expense.

The sections of the Factory Act dealing with escape should be repealed, and all twenty-person buildings be placed on one footing.

All shops with living rooms over should have protected ceilings, and the staircases should discharge into the open air through protected passages.

An enquiry, not necessarily by a coroner, should be made into every fire.

Section 97, governing existing twenty-person buildings, should be actively enforced, and provision should be made for inspection of approved buildings to see that the requirements have been maintained.

PART IX.—PARTY STRUCTURES.

The settlement of difference between the building owner and the adjoining owner under this Part of the Act works so smoothly that only a few suggestions occur, and those of a minor character.

In Section 116 it is laid down that in the case of a party-

structure being dangerous, the provisions of Part X. of the Act will apply, but there is no reference in Part X. to party-structures, and in practice the only variation from the usual procedure is that work can start before two months has elapsed from the date of the notice. Notice still has to be given, and an award signed, so that in the case of an unfriendly adjoining owner or of a dilatory surveyor considerable time may elapse from the date of the dangerous structure notice ; the notice also overrides any award whatever the nature of the work agreed upon.

Following the decision of *Thornton v. Hunter* that the building owner has no right to place footings on the adjoining owner's land, notwithstanding Section 117, Sub-section (6), an amendment giving him that right is necessary, and should cover the formation of grillage foundations, which were rare when the 1894 Act was passed. Good construction requires that they should extend under the adjoining owner's land, but when the adjoining owner becomes the building owner in his turn, his difficulties are increased unfairly ; the only alternative seems to be either that they should not project, or, if the building owner is to have the right to build them under the adjoining owner's land, they should be at such a depth that they are not likely to prove a nuisance to the adjoining owner in the future.

It would be a great convenience if there were an official surveyor who could be appointed when the adjoining owner refuses to appoint a surveyor, as it is an embarrassing position for a private surveyor to be forced upon an unwilling and strange client. The life of a building owner's surveyor would also be eased if it were definitely stated who is an adjoining owner and how many notices ought to be served, as delay in commencing work and the risk of an action for damages is increased where there are several persons interested, some of whom are unknown until late in the proceedings. The definition that the adjoining owner is the " owner or one of the owners " is too uncertain, and it is difficult to find out who is liable for structural repairs. The

Courts have decided that a yearly tenant is entitled to a notice which seems unreasonable ; it should be sufficient to serve a notice upon the building as well as upon any known owners as is done under Part X. for dangerous structures.

Again, the adjoining occupier has certain rights under Section 116, although not necessarily entitled to a notice, and occupiers are not generally found willing to assist or waive their rights without compensation ; his protection should be in the hands of his landlord, the adjoining owner.

I have never been able to understand why a building owner only becomes definitely liable to compensate the adjoining owner and occupier, following a notice under Section 119, for inconvenience which may be suffered ; there is quite as much risk of damage in underpinning a party-wall as in underpinning an external wall.

I suggest that a decision is required as to whether a notice is required under Section 119 as well as under Section 114, where an excavation is proposed. The notice under Section 114 apparently relates solely to the party-wall and not to the remainder of the building.

Now that excavations are carried to such a great depth, the distance of 10 feet from the foundations of an adjoining building is insufficient for safety, and a building owner should be required to give notice to the owners of all buildings within a diagonal line drawn at an angle of 45 degrees from the extreme lowest angle of the proposed excavation. I know of at least one building affected by an excavation on the opposite side of the building adjoining it.

I suppose it is impossible to legislate against the removal of underground water by a building owner ; private litigation must be left to protect the adjoining owners.

At the opposite extreme the building owner is liable to carry up the flues on the party-wall only, or on an external wall built against a party-wall, although with a modern high building the flues of more than one house width away may be affected, and should be remedied equally at the building owner's expense.

The Courts have held that one owner must not overload a party-wall, presumably by superimposed loads on floors, but it is a frequent experience to find the lower part of an old party-wall crushed by the weight of brickwork placed on it when the building on one side of it was rebuilt with several additional storeys, and with steel-framed buildings the party-wall becomes unevenly loaded and in time will bulge. These defects can only be discovered after the lapse of a number of years, and at the present time an adjoining owner has no remedy.

No legal decision appears to have been given yet as to whether Section 38 of the Law of Property Act, 1925, overrides this Part of the Act.

I cannot leave this Part of the Act without wishing that there were a similar procedure in force for the settlement of other differences between building owner and adjoining owner.

PART X.—DANGEROUS AND NEGLECTED STRUCTURES.

Some amendments might be made in the procedure of contesting a dangerous structure certificate. The wording of Section 133, Sub-section (2), should be revised so that it does not require the footnote printed in annotated editions of the Act in order to make it intelligible ; and as the matter is urgent, the arbitrator should be required to issue his award within a shorter period than fourteen days.

Although my own experience has been entirely satisfactory, it seems rather absurd that the ultimate decision as to whether a structure is dangerous should rest with a magistrate who has not seen it, and it would be more logical if the reference were to the Tribunal of Appeal.

So few "neglected structures" are met with, and those are mostly "dangerous structures," that one is tempted to ask "What is a neglected structure?" and the Act does not supply an answer. There does not appear to be a need

for such a lengthy paragraph to deal with a matter "pre-judicial to the property in the neighbourhood."

PART XIII.—SKY-SIGNS.

While the old form of cut-out letter forming a sky-sign has died out, the other forms, such as balloons and flags, which are technically sky-signs according to the definition, may be seen everywhere and appear to be innocuous ; and now we have the electric sign fixed on the face of buildings. The Courts have decided that these are not "structures," although it is usual to apply to the Council for permission to fix one ; but there is no control over the intermittent lights contained in them, and there would be probably hearty agreement if the Council sought such power.

PART XIV.—DISTRICT SURVEYORS.

Although his duties are definitely stated to be to "enforce the execution of the Act," the general public, journalists and coroners have formed a habit of considering the district surveyor as a building inspector. The fact that at one time the appointment was for part time only shows that this was never the intention, and the class of man still being appointed confirms this. It might be advantageous to them if their districts were larger and inspectors were appointed under them on the lines of provincial inspectors so that such accidents as have been caused by the overloading of floors during demolition, or by trench digging close to foundations which it is no part of their duty to supervise, could be prevented by continuous inspection, leaving the district surveyor free to carry out his statutory duties.

It seems improper also that anyone should be required to work for nothing, yet there are many duties imposed on a district surveyor for which no fee is payable, or to perform lengthy and highly responsible work for the very low fees payable in respect of steel frames and concrete build-

ings. It must be remembered that the gross income is uncertain and covers office expenses, clerical staff, and correspondence.

No previous complete Building Act has placed responsibility for the strength of a structure upon the district surveyor as the Third Schedule of the Act of 1930 does.

PART XVI.—TRIBUNAL OF APPEAL.

This Part of the Act relating to the Tribunal of Appeal is probably more open to amendment than any other part. At present this very valuable body is hardly made use of, and it has control over few sections of the Act where it might be constantly engaged on differences of opinion on almost the whole of the Act where the building owner comes in contact with the Council or the district surveyor. The cost of an appeal and its formalities, combined with the delay, prevents its full use under present conditions, and its popularity would be increased if the building owner could appeal without liability for costs other than his own, and if a decision could be given within a few days, while subjects forming a basis of appeal could be dangerous structure certificates instead of the present hearing by a magistrate, the decision of the Public Control Officer as to the design of garages where petrol is stored, and the design of a steel-framed structure.

PART XVII.—MISCELLANEOUS.

The stacking of timber to great heights is almost unregulated, and these stacks would be unmanageable in the event of a fire. It is suggested that a licence should be granted for each future stack, providing for its erection in such a way only that it could burn or fall without danger to the public or adjoining property.

There is no apparent reason why any building should be exempt from Part VIII. of the Act (as to the provision of means of escape in case of fire). Whoever may be the

owner, the safety of the public should be the first consideration, and in many of the buildings named in this Part, such as the Albert Hall and the Guildhall, great numbers of people meet, and in some of them the means of escape is very far from being satisfactory.

Nor is there any constructional reason why buildings belonging to certain owners should be excluded from all the provisions of the Act. The houses on the Duchy of Cornwall Estate and the sets of chambers in the Temple should have official supervision as much as those of local authorities, for example, particularly as by Section 229 they cease from being exempted when they are no longer in that ownership.

In addition to the buildings specially named in this Part of the Act as exempt from some or all of the provisions of the Act, the Courts have decided that every new school is also exempt under the Education Administrative Provisions Act, 1911.

It is suggested that the time has arrived when no building in the closely built-over county area should be exempt from control.

THE SCHEDULES.

Changes are taking place so rapidly in the science of building that as much use should be made of the By-laws as possible ; and clearly the First and Third Schedules are more suitable for incorporation in by-laws than in an Act of Parliament.

So far as the First Schedule is concerned, it is suggested that pugging wood joists with concrete should be prohibited, and that a concrete floor is not really satisfactorily fire-resisting unless all the steelwork is encased ; cases are frequently found where the bottom flanges of filler joists and the whole of the main bearers are exposed to a possible fire.

* * * * *

I have made no suggestions for additions to the Act

such as a general permit to erect glass canopies over the public footway or to form vaults and pavement lights under it, nor have I made any revolutionary proposals for the compulsory arbitration of disputes over light and air or for the compulsory purchase of adjoining property. The necessary safeguards for the latter would be almost impossible to define, however desirable the power would often be, but I think it would be both desirable and practicable to control the depths of excavations which are now carried so far that, combined with the great height of modern buildings, adequate shoring is almost impossible.

Transactions *of* The Chartered Surveyors' Institution

SESSION 1930-1931.

AT THE ORDINARY GENERAL MEETING

*Held at the Chartered Surveyors' Institution on Monday,
9th March, 1931.*

Mr. E. H. LEEDER (President) in the Chair.

NEW MEMBER.

The following new Member was presented by the PRESIDENT for formal admission to membership under Bye-Law 21, and signed the Register:—

Professional Associate :

EATON, WILLIAM ROBERT.

A DISCUSSION took place on Mr. GILBERT H. LOVEGROVE'S Paper entitled

SUGGESTED AMENDMENTS OF THE LONDON BUILDING ACT, 1930.

Mr. W. R. DAVIDGE (Fellow) said it gave him great pleasure to have the privilege of proposing a vote of thanks to his old friend Mr. Lovegrove for what he ventured to

think was one of the most useful Papers read before The Institution for some little time. Those who had studied the Acts must realise the immense amount of work entailed in getting together the material for the Paper. Personally he appreciated Mr. Lovegrove's graceful mention of a Paper which he himself read before the Royal Institute of British Architects so long ago as 1914.

A study of how the present Building Acts developed was fascinating ; the present Acts were practically the lineal descendants of predecessors going back for many centuries, right back to the original Building Assize of 1189. He did not propose to go into the ancient history of all the Acts which Mr. Lovegrove had summarised, but it was interesting to see how the London Building Acts had been an object lesson and forerunner of similar legislation for the control of buildings in many parts of the English-speaking world. The great Act of 1774, for instance, which Mr. Lovegrove described as the forerunner of the modern Acts, was taken out in one of the early convict ships to New South Wales, and the city of Sydney was entirely built, for the first thirty years of its existence, according to the provisions of the London Building Act of 1774—a most remarkable case of transportation!

That had an equally interesting sequel which he stumbled upon accidentally when in Sydney a year or two ago—an ancient petition to the Governor of the Colony, signed in 1829 by most of the leading inhabitants of Sydney, asking that the “oppressive provisions” of the London Building Act of 1774 might be removed, especially those with regard to the district surveyor's fees. So it seemed that the early settlers had to put up, not only with the Building Act but with the surveyor and his fees. The London Building Act was not actually in force in Sydney at the present time, so that it must be presumed that the petition had some effect. The steel-frame and other regulations were, however, still the basis employed in practically every English-speaking community, and it was important to remember, when considering the amendment of the

London Building Acts, the far-reaching effect of those enactments.

Practically the whole of our modern bye-laws started with something which had happened in London. Even the 40-feet street, which was so common, and which was found in modern bye-laws almost everywhere, was introduced in London by, he thought, the Act of 1844. The Metropolis Building Act of 1844 was also noteworthy as being one of the far-sighted Acts which provided for the future. Not only were there no exempted buildings, but there were provisions by which every building, including Buckingham Palace and the other Royal Palaces, and Government buildings of all kinds, were brought under the supervision of the London Building Act ; and from 1844 down to the 1855 Act no building was exempt. Effective control of buildings would never be obtained unless there was fair treatment to all, no matter to whom a particular building belonged.

Another interesting point about the 1844 Act was that it contained a provision allowing Her Majesty in Council to extend the provisions of that Act ; by an Order in Council, the provisions of the Building Act of London could have been extended to any building within twelve miles of Charing Cross. It was unfortunate from the point of view of those who had come afterwards that effect was never given to that provision. Within that radius there were now large numbers of local authorities—some 120 of them—each with slightly varying bye-laws and a different system of administration. General equality of treatment and, as far as possible, equality of bye-laws and particularly uniformity in the interpretation of bye-laws were important.

Mr. Lovegrove drew attention to a very serious defect which was likely to result, if the practice was continued, of allowing buildings to be erected on old foundations in narrow streets. That was probably a natural concession to make to owners at the time the early Acts were passed ; the provision for building on old foundations went back

certainly to the time of the Commonwealth, if not earlier, but the effect was that it was possible to rebuild to a height of 80 feet or so simply because one possessed a little tumble-down building in a narrow street which one could get certified as old foundations. That was something which obviously could not be allowed to continue if buildings of increased height were to be permitted.

Incidentally that section used to be called Section 13 ; he did not know its present number, and he found the system of renumbering the sections, so that it was difficult to recognise " old friends," a little confusing. He agreed the Acts should long ago have been brought into one volume, but to renumber them as a prelude to dismembering them and renumbering them once more caused a certain amount of confusion.

The effect of the Building Acts on the replanning and redevelopment of congested areas would certainly have to be considered, not only from the Building Act control point of view, but also from the general point of view of town planning. Michael Angelo Taylor's Act enabled the borough councils to widen streets or to extend them, but was a little defective because it did not allow for new streets. The power to prescribe a building line was essential, and in practice existed in most cases. The first man who put his building on a street defined the line and more or less fixed it for those who came after.

The first point on which he disagreed was where Mr. Lovegrove said: " There seems to be no real reason why " building should be prohibited on forecourts within " 50 feet of the highway in wide roads such as Brixton " Hill." He saw every reason why it should be prohibited. They owed much to the generation of 150 years ago, which prescribed, in the Turnpike Acts, wide roads and a building line of something like 50 feet. Practically all the wide approach roads to London were formed under the Turnpike Acts, and most of those Acts had a standard width of 150 feet between buildings. The generation which preceded theirs had allowed buildings to go up on forecourts, as

in the case of the Euston Road, but it was undesirable to allow such a practice except as part of a preconceived plan. They would be wanting in their duty, not only to those who planned the streets on such broad lines, but to those who came after them, and to the traffic requirements of the future, if they encouraged building on forecourts save in exceptional cases.

He strongly supported Mr. Lovegrove's suggestions that the Council should have power (1) to compensate owners whose buildings were in advance of the general alignment, and (2) "it should have a similar power" where the buildings were within the prescribed distance "of the centre of the road." He (the speaker) would like to add that they should not only have that power, but should use it. They had had power to prescribe 60-foot streets ever since the 1894 Act, but they had not used it save in one or two exceptional cases ; yet it was essential, if better means of communication were to be secured, that the existing power should not only be placed on the Statute Book but be used.

The law of ancient lights, which Mr. Lovegrove hinted at in various places in the Paper, was always a vexed one, and there would be many varying opinions with regard to it ; but that law, though it was troublesome to the building owner and though many people would like to see it go, had had the effect of securing an openness at the backs of London buildings which was valuable indeed from all points of view. Though it might be troublesome and cumbersome, one had only to go to the United States, where it had been got rid of, to see the serious effects that might happen. Though he was in favour of some ready means of appeal and of settling disputes, he felt that the law of ancient lights should in some form or other be retained ; but it should certainly not be used as a method of blackmail, as it was occasionally at present.

Mr. Lovegrove was in favour of high buildings, and suggested that $1\frac{1}{4}$ times the width of the street had been a rough-and-ready rule. In the case of streets running

east and west, such as Victoria Street or Cheapside, very little sunlight would penetrate to the lower rooms on the northern side if the height of the buildings was anything like $1\frac{1}{4}$ times the width of the street. Personally he was not against high buildings in particular places, but he saw strong objection to giving preference to individual owners, giving them a monopoly of high buildings for certain isolated spots. There were undoubtedly particular cases where high buildings might be sanctioned, but there seemed to be no reason why one or two particular site-owners should be favoured at the expense of the community as a whole. The whole question of higher buildings had to be considered, not only from the Building Act, the traffic, and the fire-safety point of view, but from the general point of view of all concerned. One of the high buildings in New York threw almost a permanent shadow over 9 acres of surrounding property. Desirable, therefore, though a high building might be from the point of the owner of the site, and valuable as might be some of the upper floors, it must be realised that that extra value was obtained at the expense of a considerable area of surrounding property, and if it was 9 acres in the case of one building in New York, a similar building in this country would probably cast a shadow over a much wider area, because the latitude of New York was very different from that of London.

The question of zoning was a difficult and complicated one, but something ought to be done about it. Zoning in a growing community could not be permanent. The residential districts of the West End, for instance, had gradually become commercialised, and it was well known that the natural tendency of industry and commerce was to spread. Zoning was certainly one for which provision might well be made, but it ought to be subject to periodical revision.

Mr. Lovegrove's suggestions with regard to party-walls and means of appeal seemed to him very valuable indeed. He would not deal with them in detail, but he would suggest that in the case of dangerous structures the tribunal of appeal was hardly the right form of arbitration definitely

to decide that point. An individual member of the tribunal might act, perhaps, as the official arbitrator to settle difficulties with regard to particular portions of the Act, but it would be absolutely unworkable to ask the tribunal of appeal to go, say, to Peckham to see if a particular chimneys-stack was dangerous or not. Something more important would be needed before so august a tribunal could be dragged about all over London, and therefore something simpler was required.

The author made a valuable suggestion in Part IX. of his Paper with regard to grillage foundations. Personally he thought there could be no doubt that the growing use of grillage foundations under party-walls raised a number of fresh points which were not considered when the original party-wall procedure was devised. It was of interest to note that the party-wall procedure, which was almost unique in London, had been in practice ever since the original Building Assize of 1189.

He was all in favour of controlling flash lights, and thought Mr. Lovegrove's suggestions for strengthening the powers of the Tribunal of Appeal were sound. The mere existence of the Tribunal had, over a long period of years, the effect of making the Council on the one hand and the applicant on the other reasonable.

The question of possible exempted buildings was an important one indeed. Mr. Lovegrove touched on it in several places in his Paper, and there could be no question that if possible the Crown, the Duchy of Cornwall, the Inns of Court, and others, should be approached with the object of getting some sort of general agreement to go back to the condition of affairs which existed in 1844, when every building was considered as part of the community of which it really formed a part. Mr. Lovegrove said: "It is suggested that the time has arrived when no building in the closely built-over county area should be exempt from control." He entirely agreed.

Mr. Lovegrove's Paper opened out a wide field for discussion which was most opportune at the present moment.

He had much pleasure, therefore, in proposing a hearty vote of thanks to him for the valuable Paper he had contributed.

Mr. HORACE CUBITT (Fellow) said it was with great pleasure that he seconded the vote of thanks to Mr. Lovegrove. He had, like Mr. Davidge, been struck by the way in which Mr. Lovegrove showed the continuity of building regulations over many centuries. Any person, therefore, who was desirous of amending the Act should proceed warily lest he produce amendments the effect of which might not yield the good results intended.

On the question of frontage lines Mr. Lovegrove pointed out that, as the position stood at present in London, it was for the superintending architect to define the general line of buildings in an existing street. He then went on to suggest that the superintending architect should be authorised to define the building line in a new street. Personally he thought that might lead to confusion. The superintending architect was required to define a line of buildings which already existed. When it came, however, to prescribing a building line, presumably that would be the duty of the public authority, the London County Council ; and he thought that in any amendment of the Building Act the Council would take power to do so in the case of new streets. If, however, they did nothing further in the case of old streets, bad conditions would be perpetuated in that the present Act allowed owners to rebuild where they had old foundations. It was a question whether the County Council ought not to apply to Parliament for power to prescribe building lines in certain important existing streets. Probably compensation would have to be paid, although here the question of betterment might also arise ; for if certain building owners were allowed to come forward from the present general line of buildings to a prescribed line laid down by the Council, which might be a give-and-take line in regard to the position of existing buildings, those owners might fairly, he thought, be called upon to make some contribution to the public funds. With a group of buildings in one

ownership, it was usual for the County Council to allow, in the rebuilding, a certain portion to come forward if a certain other portion was set back ; and it might be practicable for that same method of adjustment to be applied through Parliamentary powers, not merely to a short piece of frontage which happened to be in one ownership, but to the entire frontage of a street. It might perhaps sound a little revolutionary that the Council should prescribe a line where hitherto the line had formed itself, but, unless something different from present procedure was attempted, little progress could be made.

When the Act came to be amended the present requirements as to open spaces should be simplified. It was difficult to understand all the provisions of Section 44.

He thought that zoning might well be applied in London, not in the ordinary sense, but with regard to construction. At present it was possible to use, in the centre of the City of London, exactly the same type of construction as in the suburbs. A building could be put up with wooden floors, and a wooden roof, and lined with matchboarding, although the owner who did so created a centre of risk to all his neighbours. It did not seem to him at all unreasonable to provide that in a certain central zone an owner with no regard for his neighbours should be compelled by law to build a fire-resisting building in the way that most owners did of their own accord.

Building administration in London might appear illogical, but it seemed to work, and that was the important point.

With regard to certified plans being kept in a central office, he was inclined to question the value of that suggestion, because certified plans were in the interest of the owner, and not in the public interest at all. The right to rebuild after certification was a concession to the owner, and if he wanted to make use of that concession it was his duty to preserve the certified plan ; it was not a public duty. The actual certified plan was not held by the official, but by the owner of the property.

It might, however, be desirable for the central authority

to keep a record of plans of steel-framed buildings. When erecting a new building adjoining a steel-framed building, it was desirable to know something about the construction of the latter building, and it seemed to him that it might be desirable for the plans of steel-framed buildings to be deposited for reference with the central authority. He thought some such method would be of public advantage in the course of time, for such buildings were increasing.

With regard to the right of appeal to the Tribunal, he had a bone to pick with Mr. Lovegrove, who suggested that there ought to be more opportunities of appeal. Personally he thought the lack of knowledge which he (the speaker) and many of his professional brethren had of the cases where an appeal could be made to the Tribunal showed how well the London administration worked, because, presumably, questions were settled without appeal. Some years ago, however, it was his business to go through the Building Act and ascertain in how many cases there was the right of appeal to the Tribunal. That afternoon he had taken the opportunity of refreshing his memory on the subject, and he found it was possible to go to the Tribunal in nearly all the cases where the London County Council, the superintending architect, or the district surveyor, exercised discretion. One could go to the Tribunal in the case of formation of streets, in the case of certified plans, in the case of general line of buildings, in the case of high buildings, construction of public buildings, air space, many requirements with regard to steel-framed buildings, and in regard to means of escape in case of fire. The fact that almost no one could say offhand, without looking it up, on how many points it was possible to go to the Tribunal of Appeal, and the fact that the Tribunal of Appeal was a very unemployed body, suggested, he thought, that the London administration worked very well.

He wished to conclude by saying how greatly he appreciated the Paper. Many of the points Mr. Lovegrove raised would, he felt sure, prove of interest in the discussion, and be of service to the London County Council in considering amendments of the Act.

Mr. ARNOLD INMAN, K.C. (Chairman of the Tribunal of Appeal) (Visitor) said it was with considerable doubt that he took part in the discussion because, though three or four months' membership of the Tribunal had given him some official knowledge of the London Building Act, he was quite sure most of those present had much more actual knowledge. From his own experience, however, both of those three or four months and for many years previously he would like thoroughly to endorse what Mr. Cubitt had said ; he hoped that those who were drafting the new Act with regard both to procedure and the substance of the present Act would let well alone. He thought it might be said that for the last ten years the average number of appeals to the Tribunal of Appeal had been about one appeal per annum. That supported absolutely and entirely what Mr. Cubitt said, and it showed that, as he suggested, the machinery of the Act had been sufficient to keep people reasonable, coupled, of course, with the efforts of the surveyors where necessary. Moreover, if one took the digest of the law reports and looked up the number of cases which had been fought so long as the digest had existed, one would find that the number of cases indexed under London Building Act was extraordinarily small ; and that, too, reflected the greatest possible credit on the drafters of the various successive Acts, and also on the surveyors who had administered those Acts, and on the lawyers who, when the surveyors had failed with their clients, had advised their clients to settle and not bring the matter into court. With regard to that point, both surveyors and lawyers existed, whatever people might say, primarily to prevent their clients from entering into expensive litigation ; and in defence of the lawyers he must point out that when the surveyors had failed to get their clients to come to terms the case was indeed desperate, and one could not blame the lawyers for failing to secure peace in those circumstances.

There were two points in the Paper to which he desired to refer, one being the question of notices. A short time ago

a balustrade along the staircase in a building divided into floors went wrong and caused the building to be a dangerous structure. The district surveyor served a notice, which was addressed to the owner. The gentleman who brought the notice took it to the ground floor, and was told that Mr. So-and-So lived on the next floor. The gentleman with the notice then took it to the next floor, which was occupied, it so happened, by a tenant who had just received notice to quit and was on bad terms with the owner. The tenant put it in his pocket, and the consequence was that the owner, who would have been perfectly ready to put matters right, had to pay not only for putting them right but also the expenses of appearing to answer a summons for failing to comply with the notice.

When it came to the issue of the summons the County Council had no difficulty in discovering the proper address of the owner, and the summons was there served on him. It would seem that the notice calling on him to do something in default of which he would be summoned could equally well have been served on the owner in the same way.

All those who had imagined improvements in those sections of the Act must appreciate the difficulty of drafting them so as to secure power to the Council to get what was necessary done, and at once ; but that should be combined, as far as possible, with consideration for the owner, and he thought those who drafted the new Act might consider that point.

It was common knowledge that in one part of the Building Act "owner" was defined, and the definition for that part of the Act was quite different from what it was for the whole of the rest of the Act. That, surely, was very confusing. In one part of the Act "owner" meant any person who had any interest in the property (a tenant or an occupier, of the actual owner, or what not), but in the fire clauses portion "owner" meant a person receiving or entitled to the rack-rent. He thought somebody should invent a new word either for the "owner," which included all the people who had an interest in the property, or for the owner

who was merely in receipt of or entitled to the rack-rent, and then one of those definitions ought to be altered. In his humble opinion it was ridiculous to have two definitions in the same Act of Parliament.

He was greatly obliged to the President and Council of The Institution for inviting him to be present, and he had greatly enjoyed reading Mr. Lovegrove's admirable and witty Paper.

Mr. ARTHUR H. DAVIS (Fellow), in supporting the vote of thanks, said that he was not sure whether Mr. Lovegrove referred to the definition of Section 95 in an æsthetic or satirical sense. Personally he thought the definition clear, because it laid down that a building built before 1st January, 1906, was an old building. That meant that a building which on 1st January of the present year would be 25 years old was an old building, so that he thought the Act intended to imply that any building hereafter which was 25 years old might be considered as an old building, while any building of less age than 25 years was a new building.

Mr. Lovegrove referred to Brixton Hill when dealing with the question of building on forecourts, and might be interested to hear a short extract from a contract of sale in connection with a property situate on Brixton Hill, which read as follows:—

“Such part of the said premises as is within 150 feet of the turnpike road from London to Croydon (now known as Brixton Hill) is subject and is sole subject to a provision contained in the 17th section of the Lambeth Enclosure Act, 46 Geo. III., cap. 57 (commonly called the Rush Common Act), and no buildings or erections above the surface of the earth are to be erected.”

The Act did provide a definition for a basement ; it said a basement was any storey of a building under the ground

floor ; but, as Mr. Lovegrove pointed out, it went on to define a ground floor as any building the floor-level of which was not more than 4 feet below the adjoining pavement.

With regard to windows, personally he thought the requirements of the Act were reasonable ; one-tenth of the floor area to be window space and one-half to open was very reasonable. There was unlikely in any ordinary domestic or office building to be such an undue depth that such an area of window space would be other than satisfactory.

On the question of adjoining owners, he thought too great a weight, within the limits, could not be placed on the adjoining owner's convenience, and he referred to a case which had occurred in the Leicester Square area, where a big new building had been recently erected. A party-wall between two premises was about 3 feet thick, and had been strengthened on two occasions previously, so that in its composition there were three different types of brickwork and two of block bonding ; it was not a thoroughly homogeneous mass. The building owner was going to erect a steel-framed construction of considerable size and weight, and it seemed unfair that the adjoining owner should be required to have that party-wall demolished merely to meet the special requirements of the building owner. The difficulty was overcome by the building owner throwing his weights from front to back of his building instead of from side to side.

As Mr. Lovegrove had said, the provisions for preventing the spread of fire were insufficient. One found the London County Council would agree that " Polite " (asbestos composition) sheets 3/16 inches thick were sufficient as a means of preventing fire reaching other parts of the building where there was a garage in the house. That was not sufficiently thick, and nothing less than 6 inches of concrete should be allowed where the garage was formed in the house. That point was important at the present time, because it was becoming a common practice for garages to be built in houses, or for old houses (and par-

ticularly double-fronted houses) to have one of the ground-floor rooms reconstructed into a garage. He thought the danger was serious, because the intense heat caused by a petrol fire was well known.

With regard to storey posts, he thought the author was a little drastic in suggesting there should be no wood storey posts ; the danger of rotting could be avoided by placing the posts in metal or reinforced concrete shoes.

He did not agree with the author as to the omission of the party-wall parapet in a concrete building. The danger did not lie in the concrete building but in its contents, and he could imagine a fire of sufficient fierceness and duration which would start disintegrating the concrete. He thought the parapet afforded some provision against a fire spreading to an adjoining building.

He agreed with the author as to the necessity for fire-brick flues, particularly where large domestic boilers or central-heating installations were placed in old houses. Another serious source of danger arose where anthracite stoves were installed in old houses, where the brick flues were only $4\frac{1}{2}$ inches thick on their front side. This difficulty could be avoided, however, by coring the existing flues with asbestic composition pipes, and filling the space between them and the brickwork with asbestic cement.

With regard to air space under the basement floor, there was a provision for that in Section 75, Sub-section (2), which provided that a floor which was not a solid floor should be ventilated. It was only in a domestic building that a floor which was not solid was likely to be employed.

Most surveyors would have had experience of the difficult problem presented where effective egress in case of fire had been ruined by lack of possible means of escape to an adjoining owner's roof. One did not like to say anything prejudicial to rights of ownership, but where means of escape from the horrors of fire could be made good by egress to an adjoining owner's roof, some provision should be made to allow for it.

Another point related to the danger of fire was that, in

his opinion, the limit of twenty persons was too high ; personally he thought that places where more than twelve persons slept or worked should be brought under the provisions of the fire-escape sections of the Act ; and, further, he thought the onus of notification should be on the person in whose premises those twelve persons slept or were employed. Moreover, no person should be allowed to be employed in a basement unless there were an alternative means of egress to the street, and egress from basements by special flap pavement lights to the street should be permitted.

With regard to party structures being dangerous, Mr. Lovegrove complained, and rightly, that the procedure might be unduly slow. The district surveyor seemed, however, to be fully protected by Section 139 of the Act, because he had only to certify that a building was really dangerous to get a complete clearing ; for example, a party-wall between two buildings in Oxford Street recently failed at 12 o'clock (midday), and by 4 o'clock the same afternoon there was not a single person either employed or living in that house.

He would like to have the legal references to *Thornton v. Hunter*, so that one could investigate the case, because Section 113, Sub-section (6), of the Act did give the right to the building owner to place footings of an external wall on an adjoining owner's land.

On the question of the adjoining owner refusing to appoint a surveyor, in over twenty-three years' experience he had only known that happen once. As soon as an adjoining owner heard of a party-wall notice, or anything affecting his property, he gladly consulted his surveyor, and if the requisite notices were given to the adjoining owner, the procedure was simple.

With regard to Section 119, Sub-section (3)—and the notice which was generally call " Form B "—he thought it was unnecessary to give a party-wall notice under Section 114 as well, unless the new building, being within 10 feet of the adjoining owner's building, would in any way interfere with the party-wall. If it did, so that underpinning became

necessary, he thought two notices should be served, one under each section.

So far as underground water was concerned, there was, he thought, no ownership in undefined streams of water, and therefore the onus of keeping any trenches, and so on, dry and free of water and preventing any danger to adjoining owners' premises must be on the building owner during the operation of his works, and he should take such steps as might be necessary to prevent any after-effects which might otherwise occur.

Lastly, he would like to refer to some recent correspondence between an important firm of builders and the London County Council's solicitor, who had stated that a district surveyor's assistant, unless he were a deputy district surveyor or an assistant district surveyor appointed under Sections 158 and 159 of the Act, had no right to go on to any building in course of erection or alteration, but the district surveyor could take his assistant with him if he so desired.

Captain G. E. PIERREPONT, M.C. (Chairman, Building Acts Committee, London County Council) (Visitor), said that he wanted in the first place to say how grateful he was for the opportunity of hearing the debate which had taken place. The amendment of the Building Acts was shortly to be undertaken, and it would be of the utmost value to him to have a copy of Mr. Lovegrove's Paper and a report of the discussion.

When he first heard people railing at the London Building Acts he rather hastily came to the conclusion that they were either jerry builders or people who wanted to build skyscrapers ; that they were afraid of restrictions, and wanted to get rid of the control of the London County Council for that reason. Since reading the Paper and listening to the discussion, however, he had found he was entirely wrong in that surmise, and that there were indeed good reasons why the amendment of the Building Acts should be taken in hand.

Referring to the lecturer's remarks as to the Council's administration of the Acts, he hoped no one would think the London County Council was really influenced by selfish motives. In the first place, the Council was not an entirely homogeneous body, it was divided up into some 25 or 30 Committees, each one of which had its own views and its own interests to protect ; and they were not always entirely in harmony with one another. The Building Acts Committee had been at loggerheads at times with the Housing and Education Committees, both of which had endeavoured, in the interests of economy, to do things which the Building Acts Committee did not permit private persons to do. He was glad to say that so far the Building Acts Committee had been able to resist the endeavours of the other Committees to which he had referred, and to see that they kept the law in the same way as the general public.

Brixton Hill had been an unceasing source of trouble to the Council. In 1806 Rush Common was enclosed, cut up and sold to the various frontagers, but on the condition that they should not place any building or erection on it. Unfortunately the definition of "a building or erection" was extremely vague, and a perpetual fight had been going on between the London County Council and the Lambeth Borough Council and the frontagers as to what they might or might not put on that land. Between the limits of a brickhouse and a wheelbarrow there were infinite possibilities, and therefore if one drove out through Brixton to-day one would see the former Rush Common covered with a heterogeneous mixture of stalls and so on, some of them on wheels and some with temporary foundations, all of which the Council had been trying to chase away but only with the greatest difficulty.

He fully agreed with what Mr. Lovegrove had said about the numbering of streets, and thought that every house and shop should have a number displayed upon it.

The members would probably be interested to know exactly what steps the London County Council was going

to take for the amendment of the Building Act. On the 26th January last the General Purposes Committee of the Council brought up a report of which the following was an extract:—

“ Having regard to the importance of the subject and to the public interest evinced therein, we are of opinion that the time has arrived when the London Building Act should be examined by an impartial and authoritative body, representative of the many interests concerned, and that the Council should refer the whole question to it for investigation.”

“ We accordingly suggest that an Advisory Committee should be set up consisting of twelve members of the Council, and one representative to be appointed by each of the under-mentioned bodies: The Metropolitan Boroughs Standing Joint Committee; The Royal Institute of British Architects; The Chartered Surveyors' Institution; The Institution of Civil Engineers; The Town Planning Institute; The London Master Builders' Association; The National Federation of Building Trade Operatives; and the London Employers' Association, Limited.

“ We think such a Committee will not be unduly large and yet be thoroughly representative.”

The business of amending the London Building Act of 1930 would now be vigorously taken in hand, and he hoped it would meet with the approval of The Institution.

Mr. GEORGE LANSDOWN (Fellow) said that in dealing with Part I. the author suggested that shops over a small area should be included in “public buildings.” That seemed rather drastic, for it might include small lock-up shops, and to make such shops “public buildings” would bring them under the clauses of the Building Act, which would be very onerous on the builder of the shop.

The Chairman of the Building Acts Committee of the London County Council being present, it was, perhaps, a

little awkward to ask Mr. Lovegrove if he could say what, under Section 7, was the meaning of "beginning to form or lay out a street." The London County Council in a number of instances had suggested that where there was a backyard which had, for instance, an entrance to one building and a stable, if that stable were taken down and made into three or four garages, that was "beginning to form or lay out a street." He had had several cases of that kind in his office. He thought, therefore, the Act should be amended to make it clear what that expression meant.

With regard to the naming and numbering of streets, the author said that numbering should be compulsory and should be on a similar basis throughout the county. He had always understood from the Nomenclature Office of the London County Council that all the streets in London were numbered by taking St. Paul's Cathedral as the centre. In the case of every street radiating from St. Paul's the numbers began on the left-hand side 1, 3, 5, and so on ; and on the right-hand side 2, 4, 6, and so on. There was some time ago a bye-law of the London County Council to that effect. In the case of the other streets, running between those radiating streets, the numbering began, odd numbers on one side and even on the other, from the end nearest the most important street. He understood, therefore, that the streets of London were numbered as Mr. Lovegrove apparently suggested they should be.

There ought, as Mr. Lovegrove said, to be some control over the height of buildings in narrow streets, even in the case of those laid out before 1862. There were many instances where streets had become almost main thoroughfares and which contained houses laid out before 1862. He was dealing now with a case where the owners of some property were putting up in a very narrow street a building 90 feet high. They applied to the County Council for permission to put up this building and set back 4 feet 10 inches so as to allow them to go a little higher than the ordinary limit. If the adjoining owners went to the Tribunal of Appeal, the building owners would say "We have a right to

“ come forward without setting back 4 feet 10 inches and “ to go up to 80 feet with two storeys in the roof.” The only remedy was an action for damage to the lights affected; but in this case the building owners could acquire the property on the other side of the road, and could put up in a street 29 feet wide buildings 80 feet high with two storeys in the roof, making a sort of tunnel of what was really a main thoroughfare. That did not seem right, and should, in his opinion, be made impossible.

The phrase “ adapted to be occupied by more than “ twenty persons ” should be more clearly defined ; in many cases it was very difficult to interpret it.

Like Mr. Davis, he would like to know more about *Thornton v. Hunter*. Mr. Lovegrove said “ the building “ owner has no right to place footings on the adjoining “ owner’s land, notwithstanding Section 117, Sub-section “ (6).” He thought Mr. Lovegrove referred to Section 113, Sub-section (6), and not Section 117, but he had always understood the building owner had that right. Perhaps Mr. Lovegrove could say a little more on that point.

With regard to the Tribunal of Appeal, he had had cases in which it was not possible to appeal to that Tribunal, even in cases where the London County Council or the Superintending Architect had discretionary powers. One in particular concerned Section 227 of the London Building Act, which would have been taken to the Tribunal had that been possible.

Mr. LANSDOWN went on to refer to the amendments that had been suggested, one being that the Borough Councils should take over the duties and powers of the district surveyor. As regards the Advisory Committee, the Borough Councils considered that it was unfairly constituted and would ask for increased representation. He suggested the Royal Institute of British Architects and the Chartered Surveyors’ Institution were greatly interested and knew a lot about the Building Act and building in London, and should therefore have greater representation than one member each.

In conclusion, he would like to add his thanks to Mr. Lovegrove for his Paper.

MR. PIERREPONT, referring to the point raised by Mr. Lansdown as to the composition of the Committee, pointed out that the London County Council was an elected body, responsible to the people of London, and that it was doubtful how far the London County Council had the right to delegate its powers to outside persons who were not so elected and who were not responsible to anybody. The Council was responsible to its electors.

MR. C. H. BEDELLS (Past-President) said that as the Council had done him the honour of asking him to represent The Institution on the Committee which was being set up by the London County Council, his duty that evening was not to speak but to listen to what others had to say, so that he could make it his business to see that the views expressed by the members generally were represented to the Committee when it met. The function of that Committee would not be a roving commission on the London Building Act, but to direct its special attention to the amendments required in building legislation as a consequence of the modernisation and alteration of methods of building construction.

He did not therefore propose to say much about Mr. Lovegrove's Paper ; it comprised about sixty suggested amendments with most of which he was in accord, though he disagreed with certain of them. He proposed to say a word, however, on one or two questions which had come to the front as a consequence of modern methods of construction, and which illustrated the necessity for some amendment and revision of the London Building Act. He agreed with other speakers that that Act and its predecessors had answered their purpose exceedingly well and worked exceedingly smoothly.

The first point to which he desired to refer concerned the questions that arose as a result of steel-framed con-

struction, and the second related to deep basements. The problem with regard to the first might be stated as the relative rights and responsibilities of adjoining owners. Under the London Building Acts it had been possible in past years for a building owner to erect a new wall against an existing party-wall, but with the advent of the steel-framed structure that was happening in many more cases than before. The building owner erected a steel-framed structure rather than interfere with an existing party-wall, and the question arose what was going to happen when the adjoining owner, in his turn, became a building owner ; if he wanted to do the same thing and build a steel-framed structure, on what line could he do it? The land between the first steel-framed structure and the centre of the party-wall was land on which he had no right to build. Was he obliged to leave a space between his steel-framed structure and that first erected, or should not the Building Act make it possible for the second building owner to erect his structure adjoining that which had previously been erected. It could not be in the interests of good building that there should be a space of 9 to 18 inches between two steel-framed structures, and it was not in the interests of anyone to keep up the original party structure and waste the whole of the space it occupied.

It would not, perhaps, be unreasonable to suggest that where one building owner had exercised his right to put up a steel-framed structure alongside an old party-wall, the adjoining owner, when he became a building owner, should have the right to erect a steel structure alongside that which had been erected, subject, if it was thought equitable, to his being given and exercising the right to purchase the land on which the moiety of the old party structure formerly stood.

Arising out of steel-framed structures was the question of grillages. Mr. Lovegrove suggested they should be allowed to project on the land of the adjoining owner provided they were at such a depth that they were not likely to be a nuisance to him in the future. If that was to be

the criterion, the surveyor to the adjoining owner was placed in a somewhat difficult position, because in determining what to ask as to the depth to which the grillages should be constructed, he might be doing his client a disservice ; the deeper he might desire to make those grillages extend so as not to become a nuisance to him when he wanted to build, the more he jeopardised the stability of his own client's building. Personally he thought there should be no right to extend beyond the limit of the building owner's land. In some cases projections might be definitely unobjectionable, but in the case of this occurring on the line of frontage or back frontage, the presence of grillages might greatly complicate the position in the future. The question of whether projecting grillages should or should not be permitted to extend should rest with the adjoining owner, and if he objected for good reason, the cantilever principle should be adopted.

Details of their proposed depth, construction and approximate loadings should form part of the information supplied to the adjoining owner on the notice. It ought to be compulsory for anyone who wanted to have grillages adjoining a party-wall to show exactly the extent of those grillages, the depth, and also the loads it was proposed to impose upon them. He had recently had a case where damage was caused and localised close to the position of grillages in an adjoining structure, and he had had the greatest difficulty in ascertaining exactly what had been done, because his clients and the building owners were at arm's length, and, unfortunately, his clients had previously given written consent to the building proceeding, and therefore, as surveyor to the adjoining owner, he had not the ordinary facilities which the London Building Act would give him for obtaining the necessary information. Moreover, if grillages were to be permitted to extend beyond the owner's land limit, there should be power to the adjoining owner to make requisition on the building owner on the lines of Section 115. Where a building owner erected a new party-wall the adjoining owner had the right to make cer-

tain requisitions, requiring him to build flues and chimney-breasts, and so on, for his ultimate convenience, and there ought to be a corresponding right, if grillages were to be allowed to project, for an adjoining owner to serve notice on the building owner to provide for what in his turn would be the necessary foundations, of course at his own expense.

Advantage might also be taken of the new Building Act to settle the question whether it was incumbent on the building owner to serve one or two notices in the case of the underpinning of the party-wall. That ought to be definitely settled in the Act, because the condition as to compensation was different in the case of work carried out under the 10-feet notice from what it was under a party-wall notice.

Next as to deep basements ; Mr. Lovegrove proposed that a building owner should be required to give notice to the owners of all buildings within a diagonal line drawn at an angle of 45 degrees from the extreme lowest level of the proposed excavation. Was that suggestion based on any *ad hoc* research? Had any serious research been directed to ascertain limits of an area within which damage from a low basement might be apprehended and consequently the service of a notice necessitated? A distance of 10 feet from a deep basement was clearly inadequate, and the provision ought to be greatly extended. He was inclined to think that even an angle of 45 degrees from the lowest limit of the excavation was not enough.

The subtraction of underground water was in his opinion a more serious danger even than the building operations themselves, and he noticed on that point Mr. Lovegrove said " private litigation must be left to protect the adjoining " owners." That was somewhat cold comfort, because the existing state of the law, as far as he could remember it, was that, there being no property in underground water, as such, no proceedings could be taken against a building owner for abstracting it. If it could be shown that he had abstracted silt and soil with the water, there might be a chance of obtaining protection or redress, but it was, of course, a most difficult thing to prove that the abstraction of foreign matter

as well as water had been the cause of subsidence of one's building. In view of the damage which had occurred recently in the case of really important buildings, it was questionable whether there should be anything like the latitude there existed at the present moment to construct deep basements irrespective of the possibility, or even the probability, of serious damage occurring to adjoining property.

If it was to be permitted, there were certain things which ought to be provided for. Adjoining owners within the radius should be entitled, quite irrespective of party-walls or anything of that sort, to inspect the building operations and to have definite notice of pumping ; they should have an opportunity of inspecting and of sampling the water taken from the subsoil. Personally he had grave doubts whether the time had not arrived when deep basements should be prohibited altogether in built-up areas. Whether that was too drastic a proposal he was not sure, but he had heard of a case that afternoon in, he believed, the City, where the excavation for the lowest storey was 67 feet below the pavement level. If one visualised that, and realised that it was almost impossible, except by utilising piling or coffer-dam construction, to prevent the abstraction of underground water, he thought it might be agreed that one or more owners for their selfish enjoyment should not be allowed so seriously to jeopardise neighbouring property, the owners of which might not be able to prove exactly the source of the damage or take adequate steps to protect their buildings.

Where there were deep basements, and where considerable excavations took place below party-walls and so on, it should be an obligation on the building owner to supply the adjoining owner with a record of the excavations and the foundations which had actually been carried out, because it was seldom that the section supplied with the party-wall notice, or which was attached to an award, was adhered to in the actual building.

He would like, in conclusion, to join with others in thanking Mr. Lovegrove for his Paper, which bristled with

points one would like to discuss. If any members had any points on the Building Act which came within the purview of the London County Council Committee, he would be exceedingly glad to receive suggestions or particulars of such points and to do the best he could with them.

The vote of thanks was then put by the PRESIDENT, and carried with acclamation.

Mr. GILBERT LOVEGROVE, in reply, thanked the members for their expression of appreciation, and said he had thoroughly enjoyed listening to the discussion. He said he would take advantage of the President's offer to reply in writing to the various points which had been raised.

The proceedings then terminated.

Mr. LOVEGROVE forwarded the following written reply to the discussion :—

The high buildings in America are erected largely for the purposes of advertisement, and owing to the great cost of building and the large area which must be devoted to lifts, it is probable that they are not otherwise a commercial success, so that Mr. Davidge need not be unduly afraid the precedent will be followed in London.

My suggestion that the duplicates of certified drawings should be kept at the County Hall was solely in the interests of safety, the originals returned to the owners being frequently lost.

Mr. Cubitt is correct that the present Act provides many opportunities of reference to the Tribunal of Appeal, in fact, they number thirty-five. I should like to see still more opportunities and a less cumbrous procedure. It is, perhaps, too much to expect a member of the Tribunal to inspect a dangerous structure, but my objection

to the present system stands on the fact that the ultimate decision rests with someone who has not seen it. The power given to the district surveyor under Section 139 is so great that it is rarely used, and could not be used to hasten an arbitrator's decision ; it only protects the inmates of the building, not the general public. Practically all new buildings are required to have two exits from the basement ; my suggestion was that most shops should be provided with fire exits, not that they should be constructed according to the rules for public buildings.

Mr. Davis made several useful criticisms, but misunderstood my reference to underground water, the removal of which during the formation of very deep foundations will be the cause of trouble in the future ; once the retaining walls are in, the danger ceases.

I agree that for the average dwelling-house the provisions of window area are sufficient, but in the more crowded neighbourhoods where rooms are not of normal proportion, and in some badly planned flats, it is possible to find rooms insufficiently lighted (although they are in accordance with Section 76), as it is possible the windows may have been put at the end of a long side wall. The same applies to ventilation under basement floors which need only have " a space " under sufficient to admit of ventilation by means of air bricks or otherwise " ; this wording of Section 75 does not require that the space should be ventilated. I think that if a fire were sufficiently fierce to disintegrate a concrete roof and that of an adjoining building, the party-wall would also have perished, so that a parapet between the two would not serve any useful purpose.

There are still many streets with the houses numbered consecutively, *e.g.*, Cheapside, and many premises, particularly shops, which are not numbered.

The most original suggestion made during the discussion was that by Mr. Horace Cubitt, that the county areas should be zoned according to methods of construction, the buildings in the central area to be fully fire-resisting, with a gradual relaxation of the requirements towards the outskirts.

The difficulty is that whole trades migrate, and a district occupied generally by a safe trade may become the centre of an inflammable trade ; such changes have happened frequently. There might also be one large building occupied by a dangerous trade in a lightly regulated district.

I agree with him that the most difficult part of the Act is that dealing with frontage lines, and my suggestion of a complete survey of the county with the building line defined in each street would remove all difficulties.

The case of *Thornton v. Hunter* is reported in the *Building News* of 4th February, 1898. It refers to Section 87 of the 1894 Act, and it was decided that what appeared to be a party-wall was two independent walls built respectively on the two owners' own premises, and the adjoining owners obtained an injunction to restrain the building owners from erecting or allowing to remain erected any wall or any footing upon the land of the adjoining owners. The building owners contended that the London Building Act, 1894, gave them the right in the circumstances to place footings upon plaintiffs' land for the purpose of rebuilding or building a new wall. The judgment was that the defendants had an external wall on their own land, and had committed a trespass in placing footings and foundations on plaintiffs' land, and that plaintiffs were at liberty to remove them, Mr. Justice Romer holding that the London Building Act did not give the building owners a right to put their footings upon the adjoining owners' land.

PAPER 533.

UNIFORMITY IN THE VALUATION OF PROPERTY FOR RATING PURPOSES.

By James R. Toovey (Professional Associate)
(*B.Sc. (Est. Mgt.) London, Special Diploma in Rating*).

*To be read at the Ordinary General Meeting of The
Chartered Surveyors' Institution on Monday, 13th
April, 1931.*

Of the four accepted principles of taxation, the one which is readily remembered and as readily quoted is "ability to pay"; it is also the one which provides the most fruitful source of argument both in public and in private.

The statute of Elizabeth stated that "competent sums of money . . . were to be gathered out of the same parish according to the ability of the parish." With the result that so much tension arose between the rate collectors and the ratepayers that in 1743 it was necessary to pass an Act because "great inconveniences do often arise in cities . . . by reason of the unlimited power of the churchwardens and overseers of the poor who frequently on frivolous pretences and for private ends make unjust and illegal rates in a secret and clandestine manner."

The final blow, so far as local rating is concerned, to this principle, upon which modern economists are so keen, was struck in 1840, whereby it was made unlawful to tax an inhabitant in respect of profits of stock in trade or any other property for or towards the relief of the poor; which has caused some economists to assert that local rating has degenerated into a tax upon houses and land.

Whilst it may be presumed the Legislature was able to make the rate collectors honest, it was not able to satisfy

the ratepayers that they were being assessed on a fair basis, so that we find in various years during the nineteenth century Acts of Parliament were passed with the object of making the payments to the relief of the poor on uniform bases.

On perusing the preambles to the statutes which have been made *inter alia* to advance this important object, we find the Act of 1862 (under which Assessment Committees were constituted) was passed, because it was "expedient" that more effectual provision should be made for securing "uniform and correct valuations, &c." The Valuation (Metropolis) Act, 1869, was passed "to provide for Uniformity in the assessment of rateable property in the Metropolis" (spelt with a capital "U"). The preambles to these two Acts suggest the "passive" tense, but the Act with which we have now become familiar, the Rating and Valuation Act, 1925, uses a much more "active" term by "promoting" uniformity. The key-word in the 1925 Act is spelt with a small letter, as though the draughtsmen was not so convinced of the success which would attend his efforts as had been his predecessors; quite a number of us, however, consider he was too modest.

Both the Advertising Stations (Rating) Act, 1889, and the Rating Act, 1874, provided elaborate directions for the assessment of the four classes of property with which they dealt, but so far as sporting rights are concerned, the Derating Acts have made the provisions of the Act of 1874 a mockery in so far as it is quite easy for a landlord and tenant to make an arrangement whereby sporting rights on agricultural land automatically pass out of rating. I know of no other instance of such a lack of uniformity of assessment where, by a private arrangement, a Rating Authority can be so easily forced to expunge an item from the valuation list.

The latest Act to be passed with the object of promoting uniformity is the Railways (Valuation for Rating) Act, 1930, and it is interesting to note the preamble states it is "to amend the law relating to the valuation for rating

“ purposes of hereditaments occupied by railway companies, &c.” The wording of such sections as 4 (2) and 11 (5) is an innovation in a Rating Statute, which must make some rating surveyors feel a little sceptical for the success of an Act which is intended to value the largest hereditaments in the country without recourse to the familiar phrase “ at which the same might reasonably be expected to let, &c.” The usual procedure in regard to appeals has been considerably altered, in that if a railway company, the valuation committee of a county or a county borough council disagree with the determinations of the Joint Authority or the Railway Assessment Authority, they may appeal direct to the Railway and Canal Commissioners, from whose decision a further appeal on law may be made direct to the House of Lords. This is the first instance of moving the responsibility for uniformity of valuation from the local authorities to a central authority, and it is also of importance to note that whereas the assessments of railway-owned canals, docks, and harbours will be decided by the above-mentioned authorities, the assessments of those properties when otherwise owned will be in the hands of the older and more familiar authorities. It is, of course, well known that such law as we have touching the subject, and, for that matter, other hereditaments which are valued by reference to the accounts, is entirely “ case ” law. Indeed, in spite of the zeal with which the various Acts for promoting uniformity may have been drafted, surveyors have been, and still are, very much dependent upon the results of “ case ” law, together with the practice which has been built up by common consent, over a long period, for uniformity in the valuation of various classes of hereditament. It may, therefore, not be inopportune to refer to a few of the more important decided cases which bear on the subject:—

R. v. West Middlesex Waterworks (1859).

During the judgment the Court said: “ It is bound
“ to protect the occupier from being rated beyond the

“rateable value of the undertaking as a whole.” Which was approved in the leading judgment in the Kingston case.

Criticism has already been levelled against the 1925 Act in that no provision was made to ensure this judgment being put into practice.

The Central Valuation Committee have met the representatives of seven public utility associations, and have appointed a special sub-committee to report ways and means for securing uniformity in the valuation and the allocation of the total value to the various rating areas concerned. The difficulty does not arise so much in determining the total rateable value of these undertakings, but in apportioning that value. Rating Authorities still remain the bodies responsible for making the valuation list, whilst assessment committees (usually covering several rating areas) can exercise their influence in producing a measure of uniformity, although no provision is made in the Act of 1925 to this end. It is, however, necessary for the purpose of securing uniformity in the assessment of this class of hereditament to have even larger units of authority such as “counties.” Where the Rating and Assessment Authorities have accepted the advice of the County Valuation Committee a greater amount of uniformity has been secured. There remains a further difficulty in cases where the undertaking extends into more than one county, but with the assistance of the County Valuation Committees, very important steps have been taken to secure uniformity, which, so far as a number of undertakings in the area with which I am familiar are concerned, have provided not only uniformity but smooth working both in valuing the undertaking as a whole, and in making additional assessments in respect of extensions. Such procedure is, of course, within the powers of County Committees, and whilst of assistance to the average Rating Authority, is of equal assistance to the undertakings in avoiding the necessity for dealing with several individual authorities who might not approach the question from the same point of view.

R. v. School Board for London (1886).

It was decided in this case that the "contractor's basis" provides *prima facie* evidence of the value of a statutory school. But that in applying this basis one must look at all the possible tenants, and not exclude the owner who himself occupies the premises.

The "contractor's basis" was used in valuing all schools for a number of years, but since the 1925 Act a method more commonly used is that of adopting a unit value per scholar according to the average number on the roll. It seems to me that this method limits the assessment to the present occupier and the use to which he himself chooses to put the particular school. Moreover, the value of the school may be materially affected by the personality of the particular occupier, which one is always being counselled studiously to avoid.

*Dodds v. South Shields (1895).**Cartwright v. Scolcoates (1899).**Grant v. Knaresborough (1928).*

The result in short of these three cases appears to be that it is illegal, mischievous and oppressive to enquire into the gross receipts, outgoings, tenant's capital, &c., but that where such evidence is brought forward it is admissible in order to prove the capacity of the licensed premises for doing business.

That all of these cases are for our guidance and are an aid to uniformity of assessment, who will deny? Yet who will refuse the comfort which this mischievous information gives; for if it be mischievous to seek, it must be equally mischievous to accept. Licensed premises are some of the most difficult hereditaments which have to be assessed, for neither tied-rent, area, accommodation nor takings are conclusive evidence.

In those counties where the Rating Authorities agreed to accept the valuations of one professional valuer for licensed

premises, the most practicable step towards uniformity was made, but any less comprehensive scheme would not be likely to provide such reliable results.

Double v. Southampton (1922).

In this case it was decided that to revalue a proportion only of the licensed premises in a parish and to leave the remainder at the existing assessment is unfair and unequal.

Hunter v. Swindon (1922).

This case decided that it was unfair and unequal to revalue a particular class of property in a parish if the rental value of other classes of property has also altered.

Both the above cases were decided under the Union Assessment Acts, which had one serious fault, now remedied by the 1925 Act, viz., the fact that no provision was made for periodical revision of the lists.

If any particular type of property appeared to the overseers to have been the subject of a marked alteration of value, they might proceed to make a supplemental list dealing with the particular hereditaments affected ; two classes of property which they had especially in mind were licensed premises and railways. The above decisions appear, therefore, to have been entirely sound under the earlier Acts of 1862 and 1864.

When a County Valuations Committee is seeking to unify assessments under the present law, one occasionally hears these cases cited in opposition to the Committee's efforts. Upon reference to the relevant sections of the 1925 Act, I find no reason to assume that a County Committee should be hindered in its efforts by either of the decisions quoted above. On the contrary, I do not think the Committee is in any different position from any ordinary ratepayer who may object either to the assessment of his own property or that of another ratepayer's on the ground of

lack of uniformity of assessment. I think it is for the Committee to carry out its duties to the best of its ability.

Stirk v. Halifax (1922).

Where the revaluation of a certain type of property was being effected by making a fixed percentage adjustment of the existing assessments, it was held the supplemental list was bad and of no effect.

It is unlikely this case will have to be cited in the future ; yet it may be necessary to remember there is a tendency to value on arbitrary bases, instead of making a correct valuation of each individual hereditament upon its own merits.

It was unusual before the War to lodge an objection to the assessment of a property because of unfair treatment as compared with other properties. *Rebus sic stantibus* was applied to the hereditament under review, which was usually decided entirely upon its own merits or demerits.

Pointer v. Norwich (1922).

In this case a new slaughter-house had been erected and assessed. In order to find if he had been correctly assessed, the occupier compared the value of the only other similar type of premises in Norwich, with the result that he considered himself to be aggrieved. The overseers complained he had not given notice to the occupier of the premises with which he was seeking to make comparison ; but it was held that unless a rate-payer is aggrieved by the assessment of the premises quoted, notice need not be given to the occupier of them.

In other words, if the assessment quoted is considered correct, such notice need not be given to the occupier. (This is now made clear by the provisions of Sections 26 and 37 of the 1925 Act.)

Since 1922, and more particularly since the new valua-

tion lists came into force, this case has been quite freely quoted. When the facts relating to any particular property with which one may be dealing do not of themselves justify objection to the assessment, a further step may be taken by comparing the assessment of other hereditaments. Without at the moment extending the theory of de-valuing rentals, it is necessary, in short, to find the basis upon which the Rating Authority appear to have assessed the comparable properties.

This basis is then applied to the hereditament in question (with all reasonable modifications for variation in position, &c.), and if any difference between the Rating Authority's valuation and the result of the above procedure is found, then there is *prima facie* a cause for objection.

It is very necessary, however, that the various properties should be truly comparable, and that the properties chosen for comparison should be a fair sample and not those which may be most favourable. In this connection it is necessary to quote—

Trustees of the Archdiocese of Cardiff v. Pontypridd A.C. (1930).

This case decided in particular that a church not exclusively reserved for public religious worship is not entitled to relief under the Poor Rate Exemption Act, 1833.

In his judgment the Lord Chief Justice dealt with a point which had been raised concerning other similar hereditaments which were occasionally used for recreative purposes, but which uses, on the facts, were only of slight importance as compared with those of the premises in question. He said to argue "that if a rating authority wrongly omitted something which ought to be included in the list, therefore it ought to exclude others came to this—if some are unfairly treated, none must be fairly treated, and the Acts must be universally misapplied."

I am not certain to what extent this latter quoted case may affect the application of *Pointer v. Norwich*, and the practice of making comparison with other properties (as apart from the facts of the case in review) may be concerned, but in one of two recent Quarter Sessions cases where appellants have admitted the valuation of their premises *per se* is correct, they have been excluded from comparing certain properties and so seeking reduction to the alleged level of value of those properties.

Uniformity of assessment is one of the chief aims of the 1925 Act. There are four bodies created under the Act, all of which should include uniformity of assessment in their efforts ; and therefore if the authority of first instance in this quest has properly carried out its duties under the Act, some measure of uniformity will have been attained. Errors either of fact or judgment are bound to arise, and it is to rectify them that the ratepayer is primarily given the right to object to his own assessment, and, secondly, to any other assessment which he considers to be incorrect. If having accepted the assessment of several comparable properties, and in so doing he finds he is over-assessed, it is for the Rating Authority to justify the exclusion of the evidence of the comparisons, on the ground either that they are not properly comparable, or that *prima facie* some mistake has been made, which the ratepayer would be more correct to seek to rectify than to profit by.

Poplar A. C. v. Roberts (1922).

In this case it was stated that the actual rent is not the conclusive evidence of value unless, indeed, it happens to coincide with the rent which the hypothetical tenant might reasonably be expected to pay in the familiar legal circumstances.

The Central Valuation Committee in the First Series of Representations recommended Rating Authorities to ascertain the level or standard of rental value, for which purpose

the returns in respect of *every* hereditament should be considered. The Committee also recommended that in fixing assessments excessive and low purchase prices or rents should be disregarded, in so far as they point to an annual rental above that of similar properties estimated after reference to the returns.

In the first case, those of us who have had to estimate the level of rental value will readily agree the task set, though easy to define, was most difficult to perform, in so much that one often hears "the returns are of little or no use." I think such a statement sometimes shows that the person making it was more disappointed by the evidence which the returns afforded in not being in agreement with his own predetermined ideas than by the sparsity or unreliability of the information given. It was, and will be at the next revaluation, essential that all the available evidence as to annual value should be tabulated, for however much this evidence may vary, it is possible to derive some assistance from the returns which is more conclusive in fixing the standard of rental value than personal opinion.

And in applying the definition of "gross value," which, as the Central Valuation Committee agree, is a valuer's job, it is important to note that the modification "reasonable" is upon the "expectation" and not upon the "rent."

It is because Rating Authorities quite naturally have had different opinions upon the reasonable rents of houses—just as they would have had in determining "the rents reasonably to be expected"—that the County Valuation Committee are called upon to see that uniformity in the gross or net annual values of all hereditaments is obtained throughout the area of their administration. I exclude rateable values, because the De-rating Acts, by providing an arbitrary procedure for calculating rateable value, have perforce caused a lack of uniformity.

One occasionally hears that the standard of rental value has been obtained by making a percentage deduction from the average rents obtaining in the zone under review. This must be a very dangerous practice, which necessitates very

ample proof as to the correctness of the chosen factor. It needs little imagination to visualise the trend of cross-examination by "my learned friend" when any such procedure has been followed and the difficulty of substantiating the percentage adopted.

Twitchen v. Alton (1924).

In this case a rule-of-thumb method had been used to increase the value of land consequent upon the redemption of tithe rent-charge. It was held that upon the happening of any event which affects the assessment of a hereditament a purely arithmetical calculation is not sufficient, but the altered circumstances must be taken into account in revaluing the said hereditament.

In this connection it may be well to state that a Rating Authority should seek professional guidance before proposing any amendment of an assessment upon which, for the purposes of the valuation list, they were professionally advised. Instances such as the amalgamation or division of hereditaments come to mind, in which an arithmetical calculation would appear to be correct, but would, in fact, lead to unfairness. Some Rating Authorities, in these circumstances, divide the gross value, with a consequent loss of rateable value, and in other cases divide the rateable value to obviate the loss—obviously the correct procedure is to disregard the existing assessment.

It may now be opportune to refer to the various bodies constituted under the Rating and Valuation Act, 1925, with the express object of promoting and obtaining "uniformity."

The Central Valuation Committee.

This body was set up in 1926 under the powers of the 1925 Act with the express object "of promoting uniformity" and removing inequalities in the system of valuation." There are 32 members elected by the Minister of Health and the various associations of local authorities, and with

the aid of technical advice six Series of Representations, which include sixty-seven resolutions, have been issued, together with a special pamphlet on "The Valuation of "Playing Fields," all of which recommendations have been made for the guidance of Rating Authorities, County Valuation Committees, and Assessment Committees. That the Central Valuation Committee has made recommendations with which some disagree will not be denied ; that the disagreement is justified is not denied ; but those who have seen the working of the 1925 Act from the local point of view will readily agree the Committee has made a generous contribution to the uniformity in the system of valuation which does exist.

Several of the recommendations have previously been mentioned in this room as being in some cases dangerous and in other instances illegal. At the risk of being corrected I would like to join those who have sought to make respectful criticism of the recommendations.

It was never contemplated that the Central Committee should attempt to provide any mathematical help in valuation, and, generally speaking, this has been studiously avoided. On the few occasions, however, when figures have been given, I fear it has militated against uniformity in valuation.

In Resolution No. 10 (ii. and iii.) it is suggested that 5 per cent. and 10 per cent. should be added to leasehold rentals to cover the cost of internal or internal and external repairs, when liability rests upon the tenant, to arrive at gross value. These percentages were in use before the War, and may then have been approximately correct. But in 1929, at the London Assessment Conference, attention was drawn to this recommendation, and a resolution was passed to the effect that the percentages were inaccurate. It is unreasonable to add, say, 10 per cent. to a leasehold rental of £50 when the allowance for the same purpose, together with a small amount for renewal, is £10 (Schedule 2 (Part 1)). As the rental increases, the disparity becomes more marked. The same criticisms, already well known,

apply to this rule of thumb as apply to the deductions from gross value to rateable value under the Schedule. I find, in fact, particularly with regard to mansions, that some valuers always work on rateable value, because the terms of letting are invariably on a rateable value basis, and the expenses of repair and insurance exceed both the suggested 10 per cent. allowance and the Schedule deduction.

Resolution No. 17, embodying the fractions applicable, with appropriate modifications, to the division of the total gross value of a farm, met with instant criticism, to which a reply was given by the Committee on pages 18 and 19 of the Second Series of Representations. I know that these recommendations have, in some cases, been followed so exactly that serious inequalities of valuation have been made. The Committee is aware of this, as evidenced by their observations in pages 11 and 12 of the Sixth Series of Representations.

Resolution No. 56, which applies to public, elementary, and secondary schools. In paragraph 3 of this resolution the final sentence reads: "where any playing fields attached to a school are of considerable extent they may, in the opinion of the Committee, be 'valued' separately." If it is understood "valued" means that in arriving at the total assessment the school playing fields should be considered separately, and not be included in the "per place basis," nor in the area of land included in the "con-tractor's basis," then I agree, but if it means separately assessed, then I respectfully disagree it would be better to apply the accepted rules relating to rateable occupation. I notice there is a general tendency to assess separately various parts of a complete occupation, which, in some cases, without justification, has been encouraged by the operation of the De-rating Acts, and I think a step could well be taken towards uniformity if the Central Valuation Committee would deal with the question of "rateable occupation" from this point of view in a subsequent series of resolutions.

A serious lack of uniformity still exists in regard to the

valuation of schools, and in some areas valuers work on the "place basis," either upon the capacity of the schools as certified by the Board of Education, or upon the actual numbers on the roll at a certain date ; whilst in other areas the "contractor's basis" is applied. When all the schools in an area are valued on one or other of these bases, uniformity of procedure may exist, though not necessarily of valuation ; but I do not think the three bases are interchangeable, and to that extent uniformity will be lacking between areas using the various methods indicated. The "roll basis" appears to be comparable with trying to value a public-house on the number of customers counted on any particular day. Surely, in both instances, the value is not so much concerned with the numbers as with the capacity of the premises for the particular purpose for which they are used. So far as private schools are concerned, a large factor in the success or failure of the school is the personality of the headmaster and his staff, and we are continually reminded to value the premises and not the occupier or his ability. In regard to provided schools, fluctuations are being made in the numbers at each school consequent upon the reorganisation of the teaching system, and therefore, on the first two bases under discussion, serious fluctuations will occur in the assessments of schools although the premises and the occupier may remain unchanged.

The saving grace of this method is that an education authority is only assessed on the total number of scholars under its supervision ; the Kingston *obiter dictum* applied to schools.

Resolution 58 (4a)—Tithe Rent-charge. The Central Valuation Committee suggested an allowance in normal cases of 5 per cent. in respect of the cost of and losses in collection and all other permissible deductions, other than rates, in calculating the assessment of tithe rent-charge. The apportionments of tithe vary considerably, so that it would be useful to know what are the normal cases to which the 5 per cent. should apply. I should think it would not

be unreasonable to ascertain the actual expenses of collection and the average losses.

Resolution No. 65—Garages within the curtilage of dwelling-houses.

I do not think the proposals in this resolution will serve to obtain uniformity, neither am I persuaded that they have been uniformly adopted.

Presuming the assessment of a row of dwelling-houses to be—

			£	£		£	£
			G.V.	R.V.		G.V.	R.V.
9	King Road	House ...	30	22		—	—
11	" "	House and Garage	36	27	Garage	6	5
13	" "	{ House ...	30	22 }	26	6	4
		{ Garage ...	6	4 }			

I doubt if any Assessment Committee would agree that a garage occupied with a house should be assessed at less than one occupied apart from a house, and therefore it would be possible for two persons to change garages and for each to save £1 rateable value.

Moreover, I cannot understand why, if a house be occupied, and not a garage, then the two should be assessed at one gross value, whereas if a garage be occupied and not the house, then separate assessments should be made. Surely the Central Valuation Committee must have had relative values in mind and not principles when passing this resolution.

County Valuation Committees.

These Committees are constituted under the compulsory powers of Section 18 (i.) of the 1925 Act, and comprise members of the County Council, together with members of the Assessment Committees within the county.

Their duties are to take such steps as they " think
 " fit for promoting uniformity in the principles and
 " practice of valuation, and assisting Rating Authori-
 " ties and Assessment Committees in the performance

“ of their functions to hold conferences with
“ persons representing Assessment Committees (includ-
“ ing Assessment Committees for county boroughs) and
“ to bring to the notice of Rating Authorities or Assess-
“ ment Committees any conclusions arrived at or
“ recommendations made by the Committee or at any
“ such conference.”

The County Rates Act of 1852 directed that the expenses of the county council should be precepted to each parish in the county, and appeal was possible by the overseers to the county council on the ground of over-assessment of the parish or the under-assessment of another parish. It was possible to prosecute this appeal to Quarter Sessions. This procedure is now, of course, abolished by the Rating and Valuation Act, 1925, and the guardianship of equality of assessment has passed from the overseers to the county council. Hence the urgent necessity for every County Valuation Committee to continue the protection of every ratepayer and every parish which for over 70 years was the responsibility of the elected overseers.

These duties are onerous, and it has been found necessary in many counties to appoint technical officers to assist the Committee in executing them. It has already been mentioned that the recommendations of the Central Valuation Committee have provided for uniformity of assessment. I think it will be agreed that the most conclusive evidence of this will be found in those counties where the County Valuation Committees have taken active steps to carry out their duties under the Act. If at the time when the 1925 Act was passed it was considered by the Government that these duties cast upon the county councils were of primary importance, it must be of even more importance that they should now be adequately carried out in view of the Local Government Act, 1929, whereby the precepting of county councils has been so much increased by their added responsibilities and the Exchequer grants in aid are weighted and distributed with some reference to rateable value.

County Valuation Committees are given powers to this end, to make objections and proposals and to prosecute appeals with regard to assessments which are considered to be unfair and unequal. But as apart from the exercise of these powers, some County Committees have rendered assistance to Rating Authorities in issuing recommendations for the assessment of certain classes of property, and in giving advice with regard to the assessment of particular hereditaments. Rating Authorities were advised by the Central Valuation Committee to refer certain classes of hereditaments to professional valuers; in some cases the reference was made by mutual consent to the county valuer, and in others to a group of valuers appointed by the Rating Authorities in consultation with the County Committee. By either method a measure of uniformity in and between rating areas has been obtained, which it is difficult to assume could otherwise have resulted.

Assessment Committees, which have in point of time and responsibility carried the burden of this new Act, are no less assisted in their duties by the County Valuation Committees in giving them advice with regard to particular points arising for their decision, and in providing information as to the action taken by other Assessment Committees in the county in cases which may be common to them. Upon reference to the Annual Report of the Central Valuation Committee for the year ended 31st March, 1930, it will be seen that many County Committees have busily pursued their duties with most encouraging results, which have been appreciated by the Central Valuation Committee.

One hears criticism as well against as for a County Valuation Committee, which is alive to its responsibilities, more often in the manner of the prosecution of their duties ; but I am definitely of opinion that in those counties where the Rating Authorities and Assessment Committees combine in a happy relationship with the County Valuation Committee, then much has been done, and will continue to be done, in the direction of uniformity of assessment.

Rating Authorities and Assessment Committees.

No specific directions are contained in the Act of 1925 for uniformity of assessment on the part of a Rating Authority, other than that those properties described in Part 1 of the Second Schedule to the Act are to be assessed in accordance with the definition of "gross value" prescribed in Section 68; whilst for the remainder the net annual value has to be determined in accordance with Section 22 (b). These two bases immediately tend towards a lack of uniformity of assessment, whilst in addition it is sometimes a matter of doubt as to whether a certain hereditament should have a gross value or not.

It will readily be agreed, I think, that many Rating Authorities were well acquainted with the necessity for uniformity of assessment, and have directed their efforts to that end. Some authorities, however, went a little too far, and attempted by taking a moderate view of the definitions referred to above, to obtain equality with the standard which, it was presumed, would be adopted by neighbouring authorities, with the result that the lists were returned by the Assessment Committee for amendment.

These latter bodies have an important place in the system for securing uniformity, especially when determining objections and proposals lodged on the ground of unfairness.

When it becomes necessary for a County Valuation Committee to lodge proposals in order to obtain uniformity of assessment, the Assessment Committee, in the first instance, has to decide between the merits of the contentions of the County Committee and the Rating Authority, and in some cases of the ratepayers of the particular properties of which the assessments are questioned.

Now, however much one may be steeped in this most laudable object of "uniformity," one learns more and more to understand that valuation is not an exact science, which

may properly be an excuse for some valuations with which one comes into contact from time to time. There must, however, be some lines within which it is incumbent upon every rating valuer to work, and in order to try to elucidate the approximate position of those lines, I propose to make some observations which, if they be found to be questionable, will, I trust, be excused on the ground that the excellent reports of evidence which appear almost weekly in the several well-known journals do not justify any of us younger men being dogmatic in our opinions.

DWELLING-HOUSES.

When a rating officer is faced with hundreds of dwelling-houses to assess, and an equal number of hundreds of "returns" to investigate, he has the choice of several methods of procedure. He may decide at once that he will put the responsibility upon his Rating Committee, in which case he prepares schedules of property, and will cause the Committee to go through the lists laboriously, with the result that, however detailed the schedules, the Committee is liable, not unnaturally, to adopt rule-of-thumb methods.

Again, the rating officer may pick out a number of houses in various parts of his area, usually in ascending order of value. Having all the necessary information, the Rating Committee will decide upon the gross value of the several properties, leaving the officer to assess all the other houses with the resolved gross values in mind. When using this method, one has occasionally heard of a town planning term, viz., "zoning," which I think warrants mentioning.

Some authorities, when faced with the task of a complete revaluation, decided to do the work thoroughly and employed sufficient staff to that end. Full particulars of each house were recorded in a "Domesday" fashion and the assessments were carefully calculated, with the result that much must have been accomplished towards uniformity.

In case these notes may come to the attention of Rating Authorities who have not so far seen fit, or have not had the

opportunity, to go so fully into the details of every property. I would suggest that such a careful preparation should be made for the revaluation in 1934. This will be not only an important aid towards uniformity of assessment, but will readily provide their officer, and the Assessment Committee, with the necessary information to enable them to deal correctly with any objections to the valuation list.

One is well aware of the considerable details which some ratepayers prepare in support of their objections (not always pertinent), but they are not always so conversant with those other properties with which they assert they are by comparison so unfairly assessed. It is indeed painful if only similar indefinite information can be advanced to the Assessment Committee in support of the assessment, when it is easy to prepare the facts in a uniform and accessible manner, which will enable the Assessment Committee to give a reasonable decision on the objection.

I have mentioned that details should be prepared of every house within the rating area, these necessarily include evidence of rent, terms of letting, improvements, &c., which are generally provided on the return. It should also include measurements, preferably " carpet areas " together with particulars of the number of rooms, distinguishing between sitting-rooms, bedrooms, kitchen, and outbuildings. If this data be kept in loose leaf or file form, it is also possible for a sketch of the premises to be made on the back of the paper or card. Many unreasonable criticisms have been made under a title such as " valuing by measurements," but in these days, when one has to deal with fluctuating rents, it is particularly necessary to have measurements so that the comparison of the premises may be made accurately. Some who were more conversant with the pre-war state of affairs, when rents were more stable, do not readily assent to the use of a 5-foot rod, but it should be remembered that in those days £1 rateable value meant approximately 2s. 6d. in rates, whilst to-day it may well mean 15s.

Those Rating Authorities who go fully into the particu-

lars of each dwelling-house on the lines indicated will do much to secure uniformity in their own areas, which will leave the County Committees to see that uniformity is obtained between the various rating areas within the county. This work of the County Committee necessitates a detailed examination of the rental evidence as compared with the actual assessments. In a recent appeal in which it was asserted that a certain house in one area was over-assessed simply on the comparison of areas of similar houses in another rating area 25 miles away, the evidence was refused, and properly so.

FARMHOUSES.

As before mentioned, there is in many areas a serious lack of uniformity in the assessment of farmhouses. But it seems this is a type of property which should readily lend itself to comparison, not only in rating areas, but in counties. I believe there are several County Valuation Committees which have found it necessary to revise the assessments of farmhouses throughout their areas. Where, however, this has not yet been done, I think it would be possible for the County Committees to value a certain number of such houses, particularly those near the boundaries of the rating areas, and to agree the assessments with the authorities so that a complete network of mutually accepted assessments should be made throughout the county. It would then be practicable for each Rating Authority to revise the assessments of the remaining farmhouses in their own areas.

The quality and the area of land with which a farmhouse is occupied are important elements in fixing the assessments, but I think due regard should also be had to the accommodation and size of the premises, together with the lay-out and proximity of the farm buildings. Even as a purely mechanical aid to the valuation of this class of property a 5-foot rod is not without value.

MANSION-HOUSES.

In many counties this is a class of property which has come under the heading of "Special Property," and has been left in the hands of professional valuers, and to that extent uniformity has no doubt been obtained.

Although the War and the post-War slump have caused a serious fall in the rental value of this type of property, the assessments even now are considerable. The gross value of a mansion-house is affected by a number of considerations, such as position, aspect, planning, heating, lighting, accommodation, extent of land and amenities, including the presence of hunts in the locality.

The experts who usually value such houses are able by inspection to put a price on each room ; and to the total "spotted" value a considered percentage adjustment is made for this or that advantage or inconvenience.

I may be excused for explaining that most valuers have so calculated their bases that baths, kitchens, sculleries, larders and lavatory accommodation are not actually priced, some allowance being made as a disadvantage when either there is an insufficient number of baths, or the domestic quarters are not modern or too small or inaccessible.

Any attempt to include such items as tennis courts, putting greens or other accessories outside the house in the "per room figure" is dangerous ; it is much preferable to make any necessary addition for these items as is done for gardens, garages, and outbuildings.

At the risk of being criticised, I am of opinion that even in the valuation of mansion-houses a 5-foot rod is useful to the rating surveyor.

It is a class of property which lends itself to uniformity of valuation, and much has been done in some counties as self-contained units, but much remains to be done as between one county and another towards securing uniformity. Those gentlemen who do not confine their attention to particular areas render very valuable service in applying their extensive knowledge of this class of property in every

part of the country to particular cases upon which their opinions are secured.

This latter dogmatic statement as to inter-county uniformity equally applies to golf-courses, brickworks, mineral-producing hereditaments, factories specially designed for specific purposes, and public institutions (hospitals).

SHOPS.

That there have been more objections and appeals in respect of shop property than almost any other type of property is perhaps explained by the number and variety of conditions, which, though difficult in some cases to appreciate, do have a marked affect upon the rental value of the premises.

In preparing a valuation of a number of shops, it is necessary to collate all evidence as to rental value, and by a process of analysis to arrive at the value of the shops proper, as apart from any storage or living accommodation. The shop (as well as the remainder of the premises) is then carefully measured, and the areas ascertained of various portions, in some cases to depths of 15 feet and 40 feet from the front, in others to depths of 20 feet and 45 feet from the front.

A price is then found which when applied to the area of the first 15 or 20 feet depth, and half that price to the second area to the accepted depth, plus a quarter of the original price to the remainder, gives in total the estimated rent of the shop proper.

The average of the prices thus found is regarded as the basic value of the shops in the street or row being valued, necessary allowances in applying this basic value to individual shops being made by the valuer, for points which he considers would reasonably affect the mind of the hypothetical tenant in fixing the rent which he would pay for the particular premises.

The results obtained provide guidance in determining

the rental value of shop property, but in trying to secure uniformity of valuation by this method it is very necessary to be careful that arithmetic does not displace valuation. It is important to look at the results of calculations.

In applying the above basis of valuation to a row of moderate shops, one may easily obtain a difference in a valuation of £8 to £10 gross rental for 1 foot of additional frontage, which it is doubtful if any shopkeeper would be prepared to pay.

Again, there is a practice of adopting a sliding scale allowance from the basis of from 10 per cent. to 40 per cent. for shops of double, treble, and so on, the normal frontage. It is questionable if this allowance does obtain in the usual bargaining between lessors and lessees, for it is difficult to imagine any lessor letting two shops of double the normal area (for conversion into a single shop) at a lower rent, especially when there is competition between multiple firms and large local tradesmen anxious to turn their shop premises into large showrooms.

When one has a fairly constant size of shop, there does not appear to be any necessity for making the various calculations referred to above. It seems that more satisfactory results will be obtained by valuing the largest area common to each shop, and making any necessary allowances for additional frontage or accommodation.

There are, of course, factors which materially affect the rental value of shop premises, such as the position relative to the centre of the town, the right and wrong side of the road, whether the road runs east or south, and the general lay-out of the road as a whole, particularly as to whether there are shops on both sides of the road.

There is also another important factor which continues to be more widely felt, that is the effect of motor transport facilities. Some shopping areas are being seriously depreciated by the movement of shoppers to the large centres of business.

One often hears mentioned that a particular shop is not suitable for the business being carried on in it, which,

although it may be of consequence to the particular tradesman, should not be taken into account in determining the rental value of the premises for rating purposes.

It is often said that, in looking at the rental evidence of a row of shops, it is necessary to take into account the high terms multiple firms have to accept in order to obtain occupation. This may be necessary in certain cases where a multiple firm is opening premises in a new area ; but when, as in most large towns, such firms obtain positions in the heart of the shopping area, then I think it is proper to accept all such evidence upon which to estimate the rent at which the premises might reasonably be expected to let.

In a case which was recently heard by the Dorset Appeals Committee it was contended that certain shop premises were assessed at more than their true value by comparison with the bases of assessment which appeared to have been adopted in other areas within the county.

To support this contention two bases for comparison were mentioned, the first being that already mentioned, of de-valuing the assessments to find the values which it appeared had been used in the various areas, and thus to establish that the particular area concerned had been over-assessed in comparison with the other selected areas.

The second comparison was to draw circles of 7-mile radius round the various towns cited, and to calculate the populations which would be likely to shop in the centre of those circles, and thus proving that in other areas the amount of business likely to be done was greater than in the particular area. I presume, in making these calculations, some fractions of spending ability were applied to the male portions of the population, but with much larger denominators than those fractions quoted as an aid to valuing shop property. Whether the towns were selected or picked out at random I do not know, but I fail to see any justification for altering any assessments upon the result of applying either of these bases.

With the exception of those classes of property already

mentioned, I do not think any evidence of the assessments of hereditaments in one town is of any use when dealing with similar hereditaments in another town.

What I do think provides good evidence is the relation between the rentals and the gross value in the various towns, which is a very different matter.

BANKING PREMISES.

The few appeals which have been heard with regard to the assessment of banking premises seem to prove that the banking companies and their advisers acknowledge that this class of property does undoubtedly command a higher rental value than shops.

Banking premises are a special type of building, which would not meet the requirement of any other business, so that from the banker's point of view security of tenure is necessary, whilst no landlord would use a valuable site for a building, costing approximately twice as much per cubic foot as a shop, when the number of possible tenants is so limited. Hence there are very few rents of banks obtainable ; such evidence as there is consists of the site value and the cost of the building.

The law of supply and demand is a factor in the value of property, but the important item, both as regards banks and shops, is the site ; and having struggled in the market for the site, on equal terms with other trading concerns, the deciding factor in the rental value must be the structural value of the bricks and mortar : just as the deciding factor in the value of shops is often as between bricks and mortar as compared with steel columns and girders and a large quantity of glass.

The Recorder of Northampton said, in giving his decision upon the assessment of banking premises which had been compared with shops : " If a bank is to be " regarded in the category of a shop, one thing is clear, " the shop most like a bank is another bank, rather than " a greengrocer's, draper's, or tobacconist's shop."

As one reads accounts of rating appeals taken before recorders, it seems a very sad state of affairs that learned counsel and their expert witnesses should appear in support of their varied contentions, and the decision, when it is purely a question of value, is often given by a gentleman who admits he has had to base his decision, against which there is no appeal, upon the value of the advocacy rather than of the premises.

There are some valuers, and indeed many ratepayers, who prefer to quote and compare rateable values rather than gross values, the reason being, so far as the valuers are concerned, that such arbitrary deductions as are set out in the Second Schedule to the Act cause a lack of uniformity in the rateable value although the gross value may be correct. Having regard to Section 22 of the Act, I think the process is incorrect, and leads to a lack of uniformity of assessment although the reasons advanced in support of it are logically sound.

I trust I shall not have been guilty of writing a textbook on the subject of uniformity ; but in having given definite opinions for the purpose of this Paper, I hope it will provide the framework of a discussion useful to those of us who live for uniformity, and which will enable us the better to promote that uniformity in the principles and practice of valuation of property for rating purposes in our own particular spheres.

Transactions *of* The Chartered Surveyors' Institution

SESSION 1930-1931.

AT THE ORDINARY GENERAL MEETING

*Held at the Chartered Surveyors' Institution on Monday,
13th April, 1931.*

Mr. E. H. LEEDER (President) in the Chair.

NEW MEMBERS.

The following new Members were presented by the
PRESIDENT for formal admission to membership under Bye-
law 21, and signed the Register:—

Associate :

EVE, ARTHUR MALCOLM TRUSTRAM.

Professional Associates :

BRISTOW, FRANK LEONARD	HIGGINS, KENNETH GORDON
DINGLE, GEOFFREY GEORGE	PEISER, ERIC GEORGE
SHAW, REGINALD ENFIELD	

A DISCUSSION took place on Mr. JAMES R. TOOVEY'S
Paper entitled

**UNIFORMITY IN THE VALUATION OF
PROPERTY FOR RATING PURPOSES.**

Mr. C. GERALD EVE (Vice-President), in proposing a vote of thanks to the reader of the Paper, said how excellent the Paper was, by which he meant no formal or empty compliment. Mr. Toovey's conclusions were sound and his research profound ; he heartily congratulated him on his Paper, with 99 per cent. of which he cordially agreed.

Turning to details, Mr. Toovey had referred to the valuation of schools, and had said that by adopting a unit value per scholar according to the average number on the roll a rateable value was arrived at. Personally, however, he (the speaker) did not think they could better the judgments of the Recorders of Oxford and of Cambridge given in 1902 on the " substituted building " basis. One assumed a building less ornate than the existing one by shearing off memorial ornament and excess spaces, and applied the contractor's theory to that. He did not think there was a better solution. Those who had valued a large number of public schools would find the *per capita* method a useful check of the contractor's theory on the substituted building basis ; to the less experienced the former method might be a positive danger.

Mr. Toovey had quoted the case of *Double v. Southampton*, and said it was decided to revalue a proportion only of the licensed premises in a parish. What Mr. Toovey meant, as he would readily admit, was that part of the revaluation of the licensed premises of the parish had been brought in in advance of the others. There, of course, the Court held that that was wrong. Southampton Parish did, in fact, cause all the licensed premises to be valued, but, because all the valuation was not finished, they brought in

one ward in advance of the rest of the parish, and that was held to be wrong.

Mr. Toovey had said, on the case of *Stirk v. Halifax*, "It was unusual before the War to lodge an objection to the assessment of a property because of unfair treatment as compared with other properties." Mr. Toovey was right, but it should be added that whenever a valuer had to revalue a factory to which large additions and alterations had been made, the valuer had to be at pains to preserve the old "tone" of the union, which very likely had not been revalued for 25 years. To that extent comparison was observed, *i.e.*, by not starting on new post-war values.

As regards the author's remarks on *Pointer v. Norwich*, the objection to using that case to-day was that the assessment committee, which was also the valuation authority in those days, had made the valuation, and could, therefore, be made responsible as having valued the property with which Pointer compared. To-day an assessment committee could not be fixed with responsibility for a valuation made by the rating authority.

As regards uniformity, although the revaluation under the 1925 Act was an advance towards the attainment of that end, he did not think anyone expected the "millennium in the quinquennium," as Mr. R. B. Cross of the Ministry of Health had so happily put it. No doubt 1934 would see an improvement, and in 1939, perhaps, they might expect to arrive at the millennium. When one remembered, however, that some unions had not been revalued for 33, 34, and in some cases even 38 years, they could congratulate themselves in having reached a measure of uniformity even though it was far from complete.

On uniformity generally, and the remedy of the ratepayer, there were two schools of thought. He approved wholeheartedly with Mr. Toovey's views. Summarised, it was this, that if one set out to rate a whole district one was aiming at a true line, a level line, a perfect uniformity, all on the basis of the reasonably expected rent of each property valued. If, in forming their opinion of the reason-

ably expected rent of each property in the whole district they were valuing, they were superhuman and not subject to error, they should arrive at perfect uniformity. But as it was human to err, excrescences arose on either side of that true line, over-assessments being made in some places and under-assessments in other places. Then the ratepayer said " Although I inwardly think I am on the true line, I observe " excrescences below the true line, and I think I am entitled " to have a shot at having my assessment dragged down to " the level of the under-assessments excrescences."

Then, however, the point of law arose, and here the case of the *Trustees of the Archdiocese of Cardiff v. Pontypridd*, which Mr. Toovey quoted, was of supreme importance. Mr. Toovey had quoted part of what the Lord Chief Justice had said in that case. But he had gone on to say that there the appellant's ground of complaint really was that his assessment was unfair because he was not included in the unfairness. To his mind that was the most subtle and truthful thing ever said by a judge in regard to rating. His own opinion was that it was the duty of a Court if a case came before them on appeal to see that their answer put every property before them on the true line of the reasonably expected rent; that if a property be over-assessed, it be brought down to the reasonably expected rent, but not to the unreasonably expected rent below the true line. If a ratepayer who was over-assessed above the true line objected to the excrescences below the true line, then ever since 1836 he had had his remedy, namely, to go to the assessment committee, and then to the Court, and say " My neighbour is " below the true line; put him up to the true line." That was the legal remedy. It had never been proper in law ever for a ratepayer who thought he was above the true line to say "Put me down below the true line to these unfair assessments," or " Please include me in the unfairness."

There had been several recent Quarter Sessions cases on that point, and one was now on the way to the High Court. All rating surveyors were anxious for a decision on the point: whether, if the appellant admitted that his assess-

ment was fair, he had no case, but had the right to bring under-assessments before the Courts and seek to have them raised. That task was rendered less odious by the existence of the County Valuation Committees which could themselves undertake it as their duty. Therefore the position to-day as regards properties which were under-assessed was certainly better than it was before the Rating Act of 1925 came into force.

To sum up, therefore, there were two schools of thought. Some said " Let us find a whole lot of assessments which " appear to be below the line ; let us try to persuade the " Court to reduce our assessment to that." The other school said " No, there is the true line ; there are errors of judgment " above and below the true line." He would ask the Court to say " As each property is brought before us, over which " property alone we, the Court, have jurisdiction, it is our " duty to see that that assessment is brought down or up to " the true line, and not otherwise."

He would like again to propose a vote of thanks to Mr. Toovey for a very sound Paper.

Mr. J. A. F. WATSON (Professional Associate Member of Council) said it gave him great pleasure, indeed, to second the vote of thanks to Mr. Toovey.

When one looked at all the help they had been given, it surprised one that there could be any lack of uniformity. In the case of shops, flats and houses in ordinary circumstances, there was really no excuse for the want of it, and if there was it was probably due largely to laziness. But there were types of property, for example, public utility undertakings, in regard to which one did still experience great difficulties ; types of property as to which there were no facts to guide them. There were, however, other hereditaments such as institutions, hospitals and schools, where it was very difficult to conceive what a hypothetical tenant would pay when one could not visualise a hypothetical tenant. In one area one would find a hospital assessed at £4 a bed, in another £14 a bed, and as one went from place to place one discovered

different methods of assessment in force. In one area hospitals were rated on a compassionate basis, in another area it was felt they should make a fair contribution to the rates, and the speaker could not conceive a hypothetical tenant rating a hospital as a commercial proposition, and he did not believe that any rating surveyor, whose work it was to assess a hospital, could honestly say that he valued it ; he did not.

He had recently been engaged in an appeal in a county where they had adopted the following method of valuing their hospitals: They had employed a professional firm to make a commercial valuation of all the hospitals in the area. The professional firm had done so on the contractor's method. The County Valuation Committee had decided to be more compassionate in assessing hospitals supported primarily by public subscriptions and had adopted a scale something like this: If 75 per cent. of the revenue of the hospital was contributed by paying patients, they took 25 per cent. off the commercial valuation ; if 50 per cent., they took off 50 per cent. ; if 25 per cent., they took off 75 per cent., and so on. As a valuation the results were fatuous. In the case in point there were 50 old women in the hospital supported by their friends, who paid various small sums in respect of beds occupied by them. Consequently the County Valuation Committee, in accordance with their scale, said that that hospital would get the minimum reduction from the commercial valuation because it was primarily supported by " paying patients." The hospital had replied that it would create a subscription list and inscribe thereon the names of all the people who were paying so much a month for the old ladies in the hospital, entering as subscriptions the amounts they paid and giving to each person subscribing the right to nominate one person for a bed. The hospital then became entitled to the maximum relief in accordance with the scale. When that sort of thing happened in a county it indicated that there was really no attempt at valuation at all.

It seemed to him that if in the interests of uniformity more legislation was wanted, such legislation should take

into account the fact that certain classes of property could not be valued, and should lay down a certain basis, arithmetical or otherwise.

To his mind, also, uniformity was prevented by the very nature of the Assessment Committee and the Court of Quarter Sessions. During the last quinquennial valuation he had been acting for a fairly large property-holding company which owned considerable estates of weekly property throughout London. They had made a very large number of objections to the new assessments, all on small houses, which had been confirmed in the first instance by the assessment committee. He had advised an appeal to Quarter Sessions, at the same time expressing the opinion that most of the cases would be settled out of Court. His clients had got what they wanted, and, largely by quite small reductions, had secured reductions in gross value amounting to £1,500. About half of those reductions had been secured on the re-deposit of the lists. Probably in only about 10 per cent. of those cases would the occupier in the ordinary case have been able to afford to go to Quarter Sessions after having his assessment confirmed. So long as justice could only be obtained in this way there was surely "something rotten in the State of Denmark."

He had no complaint to make with regard to the London Quarter Sessions, but if in the provinces they had a tribunal which had some technical knowledge of value, and of which the members (besides the Chairman) knew something of the value of evidence, they might get something better at Quarter Sessions than the "half-way-house" judgments which were so frequent. If for the administration of the Acts for compulsory acquisition of property a tribunal having some technical knowledge of value was necessary, why not for rating also?

In the second part of his Paper Mr. Toovey dealt with the practical difficulties the valuer had to face in putting into practice the principles laid down by those authorities. There were one or two things he (the speaker) desired to say on that matter. First of all, there was the difficulty of valuing

in areas where residential property was in process of becoming commercialised. He had had a case recently where a firm of builders' merchants had taken such a place on lease, paying rather a high rent for it. Upon their asking him whether the assessment would probably be put up, he had said he did not know ; he had advised them not to change anything but to leave the building as it was, and they had followed his advice. The rating authority had then increased the assessment. Next door lived an old gentleman whose assessment was left at £50 gross, while his clients' assessment had been increased to £100 gross. It had been his contention at that time, and was still, that in valuing property of that type one had to look at the area and value it as a whole. If a whole street became commercialised, the hypothetical tenant, as a man, could be visualised who wanted property there for a commercial purpose, in which case the old gentleman living next door would suffer. On the other hand, if the whole street still retained merely a residential value, the commercial occupiers would benefit until its character changed. If the houses in the street were identical, it seemed to him that they must have the same value to the hypothetical tenant, whatever that value might be.

Then there was the case of houses let in parts but assessed as one hereditament. He was told that at London Sessions the other day a gentleman in Lewisham had objected to the assessment of his house because it was higher than that next door ; he had said that however many people were in his house or in the house next door, the houses were exactly the same, and he had won his case. If two houses were identical, whether the hypothetical tenant wanted to live in the house as a whole, or let it as a whole, or let it in part, he (the speaker) could not see why the two houses, if treated as single hereditaments, should be differently assessed.

On the question of uniformity generally, surely there was one law for the rich and another for the poor. Some time before, an eminent surveyor, not a rating surveyor, had said

to him that they talked about square-foot areas and their hypothetical rents, but that those things had little relation to real values. In support of his contention, that surveyor had instanced the fact that he lived in a house which, with many others similar, could be let perfectly easy on lease at £200 a year, but was assessed at about £120 ; that round the corner there were rows of small villas, each of which would command a maximum rent of £50, which were assessed at £45 each.

The company of which he had previously spoken owned, besides weekly property, some first-class residential property and a certain number of good-class shops. In the assessments of the latter there was noticeable a very distinct margin between the gross values and what he called the equivalent rents, *i.e.*, the rents passing reduced to a gross value basis by the deduction of the cost of all services, &c. Generally speaking, the margin was much smaller between the gross values and the equivalent rents in the case of weekly property. In one borough that company owned solely weekly property of which the total rents amounted to approximately £14,400, while the gross value was £12,950, a 10 per cent. margin between rents and gross value. In another borough the figures were: Rents £12,020, as against gross value £11,240, a margin of 6·5 per cent. In contrast to this in those boroughs where the company owned high-class residential property, there were margins of 39·1 in one case, 19·2 per cent. in another, and 22·4 per cent. in a third. While there was uniformity between assessments of the same type of property, true uniformity would not be achieved until there was a uniform approximation between gross value and true rental value in property of both types.

He again had much pleasure in seconding the vote of thanks.

Mr. E. E. LAMBERT (Fellow), having thanked Mr. Toovey for his Paper on behalf of the Rating Diploma Section, agreed with him that uniformity had always been present in the minds of the Legislature, but doubted

whether they had achieved it. The Valuation (Metropolis) Act of 1869 was intended as an experiment to see whether uniformity could be obtained in London. London had now had 13 quinquennial valuations under that Act ; but who would be so bold as to say that complete uniformity had been reached in the metropolis? He thought Mr. Cross of the Ministry of Health and Mr. Gerald Eve were optimistic if they thought complete uniformity could be achieved in the provinces within three or four, or even five, revaluations.

In 1925 Parliament had applied some of the provisions of the 1869 Act to the provinces, and had amended and extended others in so doing, all with the object of securing greater uniformity ; and he thought that they had largely succeeded. The number of rating authorities had been reduced. The Central and the County Valuation Committees had been set up. Some of those Committees, as Mr. Toovey said, had achieved the objects for which they were established. Those County Valuation Committees which had taken their work seriously had achieved a measure of uniformity which would otherwise have been impossible, and he agreed with Mr. Toovey when he said that there was to-day a far greater measure of uniformity than had been possible under the old system.

Dealing with the Railways (Valuation for Rating) Act, Mr. Toovey had suggested that some rating surveyors might feel doubtful about the success of a measure under which the largest hereditament in the country was to be valued at the figure, to quote the familiar axiom, " at which the same " might reasonably be expected to let." But there was an obligation upon the Railway Assessment Authority, having ascertained the average net receipts, to ascertain, by reference to those receipts, the rent at which the railway company's undertaking might reasonably be expected to let from year to year if the tenant paid the rates and tithe-rent charge and did the repairs. By setting up the Railway Assessment Authority, the whole of the railway undertakings in the kingdom would be valued

by a single authority, and greater uniformity attained than was possible when local rating authorities were each responsible for valuing their own particular portion of the railway. If one added together all the assessments arrived at under the old system, he thought one would get a figure considerably in excess of what a true "*cumulo*" valuation of the railways would produce. Here, then, was a further step towards uniformity, which he hoped would soon, he was confident, be followed by a system, whether statutory or voluntary, of valuing centrally all other public utility undertakings. It was rather interesting to note in this connection that the Central Electricity Board was now endeavouring to get some uniform basis for the whole of their undertakings, present and future.

Mr. Toovey had criticised Resolution No. 10 of the Central Valuation Committee by which they prescribed a percentage addition to rents reserved under leases for the purpose of arriving at gross value. He thought that in London that resolution had been more honoured in the breach than the observance, and that those percentages had been proved as totally inadequate. If the Central Valuation Committee had to re-tabulate that resolution, he thought those percentages would disappear.

The only other point to which he desired to refer was that of the use of the 5-foot rod. In the great majority of cases measurements were an essential part of the data required to arrive at a correct valuation so long as it was remembered they were not the beginning and the end. They were simply an aid to arriving at a fair assessment, and must be considered in connection with all other data available.

Mr. E. WITTON BOOTH, M.B.E. (Fellow), said that in his opinion the degree of uniformity that had been attained during the recent revaluations was marvellous, everything considered, although he did not think that even in 1939 they would have reached that wonderful perfection contemplated in the Act of 1925.

Mr. Toovey had dealt fully with the importance attached to uniformity in earlier statutes. Arising from those statutes a system of valuation had evolved, and methods, indeed, extending over nearly a century of practice and procedure developed over a long period, at any rate back to the Parochial Assessments Act of 1836, and during that period the foundations of uniformity were well and truly laid. Methods of valuation in recent use had been built on that foundation, for admittedly the Act of 1925 introduced nothing substantially new in the method of valuation ; it still required the ascertainment of the hypothetical statutory rental as hitherto. That being so, the great mass of case law remained applicable, as also did the methods of arriving at the value of the statutory tenancy. Those methods in all but comparatively few instances still fell within one or other of three well-known and universally practised methods, viz., (1) the comparative, (2) the contractor's basis, and (3) the profits basis. The great difficulty now in establishing an equitable basis of uniformity was as between a valuation made, say, under (1) and another under (2) or (3).

It was well known that the majority of dwelling-houses nowadays were on controlled rentals which under the Rent Restriction Act must not exceed 40 per cent. of the standard or pre-war rent. Of course it was held in the case of *Poplar v. Roberts* that that increase did not fix values for rating purposes, but no one could question that it affected those values.

Actually those controlled rents did "fix" values, as Lord Justice Bankes in the Court of Appeal in the course of his judgment in the *Poplar* case prophesied they would. Clearly, then, hypothetical rentals of restricted property to-day are on the basis of not more than 40 per cent. over pre-war value. The comparative method is the one applied in practice to all such properties.

Turning to profits basis of valuation, by the London Brighton and South Coast Railway case, 1851, they were required to use the latest available accounts to ascertain

the rateable value, as compared with the 40 per cent. increase on pre-war values which applied to rent restricted property valued by the comparative method. There, he ventured to submit, was a want of uniformity extending to two very considerable masses of valuations.

In regard to shops he was going to ask Mr. Toovey to work out a calculation on the basis of each "zone" being half the value of the one immediately preceding. Let him take the case of the central shop with an area of great depth, wherein the front zone of 15 feet depth is, say, at £50 a square, and take, for example, a very deep shop extending, say, 120 feet front to back. The distance from the street front to 15 feet back would be valued at £50 a square, from 15 feet to 40 feet back at £25 a square, from 40 feet to 65 feet back at £12 10s., and so on. Going back at that rate, what would be the value of the back of that shop? When did one reach a value of zero? Was it possible to prove all the value as a minus quantity? It seemed to him that that indicated a defect in the system, because in that way one got to a very small rent indeed. Surely the equitable method of arriving at the value of a shop of that kind was to ask what was the hypothetical rental per square of the area at the extreme rear of the shop bearing all the circumstances in mind. He was thinking of shops such as were occupied by firms like Woolworths, British Home Industries, and such like. Such places were really more than shops; they were emporia or markets, and the area, say, 120 feet back from a main street in such shops was almost as valuable, for shopping purposes, as that, say, 40 feet or 50 feet back. What, therefore, was the value of that space at the rear, and what rates did it bear to the value of the area in the front part of the shop? Should not the graduation in value, if one drew it graphically, be represented by a straight line from front to back, and not by a mere stepping down by violent steps at every 20 feet or 25 feet?

He wished to express his thanks to Mr. Toovey for a Paper which was really an asset to the *Transactions*.

Mr. A. MALCOLM TRUSTRAM EVE (Associate) said that this was the first opportunity on which he had been allowed to speak, as he was proud to say, as a surveyor. He felt he was entitled to say something as a surveyor, and with the greatest possible respect to Mr. Gerald Eve, he could not see how the present annual letting valuation of a school could be arrived at by taking, first of all, a building which was not the existing building at all, because it was a substituted building without all the decorations and arrangements of the building; then taking on that other building the pre-war capital value, which he ventured to suggest had very little reference to to-day; and applying to that pre-war capital value 3 per cent., which had no reference to the present-day money values; and saying that that arrived at present post-war rental value. With great respect to those who invented that system in pre-war days, he ventured to suggest that there was a great deal to be said for the present modern tendency of taking a figure per bed, shot at as it may be.

As regards the bodies and persons empowered to secure uniformity, the County Valuation Committee, as they knew, had been set up primarily and almost entirely for that purpose. There was a problem which was arising in practice very frequently at the moment—that was the limits to which their powers extended. Mr. Booth had mentioned and Mr. Toovey had spoken of their powers and not of their limitations. It was of extreme importance to know whether the County Valuation Committee, during quinquennial periods, could by a series of proposals under Section 37 make what was in effect a revaluation of any district. That point was an extremely difficult one to determine. And even more important—it would be of great assistance if Mr. Toovey could answer the point—was whether a County Valuation Committee, not having the desire, or the money, or perhaps the time, to make a general revaluation of all properties, was or was not entitled to come into a district, announce its intention of valuing three or four of each class, make proposals, put them forward, and leave it to the rating

authority to do the rest. He ventured to think the answer to that question required very careful consideration.

With regard to the Assessment Committee, everyone, he thought, knew that at the time of making the valuation list it was the Assessment Committee that made the list, because the rating authority only made it in the first instance, putting it before the Assessment Committee, who had full power to alter it as and how they liked, and were responsible for finally making it. But the position of the Assessment Committee was not so easy in between quinquennials, and again he ventured to say the Act of Parliament was not clear. Under Section 37 any person, including the County Valuation Committee and local authority, were entitled to make proposals. Curious as it might seem, a local authority was defined, and included an Assessment Committee. Could an Assessment Committee, when it had a proposal made before it by a ratepayer upon the ground that he was over-assessed in comparison with ten other assessments, turn round and say " You may have a good *primâ facie* case, but we will put that right by making a proposal ourselves." It seemed at first blush to be wrong, and it might be that the local authority, the Assessment Committee in this case, had no rights, because, of course, no one could make a proposal unless he was a person aggrieved, and it might be said that an Assessment Committee was not a person aggrieved. That again was a point of practical importance which he thought required elucidation.

Then he came to the Rating Authority. He was not going to give abstract cases ; he understood that each of those cases had actually happened in practice, and some of them frequently. The Rating Authority could make proposals, but only if it was aggrieved. The problem then arose as to whether a Rating Authority was aggrieved or not when it desired to put assessments down. It might be the case that they had made their list too high, that they were paying too big a share of the county rate, and desired to put down the assessments. That had happened in many cases. Could they do it? Were they aggrieved? What did the word

“aggrieved” mean? He did not know, but it was a problem which the Act had left for solution by somebody, and that problem had not, in fact, been brought up before any competent tribunal.

Then what were the powers of the ratepayer with regard to uniformity, if any? Mr. Gerald Eve had taken the view, contrary to that of Mr. Toovey, that the ratepayer could only decrease his assessment down to the level which he called the true level, namely, upon the true definition of gross value or net annual value, as the case might be. Mr. Toovey and Mr. Gerald Eve represented two schools of thought. One would have thought that some 68 years after the words “incorrect and unfair” were used in a statute—the words might have been used earlier, but anyhow they had been used since 1862—there would have been some definite decision which would have assisted both legal practitioners and surveyors upon that point. But, subject to the one neat *dictum* of the Lord Chief Justice, quoted by Mr. Gerald Eve, no such authority appeared at the moment.

The view on the one hand was that every hereditament should be assessed upon the true terms of the definition of gross or net, and there were many arguments in favour of that position. The other school said that the terms of the Act of Parliament themselves provided for two definite grounds upon which a proposal or an appeal might be lodged, incorrectness and unfairness. If, so that school said, it all meant one thing, why use two words to say it? Again, there was a great deal to say for that point of view. In the presence of a Chairman of Quarter Sessions, who might have to decide it, to come down on one side or the other would be, at any rate, unwise.

Both schools, if he might say so with great respect, as schools usually did, proceeded to extremes. The one said “I have only got to find one assessment which is obviously wrong. I am going to say I am not going on the ground of incorrectness; I am going on the ground of unfairness, and, because I find that particular hereditament down there, I am entitled to be fair with it. Otherwise

“ I am going on the ground of incorrectness.” The other school said that another part of the Act required every hereditament to be assessed either upon the definition of “ gross value ” or upon that of “ net value,” depending upon the particular hereditament. It was difficult to make the two sections read together in some cases, and he desired to end by doubting whether the word “ uniformity ” meant anything more than universal correctness.

Mr. H. STEWART LOGSDON (Vice-President, Rating Surveyors' Association) said all were agreed that it was difficult to achieve uniformity even in one limited area such as a county. In his opinion it was most difficult in respect of the 80 or 90 per cent. of properties, *e.g.*, houses and shops with which Mr. Watson thought it was most simple to deal. It was a fact that the multitude of assessments, *e.g.*, houses and shops, when left to individual rating authorities, provided the greatest scope for lack of uniformity, and it was here that the 5-foot rod which Mr. Toovey advocated was of the greatest assistance as a necessary means of convincing both assessment committees and appellants of fair treatment.

The problem, however, went a great deal further than uniformity within a county. In practice difficulty was experienced in reconciling the standard of value adopted in different counties and county boroughs. As a county valuer he might be regarded as prejudiced in favour of County Valuation Committees, but he could assure them that when one came to grips with the problem of uniformity, and found in an adjoining county or county borough where there was nobody continually watching valuations, there was the greatest difficulty in reconciling the standards adopted. Where county valuers were employed, or the County Valuation Committees themselves were taking an active part in conferring with adjoining authorities, uniformity was well on the way. The Central Valuation Committee had recently advocated conferences between counties and county boroughs with that object in view. That was a matter which to his mind was of material importance to ratepayers generally. Now that by

the Local Government Act, 1929, the county rate was the largest proportion of the rate, and the fact that a great deal of the money which came to the various authorities was from Exchequer grants, it was essential that distribution should be on a uniform basis. One of the factors in the grant system was the amount by which the rateable value per head of population was less than £10 per head, and it was obvious that an unduly high or low standard of value materially affected the Exchequer grants. He urged that those in official positions should support the Central Valuation Committee in promoting, by agreement, as far as possible, uniformity as between adjoining authorities, and in that way assist in extending it to larger and larger areas.

He wished to thank Mr. Toovey very much for his Paper, and the President for giving him (the speaker) the opportunity of speaking.

The PRESIDENT said he wished to add his thanks to Mr. Toovey for his very excellent Paper, which was one that would provide food for reflection for a great many of them.

One point in the Paper that struck him was the wisdom of the policy county councils and county boroughs had recently adopted in employing full-time valuers, many of whom were members of The Institution, as one means of securing uniformity in assessments.

There was another point he wished to mention, viz., the anomalies that existed in the rating of clubs as compared with licensed premises. He hoped that when a re-valuation took place in 1934 some attempt would be made to effect a remedy. When one compared clubs with licensed houses, the latter had to pay heavy taxation and compensation fund levy, and, at any rate in South Wales, were more difficult to run.

The vote of thanks was then put by the PRESIDENT, and carried unanimously.

Mr. TOOVEY briefly replied, intimating that he would forward a written reply.

The following written communications have been received:—

From Mr. C. E. BERRY (Professional Associate)—

“ Uniformity ” is an oft-used and dangerous expression, because there is (a) no uniformity of understanding as to its meaning and application ; (b) no definition has been laid down in any statute or by the Courts ; (c) the dictionaries give no help. Secondly, because it leads one to believe that valuation is an exact science following uniform rules, and that valuation for rating is a creation of figures by the valuer instead of an actual record of values. It is even suggested in practice that a devaluation should be made in order to discover the figure secretly employed by the rating authority’s valuer.

In the writer’s opinion shop hereditaments in a highly developed neighbourhood are the most difficult to which to apply the comparative method. Take a butcher’s shop in a good shopping street, tiled and ready for use. It is known that drapers, grocers and other traders in the same terrace are paying high rents, and would pay a big figure for these premises on lease with the intention of making structural alterations. Obviously these traders cannot be considered as hypothetical tenants, as none of them will take the premises as they stand, tiled as a butcher’s shop, in the terms of the definition of “ gross value.” It would no more be correct to consider these possible lessees than to consider the speculative builder as hypothetical tenant for a residential estate when he knows that the lease will allow him to demolish the mansion and lay down sewers and roads, just the same as a lease of this shop will allow the lessee to put in a suitable front.

To price out strips of floor space in this case is a fallacy, and so it is where shops are variable in size, type and position, and suited almost exclusively to the trade for which they are structurally adapted. If the butcher’s shop has outlived its welcome and cannot be used for any other pur-

pose as it stands, then the gross value might well be little more than nothing, although standing in a very valuable position.

Mr. Toovey refers to the advantage of data as to number of rooms and floor space of dwelling-houses ; but surely this must be offset by the cost of obtaining it, especially when in some county boroughs a penny rate will raise only £300 or so, and thus the expense of valuation may defeat its object by adding to the burden of all the ratepayers.

Conferences and close relationship of Rating Authorities, Assessment Committees and County Valuation Committees are all to the good, but the difficulty of some or one of the authorities being placed in the position of judge and litigant at the same time arises.

From Mr. F. W. KUPHAL, B.SC. (Lond.) (Professional Associate)—

There are two classes of hereditaments mentioned by Mr. Toovey, in the treatment of which there is lack of uniformity, *i.e.*, advertising stations and sporting rights. Some authorities make separate assessments where separate values only should be given, and it is obvious that the distinction between the two should be swept away. I consider that every right of sporting, or advertising station, occupied separately from the land or property over which it is enjoyed should constitute a separate rateable hereditament, except where the occupation is of negligible value. The fact of severance or reservation should be sufficient without the necessity (often ignored) of enquiring whether the severance is by deed in the case of sporting. Legislation is required to put this right, and I agree with those who have expressed their regret that clauses dealing with these matters were not inserted in the one or other of the amending Acts which have been passed since 1925.

From Mr. F. C. ROSE (Professional Associate)—

Licensed Premises.—The writer's comments (page 182)

on three cases, including *Grant v. Knaresborough*, are apt and to the point. Many of us were, and still are, amazed at the evidence given by some well-known rating surveyors in the latter case. Page 191: "The roll basis appears to be comparable with trying to value a public-house day. Surely, in both instances (*i.e.*, schools and licensed houses), the value is not so much concerned with the numbers as with the capacity of the premises are used." I do not quite follow Mr. Toovey here. So far as public-houses, especially beerhouses, are concerned, a large factor in the valuation is the *site*, *e.g.*, a beerhouse may be very *small in floor space*, but be situate just outside the exit of, say, a steelworks or pottery, without any other licensed house near by; such a house may do a trade far larger than that of a palatial fully licensed house a mile away and in a better shopping street. The smaller house will do the bulk of its daily business within an hour of the works closing time in the evening, and its customers do not want spacious rooms. Here the dominant factor is site, not floor space, or the personality of the landlord.

Mansion-houses.—Page 199. Like Mr. Toovey, I have read and heard that experts are able by inspection to put a price on each room. I consider such a "method" impracticable, and contrary to common-sense. There is no science in the valuation of a mansion-house, and it is, more than ever, necessary here to be careful that arithmetic does not displace experience.

Page 190. The De-rating Acts are referred to by Mr. Toovey. I would like his views on the case of *The Revenue Officer for Leeds Assessment Area v. J. Lyons & Company, Limited* (King's Bench), and its possible results, assuming that there is no appeal. I do not see anything to prevent the occupiers stopping up the structural communications between the café and bakery, putting in a proposal now, *i.e.*, 1931, and getting separate assessments on café and bakery, and then, by means of a second proposal, obtaining de-rating for the bakery, because the café portion would

not form part of a single factory, and the bakery is capable of separate occupation.

If this property had been situate in London, the occupier would have no remedy or relief except on the making of a new Quinquennial List, *i.e.*, until April, 1936.

Again, if the premises had been in Belfast, the Northern Ireland Authorities would, provided the entire premises were held in one contract of tenancy, refuse to make separate valuations now or hereafter.

Can Mr. Toovey say what would happen if the premises were in Scotland?

Shops.—The author, in speaking of methods of valuation, says “ it is very necessary to be careful that arithmetic does not displace valuation.” Also, earlier in the Paper, that “ valuation is not an exact science.” This advice, though elementary, has, I am afraid, been disregarded by many rating surveyors during the last few years. It is not desirable that junior valuers should imagine that they can “ value ” a street of shop property by sitting in an armchair with carpet areas in front of them.

The “ 15, 20, 20-foot method ” needs very great care in its application, *e.g.*, to restaurants, corner shops, shops on island sites, and shops which run back to a second street, with a frontage to the latter as valuable as the other frontage. So, too, the large store, having large frontage and depth, excellent first floor and basement, has its own peculiar problems, which problems cannot be solved by the pure arithmetical methods. One might go on and mention “ lock-up ” and those shops with other accommodation over.

Written reply by the Author, Mr. JAMES R. TOOVEY—

I am indebted to Mr. Gerald Eve, to Mr. John Watson and to the other members for the remarks made upon the subject of “ uniformity.”

The unsatisfactory assessments which apparently obtain in the metropolis in spite of sixty-two years' work have

justified my mention of those County Valuation Committees which exercise the powers given to them under the Act of 1925.

I think the answer to many of the criticisms made by the speakers in regard to assessments, or to the methods of valuation, may be found explained in the second paragraph on page 187—a point not at present fully appreciated.

When a road is being commercialised, it is obvious the gross values of premises must be determined on the facts—there must be a point in time when the rental value of the premises, as private residences, will seriously decline, but as business premises will increase.

I agree that if two premises are similar, and are occupied similarly, then *primâ facie* the gross values of them should be similar, but I do not agree that occupation in whole is the same as occupation in parts, neither do I agree that the “hypothetical tenant” should determine the assessment “standing in the street.”

The answer to Mr. Booth’s arithmetic test is—From 90 feet to 115 feet back £3 2s. 6d., and from 115 feet to 120 feet back £1 11s. 3d. per square. The answer to the second part is “Never.”

Such a question as this may be used as an example of the difficulty in making dogmatic general statements on valuation, for is it not easy to visualise premises such as Mr. Booth describes, which in different surroundings would have totally different values apart from the value inherent in the site?

In referring to the Double and Hunter cases I made mention they were decided under the Union Assessment Acts, the unfairness having been created by bodies responsible for the making of the valuation list. A County Valuation Committee is not responsible for making the valuation list, and in the reading of Section 37 the Committee stands side by side with any person aggrieved. I think a County Valuation Committee is entitled to make a proposal in respect of any assessment which does not comply with the definition of “gross” or “net annual value.” I do

not think a County Committee should leave a rating authority to complete any task for which the Committee is responsible, for I cannot visualise any authority which would be willing so to act.

Any assessment committee making a proposal would have difficulty in fulfilling the rules given in the Fourth Schedule to the Act.

I cannot answer the questions raised by Mr. Rose in his written communication, so much depends on the positions of the café and bakery, but I do not agree that because certain premises are capable of separate occupation they are therefore separate hereditaments.

PAPER 534.

VALUATIONS OF THE ASSETS OF PUBLIC COMPANIES.

By Sydney A. Smith (Chartered Surveyor).

To be introduced and discussed at the Ordinary General Meeting of The Chartered Surveyors' Institution on Monday, 11th May, 1931.

Public Companies require the valuation of their assets for a variety of purposes.

They regularly require such a valuation at periodical intervals for the normal purposes of book-keeping, and the preparation of balance sheets, accounts, and returns for the purposes of income tax, and so forth.

They require it, apart from the normal conduct of their affairs, whenever a prospectus is to be issued either for a new flotation or for the purpose of raising fresh capital for an existing enterprise, or when there are proposals under consideration, or a scheme is being worked out for the amalgamation or interlocking of two or more concerns.

The Companies Act, 1929, Section 380, defines a prospectus as "any prospectus, notice, circular, advertisement, "or other invitation offering to the public for subscription "or purchase any shares or debentures of a company."

By Section 35 of the Act, and by Part 1, Section 5 (1) of the Fourth Schedule to the Act, it is prescribed that there shall be stated in every prospectus (a) "the purchase "price of any property purchased or to be purchased which "is to be defrayed in whole or in part out of the proceeds of the issue"; (b) "preliminary expenses"; (c) "borrowed moneys"; (d) "working capital"; and (e) "the amounts to be provided in respect of the matters "aforesaid otherwise than out of the proceeds of the issue,

“and the sources out of which those amounts are to be provided.”

Very similar requirements are applicable to a statement in lieu of prospectus which must, by virtue of the provisions of Section 40 of the Companies Act, 1929, be delivered to the Registrar of Companies, for registration, at least three days before the first allotment of shares or debentures by any company having a share capital which does not issue a prospectus on, or with reference to its formation, or, having issued such a prospectus, has not proceeded to allot any of the shares offered to the public for subscription.

The exact requirements in that case can be seen by reference to the statutory form of such a statement which is set out in the Fifth Schedule to the Act.

Those requirements are, as it will be observed, limited, but the common practice is to go beyond what is legally essential, and to include in prospectuses valuations of the building, plant, machinery, and other assets of the concern. Such valuations are indeed practically necessary in order to enable those to whom the prospectus is addressed to judge of the reasonableness of the purchase price and to consider such estimates of future profits as the document may contain.

Proper and reliable valuations of this kind, indicating, as they do, the relation of tangible assets to total cost and total capital, are in most cases so important a factor in enabling a prospectus to be properly read, that to omit them would be seriously to prejudice the prospects of a substantial response.

Similarly, where there is to be an amalgamation or interlocking of two or more companies, it is, as a matter of business, obviously essential for those responsible for these arrangements and equally for the shareholders and debenture-holders, who are to exchange their existing securities for those of the new concern, to have before them full and reliable valuations of the tangible assets involved, although, so far as I have been able to discover, here,

again, there is no legal provision requiring such a valuation to be prepared.

As to valuations of assets for the purposes of accounts and for the preparation of balance sheets, there are certain important legal requirements.

By Section 122 of the Companies Act, 1929, it is provided that "every company shall cause to be kept proper books of account with respect to (a) all sums of money received and expended by the company and the matters in respect of which the receipts and expenditure takes place ; (b) all sales and purchases of goods by the company ; (c) the assets and liabilities of the company." By Section 123 periodical accounts of income and expenditure and an annual balance sheet must be prepared, and by Section 124 (1) every balance sheet shall contain a summary of "its assets, together with such particulars as are necessary to disclose the general nature of the assets of the company, and to distinguish between the amounts respectively of the fixed assets and of the floating assets, and shall state how the values of the fixed assets have been arrived at."

And Sub-section (2) of the same section requires that, if it is shown as a separate item or is otherwise ascertainable from the books of the company or from any contract for the sale or purchase of property to be acquired by the company, or from documents in the possession of the company relating to the stamp duty payable on such contract or conveyance, the amount of the goodwill and of any patents or trade marks (as shown or ascertained) shall be stated under a separate heading in the balance sheet.

I understand that the most usual practice of accountants is to take the assets into the books at cost price or at a valuation, and then to provide for depreciation and in most cases for obsolescence by one or other of the methods with which I will deal hereafter. It would seem that it will be a sufficient compliance with the provisions of Section 123 of the Act of 1929 to state the nature of the fixed assets in general terms and to say that they have

been valued at cost less depreciation, or to use some other equivalent description of the method of valuation.

I cannot, however, help feeling some doubt as to whether that method of compliance with the section is really as helpful to those who are presented with the balance sheet as the framers of the Act perhaps intended.

It is obviously highly desirable that shareholders and others who are concerned with a balance sheet should have such information as to the character and value of the assets as will enable them intelligently to consider and criticise the accounts which are presented to them, and it is not very informative to read in a balance sheet an item of "land, buildings, plant, machinery and equipment, "furniture and fittings, at cost less amounts written off, "and less amounts realised or plant sold, £"

Balance sheets, presumably, are intended by the law to display the state of the company's affairs, but, in practice, this method is very often adopted to ensure that a balance sheet does nothing of the kind. In the case of successful and prudently managed concerns use is often made of this method to create hidden reserves of undistributed profit, and no great harm is perhaps done to anyone by such a process. But, just as under-statement can be made use of in this way, so over-statement can be resorted to in the case of weaker and less honest concerns, and it has often, too late, been found that the book values of assets had no relation at all to their true value.

If and when the law comes again to be amended, I cannot help feeling it to be most desirable that some practical means should be found of compelling assets to be shown in the balance sheet and in the accounts at as nearly their true value as may be, and of eliminating the book value which is either far below or well above the true value of the company's property.

The Standard of Value.

The law, so far as I can ascertain, has not attempted

to prescribe any basis or standard of the valuation. Possibly it was not deemed practical so to do, and it is assumed that the Legislature regarded it as undesirable to interfere with the freedom of companies to prepare their accounts on the lines they think best for their particular business.

Most valuers make it a practice, when reporting their valuations for company purposes, whether they are made for the purpose of flotation or account keeping, or for balance sheets, to state in express terms that the valuation is made on the basis of the properties being part of a going concern. By making this qualification the valuer defines the standard which he has adopted, and it may be useful to consider the meaning, general utility and correctness of valuation made on that basis, and the relation of that basis to other standards of value.

Meaning of "Value."

"Value" is not a word to which one definite and precise meaning can be given. When value is spoken of, it is necessary to consider the term in connection with the purpose of the valuation. In other words, different valuations may be made of the same property at the same time, and each may be proper and correct according to the particular purpose for and the particular principle upon which it is made.

This fact is given statutory recognition by the Acquisition of Land (Assessment of Compensation) Act, 1919.

That Act, in cases where power is given to any Government Department or to local or public authorities compulsorily to acquire land for public purposes, prescribes a basis of value usually known as "market value."

This is, in these special cases, substituted for what is commonly known as "value to the owner," a basis which still is appropriate when other promoters are empowered to acquire compulsorily. There are thus two standards here in operation side by side.

On first consideration it may seem that "value"

when one is valuing the assets of a company should be taken as market value, as defined in the Acquisition of Land Act, that is to say "the amount which the land, if "sold in the open market by a willing seller, might be "expected to realise."

That definition, however, leaves a good deal to the imagination, for it is not so much the willing seller as one or more willing buyers who really are the crucial element in arriving at a valuation.

Many of the problems of asset valuation occur in respect of industrial premises, and these may usefully be taken as examples. No great difficulty arises in those cases where the property to be valued is of a type or character which is suitable for a number of trades. Then the market value and the value to the owner may well be much the same. But the case is different when the property, although particularly suited to the actual concern using it, is not convenient for other uses. This value peculiar to the business may be due to various causes. The circumstances may be such that the premises would be of little value for any other trade. The situation, nearness to particular raw materials, cost of transport, labour conditions, facilities for obtaining cheap power, water supply, proximity to markets, local rates and housing conditions are all matters which normally may affect the question. Industrial premises in an unexpected place would invite inquiry as to the reason for the selection of the site. By reason of planning, a factory may be of little utility for other trades without substantial alteration. The peculiarities necessary for some special process of manufacture may dominate the design. In all such cases as these the introduction of the willing buyer into the definition of market value is of first importance. It assumes that there is some other person similarly placed to the actual occupier who would be a competitor for the premises if in the market, and this may not, in all cases, be a proper assumption. But, even if there be a willing buyer, or several, has the basis, while within the limits of market value, reached a standard which equals the "going con-

“cern value” which is commonly adopted by valuers for company purposes? I think not, and I think that the general professional opinion would be that “going concern value” would be higher, in the normal case of a prosperous undertaking, than “market value” however the latter was interpreted.

The basis of *value to the owner* is well known to the surveyors who deal with the compulsory acquisition of land for public and semi-public purposes. It is not the subject of any statutory definition, but it was recognised by the Courts in an early legal decision under the Lands Clauses (Consolidation) Act, 1845. The owner of land, required for public or semi-public purposes, claimed that he should be paid for his land the special value which it would possess to the promoters of the undertaking who required it for their statutory purposes. The Court held, however, that the purchase price that he should receive must be limited to the value which the property possessed to him. The basis followed is the value to the owner in his hands and for his purposes.

Market value is a lower price than *value to the owner*. The purpose of the 1919 Act was to prescribe a reduced measure of compensation, and experience has shown that this has operated in practice.

Value to the owner would, however, appear in normal cases to be equivalent to value as “*part of a going concern*.” It would include every element of value which the going concern could command, since the owner would be the person in possession of the entire undertaking. There may perhaps be exceptional cases in which the “value to the owner,” where the owner is a person who is capable of realising the market value apart from the business, is really greater than the value as part of a going concern. One example would be that of an undertaking which is not capable of earning profits commensurate with the market value of the premises. This, however, is only another way of saying that the assets may be of greater value to other persons than to the actual occupier.

In a rare case of this kind the value of the premises might be dominated by the realisable value in the market on a sale, independent of the "going concern." The premises might be capable of producing a price beyond their value to the going concern.

In addition to *market value*, *value to owner*, and *value as part of a going concern*, there are definitions of value in a rather different category, e.g., "*idle works*" value, *dismantlement value*, and *forced sale value*. The "*idle works value*" is the probable price which the premises should command to a purchaser who would carry on a similar business, or one capable of using the plant and machinery with the buildings. It would seem to be a rather lower basis than market value. For the valuation must take account of the risk of delay in selling to a buyer who would re-start the works, and also the risk of injury to machinery and its deterioration when out of use, and the expense of looking after it. Moreover, plant which is somewhat out of date may be tolerated by owners who have used it since new, but a newcomer will not be attracted by it. A stopped works, however, by reason of the fact that it is already equipped and can be re-started without either great outlay or great loss of time, will often command a purchaser. Success in finding a buyer in these circumstances cannot, however, usually be relied on, and the alternative of dismantling and selling the plant and the premises is one which must be faced and duly allowed for.

As to "*dismantlement*" and "*forced sale*" value, when dismantling occurs there is at once lost all the value of the special planning and design of the premises, and the value created by the transport of fixtures, plant and machinery to the property and their erection there. If plant is obsolete it will possess no more than a break-up value, or if it performs a special duty there may be no buyer for it. Only machines of general utility will, as a rule, command any reasonable price upon forced sale. And special plant, which usually will have cost the most, may be

expected to realise the least on a forced sale. If works fail where special machines have been installed for a special trade, it is usually at a period when other works in the same trade have little incentive to extend, and so there is no demand for the special plant. On the other hand, there are, of course, rare occasions when old machines will fetch more than new. Should there arise a sudden demand for a special class of goods, manufacturers will be willing to give more for an old machine capable of making the goods at once than for a new machine in the delivery of which there will be considerable delay. There were examples of this during and in the period immediately after the War, but in normal times it seldom will be met with.

Where machines, upon dismantlement, possess only a break-up or scrap value, this value naturally bears very little, if any, relation to the original cost. Workmanship and design are lost, and the only value is the value of the metal as scrap, and it is fixed by the price which the dealers will give.

The "*forced sale value*" will usually be the value of the land, buildings, and machinery, on the assumption that the business has failed. Consideration must be given to the chance of the assets being saleable, of sale for other purposes, or being such as can be used in other businesses.

Due allowance must further be made for the fact that the plant and machinery have in such cases usually to be wholly or in part dismantled and disposed of by auction or tender, and that the premises have to be disposed of by themselves in the open market. It will generally be necessary, in making such a valuation, to make it upon the footing that when the assets are offered for sale there may be little or no competition to secure them for the uses to which they have hitherto been put and for which they were specially adapted.

"*Forced sale value*" may be of assistance in solving the problems of fixing the proper rate of annual depreciation for buildings. For that value, subject to proper maintenance, may be regarded as approximately permanent.

Accountants commonly pay regard to scrap value in deciding upon the rate of depreciation properly applicable to plant and machinery, but I believe that it is far less common for this detail to be considered in the case of buildings.

"Going Concern Value."

Valuations of the assets of going companies are in practice almost invariably based on the value as part of a going concern. This is the value to a purchaser who would possess all the assets of every kind, enjoy all the advantages of the existing management and goodwill, and be able to derive all the advantages of the earning power of the undertaking. In other words, it is the value of the assets for the purpose for which they have been acquired and are held, on the assumption that the business, with all its facilities and potentialities, continues to be carried on.

The object of a prospectus or balance sheet is to indicate the nature and value of the business of the company and of its assets, and it would seem appropriate to that purpose that the valuation should be made upon the "going concern" basis.

When this basis is used, however, it must be recognised that a value is arrived at which must of necessity exceed the figure which can reasonably be expected to be realised if failure should overtake the enterprise. Unless it should happen that there is a prospective buyer who can make use of the premises and plant and is fairly eager to do so, nothing like the going concern value will be attained in such circumstances, and it must be recognised that the soundness of such a valuation is dependent upon the continued prosperity of the enterprise. Values on this basis are closely connected with the value of the goodwill of the concern, and if that goodwill be lost or diminished in value, these values also must be to a serious extent affected.

Utility of Valuations.

The observations in the last paragraph on the basis of a going concern lead one to enquire how far such valua-

tions are of practical utility. There are, of course, many properties of which the value will still be maintained should the premises be no longer used for the purposes of the business. But an investigation of the vast majority of the cases would disclose the fact that, upon the failure of the undertaking, the buildings would command only considerably reduced values for other purposes. Special purpose factories and premises, distilleries, docks, Turkish baths, theatres, concert halls, skating rinks, cold stores, and other properties with individual characteristics, might prove most difficult of realisation upon a forced sale. The opinion has been expressed that the use of the "going concern" basis may be misleading to the general public, particularly when it is used in connection with prospectuses and company accounts. While persons specially conversant with such matters may know the exact meaning of the basis, the public may, it is suggested, mistakenly regard a valuer's certificate as indicating the price likely to be realised upon a sale at any time or in any circumstances. It has been suggested that the usefulness of valuations to the public might perhaps be increased if the practice of valuers were to set out the price which might be expected to be realised upon a forced sale, as well as the value of the property as part of the going concern. The owners of the undertaking, and prospective shareholders, would then be able to judge of the security which the tangible assets would afford in an emergency, and would appreciate what portion of the values put before them should be regarded as attributable to and dependent upon the successful continuance of the enterprise and as subject to the trade risks. To the contrary it may be pointed out that the occasion of the valuation is that the public are being invited to participate in or are receiving the accounts of a commercial undertaking and may be taken to understand that the values put before them are subject to trade risks, and that the foundation of the proposition is that of a commercial enterprise for which success and continuance are naturally assumed.

It may further be urged that the assets are not held or offered for any other purpose other than that of utilisation in connection with the business. Normally they will only be used in the ordinary course of the industry, and there is no intention or expectation of putting up the tangible assets for sale.

It is contended, therefore, that the "going concern" value is the proper one, and serves the useful purpose of indicating the value according to the circumstances in and purposes for which the valuation is provided.

It is, perhaps, necessary to add that a valuation made for one purpose may be misleading if put to another use. A valuation for company purposes would, for example, be made on a basis which would not be a proper one if the valuation were being prepared for an intending mortgagee. It may well be that there may be a distinction between what is a proper valuation for the purposes of a prospectus inviting subscription for shares, and what is proper for use when mortgage debentures are on offer.

Procedure.

The making of a valuation on the basis that the properties are part of a going concern involves the assumption that the business carried on is sufficiently prosperous to carry the annual charges incidental to the provision of the land and buildings.

Does it then become necessary for a valuer, who adopts that basis, to satisfy himself that the profits of the undertaking are such as would justify the possession and use of properties of the capital value in question? Should he call for an accountant's certificate to that effect, or is his duty discharged if he qualifies his valuation by the words "as part of a going concern," or as a variation "part of a successful going concern," or "part of a concern capable of carrying on business upon the premises commensurate with the extent and the value of the assets?"

This must, I suggest, be a matter of individual judgment in each particular case. An experienced valuer will

rapidly discern a case where there is any serious question of this nature, and no valuer of repute will be found to accept, without the fullest investigation, any situation where the use of such a qualifying phrase as I have suggested would be liable to lead to a misapprehension of the true position or to enable a business to be disposed of to shareholders upon a basis of valuation which the true circumstances do not justify.

Practice.

It is the basis which is the important feature in valuations of this nature. The practice follows the usual lines. The valuation is the result of the valuer's opinion, and is the price which he anticipates that the subject-matter would realise according to the circumstances of the valuation. It is largely a matter of comparison based upon experience of values and prices paid for similar properties.

In dealing with company valuations, however, cases often occur in which no materials for direct comparison are available. Novel ventures in industry are often exploited by joint stock enterprise. In such cases the actual or estimated cost of the buildings and structures and the value of the site will naturally be accorded more importance than in most valuations. Actual costs, where buildings have been erected during periods of high costs or in situations which require excessive foundations, the cost of the demolition of old buildings and other special features, may need careful scrutiny.

In most cases the valuer will estimate a rental for land and buildings and find the capital value by the use of a multiplier or years' purchase. The rental may be based on an estimate of a price per unit of area or capacity according to the position and character, and the multiplier for capitalisation will vary according to the current market conditions influenced by factors of supply and demand.

All values depend to a large extent upon the current value of money. The effect of the depreciation of currency,

shortly after the War, was shown in that all commodities possessed, measured in terms of money, an inflated value. It is a question whether the reversion to the gold standard a few years back has, or has not, tended to stabilise values. If so, the recent industrial depression may have disturbed the equilibrium.

The presence, among the assets, of premises which are not directly productive and may involve actual expense, such as welfare buildings, canteens, rest rooms, playing fields, and housing estates, may add to the complications of the valuation.

Examples of other problems which may arise can readily be found. A factory may be designed for special purposes with a capacity 30 per cent. above present needs, in preparation for increased trade, which may be expected hereafter. Is the value to-day, as part of the going concern, limited to the current needs? The cost of premises may have been enhanced by the incorporation of features of architectural beauty, but do they serve any more useful purpose, and are they for that purpose of any higher value than a more utilitarian building? An undertaking with equipment worth a large sum to a successful firm is at the moment earning very small profits. This is attributed to temporary conditions. Is the value limited to the present circumstances, or may the valuation to some, and what extent, assume a more successful future? Other interesting problems experienced in practice will doubtless occur to members.

Plant and Machinery.

The plant and machinery present the same difficulties of principle as the premises, and the decision follows the same rules. The basis, therefore, is the value as part of the undertaking as a going concern. A very old engine may be doing its work in an existing factory and possess a value where it stands. It properly has a value as part of the undertaking although elsewhere it might perhaps be valueless. This simple example illustrates the principle.

It is perhaps not out of place to observe that great care must be exercised to see that portions of the plant are not valued twice. The electric-light installation, water services, sprinkler installations, lifts, ventilation, and heating services, are items which it is easy, inadvertently, to take into account both in the enhancement they give to the buildings and again in the plant schedule. Sometimes, too, stages and galleries carrying machines may be liable to inclusion with both plant and buildings, and the same risk also extends to some classes of plant in the nature of structures. An illustration of the uncertainty of classification of plant was displayed in the recent assessment appeal of *The Union Cold Storage Company v. Southwark* (London Quarter Sessions, March, 1931). The rating authority there derived their assessment of annual value from an estimate of capital value of the buildings in which the insulation of the cold stores was included. Upon an application by the appellant under the Rating and Valuation Act, 1925, Section 24 (2), for information as to the plant, &c., included in the assessment, no mention of the insulation was made. The rating authority regarded the insulation as part of the buildings and not as plant. At the hearing before Sessions it was ruled, on the contention of the appellant, that the insulation was plant. (Whether such plant falls within any of the classes to the machinery order is another problem.)

The capital value of plant and machinery is usually arrived at on a cost basis less depreciation (if any). If the plant be up to date in character, this can be done by ascertaining the price of the same item if purchased at the time of the valuation, and adding the cost of transport to the position and of fixing and putting in going order. Foundations of machines are taken with the machines. From the total so arrived at there must be deducted a suitable sum to cover depreciation due to wear and tear, and also the factor of obsolescence must be duly allowed for. In practice experienced valuers can readily assess a value on machines of common type according to age and condition

without this investigation. Much useful information can be obtained from price lists and catalogues coupled with a knowledge of the ruling discounts. It must be said, however, that the variation of prices since the War and especially the recent reductions in quotations, and the modern improvements in the process plant of most industries, often render cost prices of little assistance in arriving at present values.

Goodwill.

A very important item in the valuation of an undertaking is the goodwill. Beyond its tangible and material property a successful business acquires a very real and valuable, though intangible, asset which is commonly called "its goodwill."

"Goodwill" is not easy to define or even completely to describe, but, in general terms, it may be said to be that part of the value of business which arises from any special advantage that it has for carrying on its enterprise by reason of its connection, reputation, long establishment, favourable situation, name, trade marks, brands, copyrights, patents, monopoly rights, or other considerations of the same kind, which give rise to a reasonable expectation of future profits. For our purposes goodwill may perhaps best be regarded—to use the description of it given by Lord Justice Fletcher Moulton in *In re Spanish Prospecting Company, Limited* (1911), 1 Chancery, at page 105—as "the price at which a person renounces his rights to future profits."

Often the goodwill could be separated from the premises, but goodwill is rarely sold alone. The valuer's estimate may therefore often be based upon previous experience of the prices secured for premises and assets plus goodwill, or upon experience based upon the dissection of total prices.

The separate valuation of goodwill is usually made at so many years' purchase of net profits, although in some classes of business it is based upon the receipts. Net profits for this purpose must be arrived at after the special deduc-

tion of all annual charges including rental values in respect of the building and premises occupied by the concern, and of interest upon the value of the other assets and upon the working capital necessarily employed in carrying on the business. Where any question of monopoly attaches to the business—for example, when one is concerned with a company entitled to supply gas or water or electricity to a certain area—this monopoly is, of course, an important factor in the valuation.

Valuation of Undertaking as a whole.

The duty most commonly referred to surveyors for prospectus or book purposes is to supply valuations of certain classes of assets, usually the land, buildings, plant, and machinery, or fixed assets. Other assets such as stock, trade marks, patterns, loose tools, stores, &c., are more often valued by the company's officers, and it is comparatively rarely that a surveyor is instructed to make a valuation of goodwill alone.

If the valuation required is to cover the whole undertaking, the question arises as to whether one should proceed (*a*) to estimate the values of the items in detail and to make the total, that is the aggregate of the land, buildings, plant, machinery, and other assets, together with the goodwill, or (*b*) to value the assets as a whole and make a single estimate based upon the profits to cover the entire undertaking.

Where valuers are asked to give a valuation of the whole concern, their usual practice is to build up the valuation by computing separately, and then adding together the values of the land and buildings, plant and machinery, &c., and the goodwill. This course has the justification that the past experience of valuers has usually been gained of the items in detail, and can best be applied in that way.

This problem was discussed by Sir Gilbert Garnsey, K.B.E., F.C.A., in a Paper entitled "Some Notes on Goodwill," read before the London members of the Institute

of Chartered Accountants on 12th January, 1928. He put forward arguments and examples to show that the most satisfactory way of valuing a business is to take it as a whole. Among his remarks he pointed out—

That in normal cases a purchaser is largely guided by (a) the degree of commercial risk incurred in carrying on the business, and (b) the yield desired, the two being interdependent, and the vital factor being the yield required on the capital to be invested. Having ascertained the value of the tangible assets and formed his opinion of the risks, the purchaser can decide the minimum return he will require, and when the yield has been decided, the purchaser can settle the maximum price for the whole business, namely, the tangible assets and goodwill. When the purchase price has been settled, it is necessary (for book-keeping purposes and prospectuses and balance sheets) that the value so ascertained should be spread over the several classes of assets. From the tangible assets the liabilities are deducted, and the balance, if any, of the valuation of the business as a whole then represents the amount allocated to the goodwill.

The amount allocated to goodwill is only one element in the total capital, and it is upon the total alone, as compared with the maintainable profits, that is upon the yield on the total capital, that the value of the business can best be judged.

The above remarks indicate the case for the valuation of industrial undertakings as a whole in one calculation according to the profits. The Paper may be profitably studied. But whatever principle is followed, the result should be the same, and if a right result can be secured, the means by which it is reached are perhaps comparatively unimportant, and, indeed, more than one method may, in cases of difficulty, be resorted to, in order to check one result by another and so obtain confirmation of an opinion as to a figure.

Depreciation and Profits.

“ Depreciation ” is a term used to express the gradual deterioration of the wasting assets of an undertaking. It results from the physical wear and tear of the buildings, plant, and machinery, and also from obsolescence. It would include their disappearance in course of time, *e.g.*, patents, &c. The charge for depreciation forms a large and interesting part of modern production costs. It is an essential consideration in connection with profits.

The rules for computing profits were set out with great lucidity in the judgment of Lord Justice Fletcher Moulton, *In re Spanish Prospecting Company* (1911), 1 Chancery, as follows:—

“ ‘Profits’ implies a comparison between the state of a business at two specific dates, usually separated by an interval of a year. The fundamental meaning is the amount of gain made by the business during the year. This can only be ascertained by a comparison of the assets of the business at the two dates.

For practical purposes these assets in calculating profits must be valued and not merely enumerated. An enumeration might be of little value. Even if the assets were identical at the two periods, it would by no means follow that there had been neither gain nor loss, because the market value—the value in exchange—of these assets might have altered greatly in the meanwhile. A stock of fashionable goods is worth much more than the same stock when the fashion has changed. And to a less degree, but no less certainly, the same considerations must apply to buildings, plant, and other fixed assets used in the business, because one form of business risk against which business gains must protect the trader is the varying value of the fixed assets used in the business. A depreciation in value, whether from physical or commercial causes, which affects their value is, in truth, a business loss.

We start therefore with this fundamental definition of profits, namely, if the total assets of the business at the two dates be compared, the increase which they show at the later date as compared with the earlier date (due allowance of course being made for any capital introduced into or taken out of the business in the meanwhile) represents, in strictness, the profits of the business during the period.

But the periodical ascertainment of profits in a business is an operation of such practical importance as to be essential to the safe conduct of the business itself. To follow out the strict consequences of the legal conception in making out the accounts of the year would often be very difficult in practice. Hence the meaning of the word 'profits' is rarely observed in drawing up accounts of firms or companies. These are domestic documents designed for the practical guidance of those interested, and so long as the principle on which they are drawn up is clear, their value is diminished little, if at all, by certain departures from this strict definition which lessen greatly the difficulty of making them out.

Hence certain assumptions have become so customary in drawing up balance sheets and profit and loss accounts, that it may almost be said to require special circumstances to induce parties to depart from them. For instance, it is usual to exclude gains and losses arising from causes not directly connected with the business of the company, such, for instance, as a rise in the market value of land occupied by the company. The value assigned to trade buildings and plant is usually fixed according to an arbitrary rule by which they are originally taken at their actual cost, and are assumed to have depreciated by a certain percentage each year, though it cannot be pretended that any such calculation necessarily gives their true value either in use or exchange. These, however, are variations of practice by individuals. They rest on no settled principle. They merely arise from the sound business view that it is better to underrate than to overrate your profits, since it is impossible for you to foresee all the risks to which a business may in future be exposed. For instance, there are many sound business men who would feel bound to take account of the depreciation in value of business premises (or in the value of plant specially designed for the production of a particular article), although they would not take account of appreciation in the same arising from like causes.

To render the ascertainment of the profits of a business of practical use it is evident that the assets, of whatever nature they may be, must be represented by their money value. But as a rule these assets exist in the shape of things or rights and not in the shape of money. The debts owed to the company may be good, bad, or doubtful. The figure inserted to represent stock in trade must be arrived at by a valuation of the actual articles. Property, of whatever nature it be, acquired in the course of business has a value varying with the condition of the market. It will be seen, therefore,

that in almost every item of the account a question of value must come in."

Sums invested by an enterprise in wasting assets must properly be regarded as payments made in advance on revenue account, and provision has to be made out of the revenue derived from the use of these assets to recoup those payments. As provision for depreciation is a balancing figure against the actual loss of capital assets, it is a first charge upon the business to be met before any profit can be made.

If portions of the value of wasting assets are lost by use, obsolescence or disappearance and are not charged against revenue, there is a corresponding increase in the apparent profits, and to the extent that such merely apparent profits are distributed as dividend, the dividend is, in fact (although apparently not in law), paid out of capital. I say "in fact" because, although the payment of a dividend out of capital is illegal, since that would amount to an unauthorised reduction of the capital of the company, the Courts have declined to apply this rule to cases where there has been made no or no sufficient provision for depreciation. In *Less v. Neuchatel Asphalte Company* (1887), 41 Chancery Division, page 1, the Court of Appeal laid it down in terms that the payment of a dividend is not to be considered a return of capital merely on the ground that no provision has been made for keeping the assets up to the nominal amount of the issued capital of the company, and that there is nothing in the Companies Acts to prohibit a company, formed to work a wasting property, from distributing, as dividend, the excess of the proceeds of working over the expenses of working, nor to impose upon the company any obligation to set apart a sinking fund to meet the depreciation in value of its wasting assets, and that division of profits, without providing a sinking fund, is not such a payment of dividends out of capital as is forbidden by law.

Such is still the law, and no change has been made in it by the Act of 1929, although many eminent lawyers,

including the learned author of *Palmer's Company Law*, have strongly criticised these authorities, and it is indeed obvious that, by the neglect to make proper provision for the loss of capital assets, a company, apparently prosperous when judged upon its dividend record, may, in fact, be heading for inevitable disaster. The practical importance of proper allowances for depreciation is thus apparent.

Depreciation.

It is the function of the depreciation charge to make the financial provision under this head. Expenditure upon maintenance may tend to counteract the effects of use. Plant and machinery may be kept indefinitely capable of work if the parts are maintained and renewed from time to time. So long as satisfactory output continued without increase of cost, the original value to the undertaking might be maintained if obsolescence did not enter in the problem. Experience, however, seldom shows that it is desirable to continue the use of old machines if modern types will do the work more economically.

If the adjustments were made upon the periodical revaluations of assets at short intervals, the effects of depreciation by use, age and obsolescence could be effectually met, but this would not normally be a practical course to follow.

If adopted, the results would to some extent reflect the extent of the use of certain of the assets, showing larger reductions of value consequent upon use in times when work had been considerable.

The methods by which depreciation is to be reckoned, and the sums to be allowed, present problems of technical difficulty. The common practice in the majority of undertakings of ordinary character is annually to set aside certain sums calculated upon average percentage rates against the cost or value of the assets, usually in classes, according to the normal life, extent of use, and the risk of obsolescence. The rate or percentage may be calculated on the diminishing value as it is written down year by year, known

as "*the reducing balance*" method, and this is probably the most usual basis, although a method which is not sound in theory.

Another common method is to charge depreciation at a fixed rate throughout the period decided upon for the particular class of asset. This is sometimes called the "*straight line*" method.

Some undertakings treat depreciation on an *annuity* basis, and set aside during the term of the life of plant, &c., the annual sum required to provide interest on the cost or value, and to recoup the capital at the end of the period.

Provision for depreciation may also be calculated according to the *utility* of every division of the assets during each year of efficient life. Sometimes it is measured by amounts varying with output or with hours of work. This method results in a direct relation to use and enables the larger depreciation to be carried by the years in which output is greatest.

Each method has advantages. The decision as to the best for any particular undertaking depends largely upon the magnitude of the works, the class of plant employed, and the chance of obsolescence through improvements and new inventions.

Undertakings which are subject to severe fluctuations of trade are naturally unable to provide regular sums for depreciation. In such cases it is not uncommon for the rates of depreciation to be made variable in accordance with profits made or output produced, the soundness of which may be open to question.

If a concern is working at a loss it is not possible to make full actual provision for depreciation, but the charge should of course be continued, and appear in the accounts, whatever the effect upon the balance sheet may be.

There is a great difference in the period which will elapse before the asset is entirely written off, according to whether the depreciation is a fixed one, on the straight line basis, calculated on the initial value, or a percentage upon the reducing value. This is shown by the fact that a

depreciation of 5 per cent. on the straight line method would eliminate the item in 20 years, but the same rate charged on the diminishing value would extend the period before it was reduced to a negligible sum more than 70 years. To write down a capital outlay in ten years upon the diminishing value requires depreciation at the rate of 33 per cent. per annum.

Outlays upon renewals affect the question of depreciation. Sometimes these are specifically charged to the assets, and the depreciation calculated upon the increased values. More frequently small repairs are met from revenue, while larger repairs and renewals are borne by reserve funds provided from the profits for this purpose and to meet expected renewals. These provisions are additional to depreciation.

Depreciation of various Classes of Assets.

Land (except where held for development and sale) would not usually be regarded as a subject for depreciation. The usual experience of land values is an upward tendency.

It may happen that industrial premises are so situate that the value of the site appreciates rapidly. Such increase in value is, however, not often one which improves the property for the purposes of the business carried on. If the enhancement is attributed to user of the land for other purposes, it may have no effect upon the general value of the assets, and may not be capable of realisation except by demolition of the buildings.

Buildings.—These usually include factories, workshops, offices, stores, sheds, and premises generally, and also wharves, river walls, fences, and similar works. Even if of the strongest construction and properly maintained, deterioration of buildings is inevitable, and progress in design employed by modern competitors, or new factory or industrial legislation, may also introduce an element of obsolescence.

Buildings are sometimes divided into classes for depreciation purposes—(a) brick or stone buildings subject to ordinary wear and tear such as offices, stores, and portions used for light manufacturing—a very common rate of depreciation for such buildings would be $1\frac{1}{2}$ to $2\frac{1}{2}$ per cent. upon the reducing value ; (b) buildings subject to heavy work, rough use, or vibration from fast-running machinery (common rate about 4 per cent.) ; (c) temporary buildings of wood, corrugated iron, &c. (common rate, 5 to 10 per cent.).

The rates named are on the assumption that proper maintenance is carried out from time to time. They are rates in common use, but, in fact, are probably too low.

Plant and Machinery are items which offer great problems in relation to the amount of the depreciation allowance. The problems may more properly belong to the mechanical engineer, the financial expert, and the accountant, but they are not without interest to surveyors.

The highest value of plant is usually the cost of the machine plus transport and cost of fixing. The lowest is the residual or scrap value represented by the value of the materials less the cost of dismantling and transport.

The charge for depreciation is usually based upon the original value, less the scrap value, according to the probable working life and the circumstances in which the plant is to be used. Excessive use, as where machinery is in continuous operation night and day, often involves more than corresponding wear and tear. Some machines fail to realise the anticipated life, while others exceed it. It is probable that the estimate of the life of a machine can best be made after it has been running two or three years, and in addition to the physical life the risk of obsolescence has also to be considered.

Nearly every large concern, conducted on modern lines, keeps exact records of plant and machinery, which would show the initial cost, scrap value, and probable life, as well as repairs carried out to it, and such renewals of parts as

may have become necessary. Records of plant are usually kept by the works manager or someone on the engineering side, and the financial direction is usually responsible for the reckoning of depreciation, in co-operation, however, with the engineers.

In small concerns depreciation may be dealt with on general lines, but in undertakings of magnitude it may receive more detailed treatment. The assets may be subdivided into numerous classes, each separately depreciated. Occasionally individual machines of considerable importance may be treated alone. But this is a refinement of detail which is not often practicable or worth while. To the extent that the estimate of the life of any particular piece of plant is uncertain, better results are probably obtained by fixing an average rate for a number of items in a class.

A principle is needed which will provide for the recovery of the value of the plant by periodical allowances from earnings. The difficulty is that the terms of the depreciation fund have to be settled before the life is known.

The depreciation rates for power installations and for machinery and plant of ordinary type are somewhat standardised. If taken together, assuming the reducing balance method is employed, the rate for the entire factory equipment is usually about 10 per cent. per annum. If buildings, chimneys, sidings, &c., are included in the general depreciation, 5 per cent. or 6 per cent. is often used, but the more general practice, even in small works, is to classify the items. Steam pressures and hours of working will affect the life of boilers and engines. Taken together, the minimum depreciation is usually 10 per cent., and the maximum 15 per cent. If separated, steam engines would carry $7\frac{1}{2}$ per cent. to $12\frac{1}{2}$ per cent., and boilers 12 per cent. to 20 per cent. Gas engines and motors are frequently allowed the same life as steam engines. Portable steam engines are built light for ease of moving, and they usually work at high pressure ; $12\frac{1}{2}$ per cent. is a common figure. Shafting (excluding belts), 5 per cent. to $7\frac{1}{2}$ per cent. ; electric cables, 3 per cent. to 5 per cent.

There is also a tendency towards standardisation in the common classes of process plant, and the rate is about 10 per cent. on the reducing value.

Machinery and plant in a works which is of a special nature and peculiar to the manufacture undertaken would need particular consideration from the point of view of obsolescence, and much will depend upon the probable permanence of demand for the manufacture. Machines may also be of a class or character which involves rapid deterioration. Usually the average depreciation rate will then be in the neighbourhood of the normal 10 per cent. plus a special allowance for obsolescence, short life, &c., of 10 to 25 per cent.

Loose plant and tools are usually valued every year. They wear out too quickly for treatment on the lines enumerated for depreciation, or they may be maintained at a proper value by additions paid for by revenue.

Floating assets, raw materials, stock, &c., are usually valued in accounts at cost or market value, whichever is the lower.

Income Tax.

The allowance for depreciation of plant and machinery is an important detail in the assessment of profits for income tax purposes, but the sums which a company may have elected to charge are not necessarily those which will be sanctioned by the tax authorities. The position was explained by Lord Justice Fletcher Moulton, *Spanish Prosperity Company* (1911) (Chancery), in these words:—

“ though there is a wide field for variation in practice in these estimations of profit in the domestic documents of a firm or a company, this liberty ceases at once when the rights of a third party intervene. For instance, the Revenue has a right to a certain percentage of the profits of a company by way of income tax. The actual profit and loss accounts of the company do not in any way bind the Crown in arriving at the tax to be paid. A company may wisely write off liberally under the head of depreciation, but they will be only allowed to deduct the sum representing actual depreciation for the

purpose of calculating the profits for income tax. The same would be the case if a person had a right to receive a certain percentage of the profits made by the company. In the absence of special stipulations to the contrary, 'profits,' in cases where the rights of a third party come in, mean actual profits, and they must be calculated as closely as possible in accordance with the fundamental conception or definition to which I have referred " [quoted on page 247].

The allowances normally sanctioned by the Inland Revenue Department are printed annually in accountants' diaries, and also in the *Accountant*. The current Schedule is to be found in the Tax Supplement to the *Accountant* of the 28th June, 1930, and has been reproduced in the current issue of *The Institution Journal*. (See page 475.)

In addition to the allowances for wear and tear named in the Schedule, expenditure on repairs may be charged, and also the cost of renewal of parts of machinery and plant, provided the identity of the original items of plant or machinery is not changed. The renewal of the whole item cannot be charged when depreciation allowances are also allowed.

If machines are discarded from reasons of obsolescence and substituted machines purchased, a special deduction is allowed of the difference between the values as written down of the machine displaced and the price obtained for it.

Taxpayers also have in the alternative the right to receive allowances for depreciation and obsolescence on a basis of actual renewals.

It will be observed that the agreed depreciation allowances for income tax are, in some instances, less than the rates quoted earlier as being those commonly used in company accounts. The Tax Schedule appears inadequate for modern needs, particularly when it is remembered that it is computed on the written down values. Even the rates quoted earlier have not of late years proved sufficient for the purpose. They are survivals of pre-war days, or even of the Victorian era, when competition was less severe and obsolescence of plant not a factor of the importance which it now is.

Transactions *of* The Chartered Surveyors' Institution

SESSION 1930-1931.

AT THE ORDINARY GENERAL MEETING

*Held at the Chartered Surveyors' Institution on Monday,
11th May, 1931.*

Mr. E. H. LEEDER (President) in the Chair.

NEW MEMBERS.

The following new Members were presented by the
PRESIDENT for formal admission to membership under Bye-
law 21, and signed the Register:—

Fellow :

ROLLS, HAROLD ARTHUR

Professional Associates :

BROWN, FRANCIS ARNOLD
CROSER, WILFRID ROBINS
FRAZER, HARRY ALEXANDER

JEFFERIES, CYRIL GEORGE
OWEN, ALBERT DAVID
SIDE, CHARLES ERIC

A DISCUSSION took place on Mr. SYDNEY A. SMITH'S
Paper entitled

**VALUATIONS OF THE ASSETS OF PUBLIC
COMPANIES.**

Sir JOSEPH BURN, K.B.E. (Fellow), said he felt it an honour to propose a vote of thanks to Mr. Smith for his Paper. One reason why he felt so pleased at having been asked to do so was because he believed he was the only Fellow of the Institute of Actuaries who was also a Fellow of The Surveyors' Institution. He had been glad to hear Mr. Smith say that most of his Paper was elementary ; that, indeed, was why he himself had so enjoyed it. He remembered the years he had spent in attempting to make what he was determined should be honest and reliable valuations of property, and the difficulties he had met. Those difficulties had seemed almost insuperable, but he had come to the conclusion that even he had not found them all out because Mr. Smith had discovered more.

All the way through the Paper Mr. Smith had tried to define that difficult word " value," and had succeeded, he felt sure, in showing what an elusive thing value was. Only a few days ago he had been impressed by his experience in regard to two old firms of repute which he supposed a few years ago would have been valued as old going concerns. One of those firms was engaged in the production of wooden curtain-rings. He had found, somewhat to his surprise, that an enormous number of those rings were still being used. The manufacture of those articles involved special skill. They had suddenly found that large numbers of those rings were being dumped in this country at a price with which it was quite impossible to compete unless the men accepted a wage which their employer could not have hoped to persuade them to accept. Now those thirty men,

some of whom he knew, were all on the "dole." In another case, that of a chairmaker, the same thing had happened.

What he was trying to emphasise, and what he thought the Paper also emphasised, was the ease with which depreciation in value might take place, and how hard it was to restore appreciation ; how in many years a business might be got together which was of real value to the nation, and how easily that business might be destroyed by even temporary competition at impossible prices. The business having been so destroyed, not only had the nation to maintain the workman during unemployment, but if the trade were started again, an altogether different valuation, namely, the value of building up instead of destroying, would have to be made.

Approaching the Paper from the point of view of the investor rather than of the valuer, he agreed with the author's plea that the value placed on the assets should represent as far as possible the true value ; for example, in connection with an issue of shares the figure should represent the value of the assets to the company as a going concern, but for an issue of debentures or application for a mortgage, the probable price that would be realised, apart from its present user, should be disclosed. In such a case the value of the plant and machinery would often be considered negligible. A prospective mortgagee must of necessity consider the possibility of having to enforce his security, in which case the assets would probably be realised by a forced sale. So far as the balance sheet was concerned, the value to be placed on the fixed assets, as distinguished from the liquid assets, which would be re-valued each year, the question was not so simple, as the account had to serve such diverse purposes as, for example, registration at Somerset House, information of shareholders, satisfaction of the bank as regards the bank's overdraft, the support of an application for a loan or mortgage, and so on. The best that could be done in that case was, he thought, to fix a conservative figure, and state clearly how it was

arrived at, whether at cost less depreciation or by revaluation. The interested parties would then be free to accept the figure with such adjustments as they considered necessary from their own point of view. Probably the counsel of perfection would be to revalue the fixed assets, say, every five years, and to use that value or the existing book value, whichever was the less. If the book value was less than the valuation figure, the latter could be quoted in an explanatory note.

The policy of writing up the value of fixed assets in the balance sheet on a revaluation was usually to be deprecated. The value of the fixed assets as shown in the balance sheet must always be accepted with reserve by a prospective mortgagee or debenture-holder. It not seldom happened that in making a debenture issue a property-investment company fixed the amount of the debentures too high in relation to the ordinary capital. The reason for that was that the borrowing company considered that the loan capital might reasonably represent two-thirds or more of the "value to the owner" or the "market value" of the fixed assets, while the lender would probably not be willing to advance more than two-thirds of the "mortgage value."

The author had said that goodwill was an important item in the valuation of an undertaking. That was undoubtedly the case, especially in certain industries that were mainly dependent upon goodwill represented by patents, monopolies, and so forth; but, generally speaking, goodwill being a very intangible thing, its value should as far as possible be eliminated from the balance sheet. In point of fact, except in the special cases to which he had already referred, a large figure in the balance sheet of a company representing goodwill was usually looked upon by an investor as a confession of weakness.

He desired once more to say how pleased he was to propose the vote of thanks, and how certain he was that members would enjoy the Paper as he himself had done.

Mr. W. STANLEY EDGSON (Fellow) said he much appre-

ciated the privilege of seconding the vote of thanks now before the meeting. If they looked through the records of their Institution and of their sister Institute they found that almost yearly Mr. Sydney Smith, who was one of their most brilliant members, came forward with an able Paper, or text-book, from which they could glean much knowledge. He felt that to-day Mr. Smith had tackled a complex subject upon which many of them much desired information. He for one was grateful that he would now be able to show disgruntled clients, who expected high valuations, a Paper, recorded in the *Journal of The Chartered Surveyors' Institution*, which set forth the basis upon which recognised practitioners valued going concerns.

Mr. Smith had wisely refrained from defining "goodwill," but he had very clearly defined "going-concern value," and "going-concern value" was very much wrapped up with goodwill. If anybody was in doubt as to the basis upon which he should tackle the valuation of an asset, he should refer to Mr. Smith's definition of "going-concern value," which was an extremely difficult thing to define. Where the "value to the owner" merged into "going-concern value," the problem was even more difficult to appreciate. If a valuer, when making a valuation of a going concern, visualised his valuation as between a willing vendor and a willing purchaser in the same line of business, the purchaser taking over on Monday morning from a vendor who closed on Saturday evening, with all the benefit of goodwill, organisation and assets as they stood, then surely he had got a true perception of "going-concern value."

He (the speaker) found the greatest difficulty in accepting a view that a different value should be placed for a debenture than for a preference issue. Sir Joseph Burn felt that the valuation for a debenture should be lower. He himself felt that a debenture issued in the ordinary way in accordance with usual Stock Exchange practice was a debenture on the assets of a company as a going concern, and he was doubtful how far one should be influenced by

the knowledge that one was valuing for a preference issue, an exchange or amalgamation of shares, or a debenture issue. If subsequent speakers could help on that difficult point he would be grateful. He felt, however, that whether one was a debenture-holder or a preference shareholder, one wanted to know the true value of the company's assets as a going concern. He was naturally not suggesting that the value for mortgage could be treated in the same way as the value of a going concern.

He suggested that there was a tendency to value bricks and mortar assets, whether freehold or leasehold, twice over when valuing as a going concern, because for purposes of their valuation they assumed a hypothetical rental value that another company desiring to take over the whole properties would pay ; and they then capitalised the difference between that hypothetical rental value and the rental paid, if any. But having done so, did they realise that they had probably wiped out a substantial portion of the profits? Therefore, whenever he was in a position to do so, the valuer ought clearly to indicate to those for whom he was making the valuation the hypothetical rental values adopted in arriving at his valuation of the assets. He thought it was desirable also that the profit-earning capacity of the company they were valuing should be closely analysed. Mr. Smith had some excellent remarks on that point. How often they found that a sound old-fashioned concern was really trading on its profit rental, and if it were capitalised at the true capital value of its assets it would be found to be making little profit or return on the money involved. For debenture purposes he thought it was desirable to intimate the annual charge placed upon the concern in order to arrive at the capital value of the assets, so that the debenture issue might be shown as not only twice covered by capital assets, but two and a half, three or four times, as the case might be, covered by earning capacity.

He felt they should make a habit of dissecting balance sheets ; the outcome of the present depression would be that the Stock Exchange and shareholders would appre-

ciate the great difference between the concern which was backed with good tangible assets systematically valued and those of doubtful standing with little behind them.

With regard to Mr. Smith's hope that further legislation would require periodical valuations, showing the true state of a company from time to time, he hoped it would be justified by events.

There was a further type of value which had really been in their minds for many years, but which had only recently been brought out prominently by the Landlord and Tenant Act, 1927. He referred to "goodwill value that attaches to the property." They had not heard of or discussed that intangible expression prior to this amusing Act, but had they not in valuing stock companies as going concerns for many years past valued goodwill that attached to the premises? He was certain that was a species of value which had caused them all a deal of difficulty. To make himself clear he would instance a multiple company occupying a corner shop at a rent of, say, £1,000 a year, though probably no ordinary trader would pay more than £850 for it. It might be a prominent corner site on which the company had expended from £3,000 to £5,000 on structural alterations and a new shop front, and on inspection one formed the opinion that the company had a fine goodwill and were making good profits. One was asked to value that as part of a going concern. How could one assume a hypothetical rental value in excess of £1,000 when one had the firm conviction that £850 was the normal rental value? Yet surely, as a link in a chain of stores occupying a prominent corner and doing good business, the leasehold interest in that property had some going-concern value? Therefore they had to consider a value which they had only just recently begun to talk of as "goodwill value attaching to the premises." He was not going to suggest to them how, or on what basis, one should value such "goodwill value"; it must largely be done by comparison, instinct, or experience. But undoubtedly many valuers had been worried as to what value they could place on a property

which they knew to be fully rack-rented, but at the same time obviously had substantial asset value as part of a going concern.

With regard to depreciation, he suggested that industry to-day was in such a depressed state because during the last two or three decades their organisations, even their successful and prosperous companies, had not adequately depreciated their assets. Those who were interested should study American methods of depreciation. Those methods of depreciation, particularly in valuations, were far more ruthless than our own. In valuing a building the American always reckoned to wipe out the fabric in a comparatively short space of time—even if the property were, as was usual in the States, freehold—and that part of the fabric which was subject to more rapid depreciation than the mere shell was wiped off very rapidly indeed. The American wiped off his fabric in perhaps 40 to 50 years, his lifts and other building equipment in a period of 10 to 20 years, and his machinery and plant in even less. Why had that not been possible in their own trading concerns? Perhaps it was because they were not so prosperous; but he ventured to suggest that had their trading concerns adopted depreciation more severely than they had done in the past, they would have been in a sounder position than many, even of the old-established companies, found themselves in to-day. Therefore he suggested to every valuer that, where it was in his power, he should indicate to his client the amount of depreciation that he should apply to his assets year by year.

He felt deeply indebted to Mr. Smith, and it was with great pleasure that he seconded the vote of thanks.

Mr. PERCIVAL F. TUCKETT (Member of Council) thought that in ordinary circumstances, in the case of a new company at any rate, a valuer must assume that the company's business was or would be a success. Unless he had been specially instructed to value the property in question or the company's assets on account of his expert knowledge of

the particular business, it was not a valuer's duty to give an opinion on the trading prospects of the company. Consequently his valuation should be on the basis of "a going concern." On that basis values varied according to the property to be valued. In the case of houses, shops, hotels, or even warehouses, the difference between a going concern and market value need not necessarily be very great ; but with factories and similar special types of property the margin between "market" and "going concern" value varied tremendously. In those cases he thought that a valuation on cost, rather than on rental value, was to be preferred. It was the valuer's duty to see that the capital had been wisely expended, and to base his valuation accordingly ; but in the case of many new companies expenditure had been grossly inflated, land had been bought at a price far above its market value, and buildings had been put up regardless of cost. The duty of the valuer was to state what in his opinion was the fair value of the land and buildings, *i.e.*, what the fair cost ought to have been. Unfortunately in the case of most public companies the promoter required an inflated valuation. Probably that was why Chartered Surveyors so seldom valued for public companies. The companies which could afford to face a fair valuation were comparatively few in number. If every valuation of property for a public company had to be made by a Chartered Surveyor in the same way as the accounts had to be certified by Chartered Accountants, he believed the public would have a better run for their money. He was afraid, however, that that was an ideal which they were not likely to achieve at the present time.

With regard to balance sheets he did not quite see how companies could give the detailed information suggested as requisite by Mr. Smith. Valuations were expensive, and companies could not be expected to incur that expense except in special circumstances. The majority of investors did not know how to read a balance sheet, and even if further information were given to them, he did not think it would help them much. Everyone who knew how to read a balance

sheet could usually tell whether all was well with the company. By perusing the directors' reports and balance sheets of previous years, and, if necessary, the original prospectus, he thought one could form a very fair opinion as to whether the assets were inflated or not. The reading of a balance sheet required a certain amount of technical knowledge, and investors who had not that knowledge should obtain advice before paying out their money.

He considered that every well-managed business should have secret reserves. As a matter of fact, in the majority of cases they were not really secret reserves ; if an investor took the trouble to look at the past history of the company he would find that those so-called secret reserves consisted of amounts put to reserve year after year, and were mentioned in past balance sheets and directors' reports. They were only secret in the sense that the shareholders had forgotten all about them. In these days it was not desirable to parade reserves.

With regard to depreciation he thought that they were all agreed that the way in which the Inland Revenue Authorities treated all companies was most unfair. Insufficient allowance was made for plant and machinery, and nothing was allowed for ordinary wasting assets, which in many cases comprised the bulk of the company's assets, as, for instance, expensive leasehold premises. Those leasehold interests might be worth £200,000 or £300,000, which all disappeared at the end of the lease. Yet no allowance for sinking fund could be deducted from gross profits to cover that dwindling security.

One speaker appeared to mix up debentures and mortgages. Debentures were usually secured by a floating charge on the whole of the assets of the company including goodwill, and therefore besides the capital value of the assets the net profits of the company had to be taken into account. A debenture must therefore, to some extent, take the risk of the company proving a commercial success just as preference and ordinary shareholders do, but a mortgage was secured solely on specific assets, usually land and buildings

only, and in that case the valuation should be on the basis of market value at a forced sale.

He had much pleasure in again thanking Mr. Smith for his very instructive Paper.

Mr. J. G. ELSWORTHY (Fellow) reminded those present that at the outset of his remarks, in introducing the Paper that evening, Mr. Smith had stated that 534 Papers had been read before The Institution and not one on that subject. He (the speaker) was not surprised at that, and they were all the more grateful to Mr. Smith for tackling so complex a subject.

It was necessary to approach that form of valuation, not merely as a valuer, but also as a first-class business man. The whole of the discussion so far had centred round the question of standard of value, and he submitted that Mr. Smith had hit the right nail on the head when he said that in those valuations for prospectuses the value to the owner and the value as a going concern were synonymous terms. In issuing a prospectus a company was merely asking the public to become owners of the concern ; therefore the value to the owner and the value as a going concern were the same.

Then there was the question of differentiating between valuation for ordinary shares and for mortgage debentures. He did not quite agree with Mr. Sydney Smith there. One must keep in mind the value of the business as a whole ; if one was going to value for mortgage debentures on merely scrap value, then he submitted that very few companies would be able to raise any mortgage debentures at all. Shipping companies were a case in point, some were going through difficult times, others were flourishing and were raising money on debentures, valuing their assets as going concerns. If their ships were to be written down to scrap value, it would be impossible for them to raise debentures at all. Therefore he still felt that the value as a going concern must apply throughout.

Then with regard to the effect of amalgamations, one

might be asked to value a first-class factory in the Midlands, and shortly afterwards that factory might amalgamate with another concern. It might be to the advantage of the amalgamated concern as a whole then to shift their production to the works of one concern, with the result that the other works, which might previously to the amalgamation have been valued at £60,000, became merely of scrap value, say, £20,000, if one could get it. That was not depreciation of assets ; it was merely the effect of rationalisation and amalgamation which was going on throughout the country.

Then there was the question of changing money values. As they all knew, in post-war years they had had to value in a depreciated currency ; the value of a concern in 1931 might be very different from its value in 1923, not because of any real change in its value, but because of the change in the value of money.

He thanked Mr. Sydney Smith for incorporating in his Paper that wonderfully lucid judgment of Lord Justice Fletcher Moulton. He thought all members of The Institution, and especially the younger ones, should read that judgment carefully ; he had never discovered a better description of profits and value and the terms commonly used among surveyors and valuers.

Mr. Sydney Smith deserved thanks for having nailed to the counter the all too common fallacy that cost was value. One had heard boards of directors argue that because a thing had cost so much, therefore it must be worth that amount. They all knew that argument was absurd.

In conclusion he desired to say that the Paper filled him with some alarm, because he was afraid that Mr. Smith would be offered so many directorships that he would be lost to The Institution.

Mr. W. E. A. BULL (Professional Associate) reminded those present that a valuer, as Mr. Elsworthy had said, should approach valuations of that kind as a business man ;

but he himself did not think the businesslike way in which a certain valuer, not a member of The Institution, had approached the matter was quite correct. That valuer, upon being asked what his fee would be for valuing an asset of a certain concern for flotation purposes, had replied that he would value at £30,000 for a fee of 100 guineas, at £40,000 for 150 guineas, and at £50,000 for 200 guineas. That was certainly a businesslike attitude, but a wrong one. He felt that the public had suffered a great deal in the past from inflated valuations made for prospectus purposes. Therefore he thought that their greatest thanks were due to Mr. Smith for his able definition of the varying shades of value.

He himself questioned the utility to an intending investor of many valuations on the basis of a going concern. He thought many valuers, and perhaps not excluding members of The Institution, had allowed that going-concern value to enter into their minds to such an extent that they had produced valuations which were too high. Perhaps the reason had been that they had, often inadvertently, valued the goodwill of the concern twice. Mr. Smith had pointed out the treacherous ease with which a portion of the plant could be valued twice over, and it seemed to him even more fatally easy to value the goodwill of a going concern twice by placing a high rental value upon the premises owned by the concern. In that way one might reduce the amount of the profits by a figure which would have been multiplied by, say, three, increasing the rental value by the same amount which would then, perhaps, be multiplied by twelve. That was a very real and grave danger. No valuer could possibly express an opinion upon the going-concern value of the buildings without being fully informed as to the past or estimated profits of the concern. If the valuer was placing a going-concern value on that asset, *i.e.*, a special value representing the worth of that asset to the company carrying on its business, he must impliedly be expressing the opinion that the concern would continue to be successful. Therefore it seemed to him that the best valuation for the purposes

of a flotation, or for arriving at the true value of the assets of a company, was to be made on Sir Gilbert Garnsey's principle of valuing the whole, and afterwards allocating to the various assets their respective proportions of the whole. If that method was correctly adopted, there could be no possibility of valuing any part of the assets twice over.

Mr. Edgson had mentioned that amusing Act the Landlord and Tenant Act, and had drawn attention to goodwill value attaching to premises which that Act had brought to their notice. But if in valuing for the purposes of a prospectus a valuer were to value the goodwill attaching to buildings at the amount of the compensation which a tenant might expect to get under the Landlord and Tenant Act, he thought no company would be floated. Mr. Edgson had also raised a very interesting point with regard to the multiple shop let at £1,000 a year, but worth only £850 a year. He felt there was no true going-concern value in such premises ; the value was in the goodwill of the concern ; and it was misleading in a case of that sort for a valuer, in estimating the assets of the company, to place a value upon the lease of the premises as apart from the goodwill of the concern. He himself remembered a company floated not very long ago which owned a chain of shops throughout the London district, many of which had recently been taken on rack-rents. The valuers had placed going-concern values upon all those leases. The company had lasted about nine months, and those assets had become liabilities. Going-concern values of that nature were much to be deprecated ; they did surveyors and valuers the greatest possible harm. In discussing that difficult subject with members of the Stock Exchange and the kindred professions associated with company promotion, one had been impressed by the way in which the events of the past five or six years had detracted from their opinion of the utility of a surveyor's valuation upon a prospectus sheet. If as an Institution by discussing the matter they could do anything to ensure that in future the majority of valuations should be made upon a proper basis, they would be doing the

greatest service not only to themselves but to the investing public.

He desired to associate himself very heartily with the vote of thanks to Mr. Smith for a Paper which had been needed for a great many years.

Mr. J. W. TYLER (Fellow), referring to the association of goodwill with valuation as a going concern, mentioned an example of the way in which that was sometimes dealt with in connection with the stamp-duty assessment which was placed on the conversion of a large private company into a limited company. It had not been a public issue, but the shares had been divided between the partners. The valuation of the assets had been made a good many years ago but brought up to date, and a substantial sum for goodwill appeared in the balance sheet. The business was of rather an unusual nature, its assets consisting largely of land and buildings. When the question of stamp duty arose, the point was taken as to whether in taking a valuation as a going concern, with the item of goodwill included in the balance sheet, the amount was not being covered twice. In the end he had been asked to say what was the effect on the valuation figure of the assets as a going concern of goodwill being included in the transfer figure. It had been a difficult calculation, because some of the buildings were concerned in the rather peculiar nature of the firm's operations. He had been asked, among other things, to consider the value of those assets if passing to another concern carrying on a similar business but not using the well-known name of that firm. That was a problem which he had found it difficult to solve. In the end he had suggested a figure by taking those assets item by item, adjusting them as he thought they ought to be adjusted to meet the hypothesis. His figure had been accepted.

Mr. RALPH ELLIS (Fellow) deprecated the practice of stating on a prospectus or balance sheet that the value of

land and buildings had been taken at cost less depreciation, &c. Factories varied to a great degree, and while workshops, such, for instance, as a small engineering works, comprising one or several buildings, capable of being used for a variety of purposes, were a simple matter, in the case of factories which were constructed for special purposes the buildings had value for those special purposes only, and were probably entirely valueless for any other. It therefore seemed to him that although a valuation based on cost was of use in arriving at a valuation for the particular purpose of the business in question, it was not a true criterion simply to use cost as value ; for, if one went over several works in the same trade, one would find that in one concern an enormous sum had been spent in adapting the works, whereas another concern had a more suitable site and had not spent anything like as much in adapting or preparing the works for the trade. The success or value of a works depended on its possibilities of producing goods at a market price, and if one works would produce the goods at a much lower cost than another, it was evident the actual cost of creating the works must be adjusted. One had to take into consideration suitability when the works were completed.

A previous speaker had argued that value could not be based on rental value ; but he thought it was necessary to ascertain what was the rental value to the particular business, because in the end it was a question of what that business could afford to pay for those premises as an annual item in the production of goods. He agreed with Mr. Tuckett that, in valuing works or factories, one must assume that it was not only a going concern but a successful going concern, because if it were not successful the value would be practically scrap value, and that was not the object of the valuation at all. It was a valuation upon the assumption that the business was going to continue. He thought comparison was a great factor in such valuations, but a great deal of judgment had to be used in that respect in comparing, not so much warehouses, as factory premises where the article in question was manufactured, because

the value must represent the value to the concern only, or practically so.

The PRESIDENT said it gave him great pleasure to put to the meeting the vote of thanks that had been so ably proposed, seconded and supported. Mr. Smith had said that his Paper was elementary, but it touched upon practically every point that any competent surveyor valuing a concern about to be converted into a public company should consider before putting his hand to paper.

He himself advocated that the assets of every limited company should be re-valued periodically ; concerns so managed would, in his opinion, always retain the confidence of the general public. When reading balance sheets of concerns he was always suspicious of the item described as " Stocks and stores in hand and in course of manufacture " as per the certificate of the manager " ; he always felt it better, in the interests of the shareholders, that those stores, stocks, and so on, should be annually valued by a competent valuer.

Goodwill presented a difficult problem in every class of business. He considered that a prudently managed concern should always write off the value at which goodwill stood in its balance sheet according to the principles generally upon which it was originally valued, *i.e.*, if it was a three years' basis, it should be written off in three years. To his mind the sooner that item was got out of the balance sheet, the better.

He thoroughly endorsed Mr. Tuckett's views. In the issues of capital that had been made since the War it would have been better if the valuations had been entrusted to Chartered Surveyors than to individuals whose ideas were usually based upon book values.

The question of obsolescence interested him, connected as he was with a certain number of commercial undertakings. It was a most difficult proposition to deal with when endeavouring to get proper allowances from the Income Tax authorities.

This was the last time he would appear before them as President at Ordinary Meetings. He saw before him the faces of many members who had attended on every occasion when a Paper had been read. He thanked them all for their attendance, which was greatly appreciated not only by the Council but by himself during his term of office as President.

It had been proposed, seconded, and supported by several speakers, that a hearty vote of thanks be given to Mr. Sydney Smith for his extremely interesting Paper, and he asked them to carry the motion with applause in the usual way.

The vote of thanks was enthusiastically carried by acclamation.

Mr. SYDNEY SMITH said he was very appreciative of the kind manner in which they had received the Paper. He thought he might safely say that the Paper had justified itself in the discussion which it had evoked. The opinions expressed would be of the greatest value to members. He thought there was nothing he could usefully add, and he thanked the members for the interest they had shown in the Paper.

THE ANNUAL GENERAL MEETING,

Monday, 1st June, 1931.

Mr. E. H. LEEDER (President) in the Chair.

The Report of the Scrutineers of the Ballot for the Election of the Council was read to the Meeting.

The Report declared that the following were duly elected a

COUNCIL FOR THE ENSUING YEAR.

Fellows.

ALAN ARNOLD	JOHN HERBERT HALL
JOHN EVANS BIDWELL	WILLIAM TIMOTHY HALL
JOHN FRIENDSHIP BOWDEN	DRYLAND HASLAM
CHARLES HERBERT BRESSEY, C.B., C.B.E.	ROBERT HENDRY
ALFRED JAMES BRICKWELL, C.B.E.	FRANK WILLIAM HUNT, c.v.o.
GEORGE TURVILLE BROWN	SYDNEY APPLETON KELLY
CHRISTOPHER CHART	HERBERT JAMES KING
HENRY FREDERICK COBB, C.B.E.	CUTHBERT LAKE
ROBERT COBB	LEWIS OSLER MATHEWS
HERBERT COVINGTON COLE, C.B.E.	ARTHUR WALKER MERRY
ARTHUR GEORGE CROSS	HENRY BURROUGHS NAPIER
JOHN EDMUND DROWER, C.B.E.	JOHN OSCAR NESBITT
CHARLES GERALD EVE	REGINALD HENRY POWELL
WILLIAM HAROLD EVE	JOHN SCOTT
HARRY FRANKS	HENRY EDWARD SHERWIN
GORDON THOMSON FREW	HARRY MERRIDEW STANLEY
SIR CHARLES HENRY GOTT	ROBERT HENRY RYNN STEWART
	JOHN MEDOWS THEOBALD
	PERCIVAL FOX TUCKETT

Professional Associates.

HOLROYD FERRIS CHAMBERS	DONALD GRAHAM MOTION
ORFEUR FREDERIC COOKE- YARBOROUGH	JOHN ARTHUR FERGUS WATSON

Associates.

COLONEL SIR GEORGE LOYD COURTHOPE, BT., M.C., M.P.
SIR HARRY COURTHOPE-MUNROE, K.C.

The Report of the Council on the affairs of The Institution and the Statement of Receipts and Expenditure for the year 1930 were read.

IT WAS RESOLVED—"That the Report of the Council and the Balance Sheet be received and approved, and be printed and circulated with the *Transactions*."

IT WAS RESOLVED—"That the thanks of The Institution be given to Messrs. C. DE LA QUINTANA and H. F. CHAMBERS for the efficient performance of their duties as Auditors, and that they be requested to continue their services for the coming year."

IT WAS RESOLVED—"That the thanks of The Institution are due and be given to the PRESIDENT, VICE-PRESIDENTS, and the other MEMBERS AND ASSOCIATES of THE COUNCIL, for the able manner in which they have administered the affairs of The Institution."

IT WAS RESOLVED—"That the thanks of The Institution are due and be given to Mr. H. ARTHUR STEWARD (the Honorary Secretary), to Mr. ALEXANDER GODDARD (the Secretary), and the other Officers of The Institution, for the able manner in which they have executed their several duties."

IT WAS RESOLVED—"That the thanks of The Institution be given to Messrs. A. E. BAYLIS, T. S. BRIGHT, C. S. BURKETT-SMITH, C. DE LA QUINTANA, J. G. ELSWORTHY, H. E. GILLET, H. A. GLOVER, OSWALD HEALING, A. F. HOOPER, A. G. KEEN, H. A. MACKMIN, J. G. MCSHEEHY, R. B. MANN, JOHN NICHOLSON, C. H. RILEY, J. A. ROSEVEAR, and K. B. STANLEY for their services as Scrutineers."

The CHAIRMAN presented the following Prizes won by Candidates in the Preliminary and Professional Examinations, 1931:—

THE "PENFOLD" GOLD MEDAL,

for the highest marks (over 75% of the maximum) in the Final Examination, to RICHARD WILLIAM JOLLY, who obtained 844 marks out of 1,000.

Mr. JOLLY was also the winner of

THE "GALSWORTHY" PRIZE,

Being the Interest accruing on a Sum of £500,

awarded to the Candidate in the Final Examination who,

having passed the Intermediate Examination in the Students Division, is found to have obtained the highest number of marks in the two Examinations combined.

THE "PENFOLD" SILVER MEDAL,

for the highest marks (over 75% of the maximum) in the Students and Non-Students Divisions of the Intermediate Examination, to ARTHUR WILLIAM CLARKE, who obtained 816 marks out of 1,000.

Mr. CLARKE was also the winner of

THE "DRIVER" PRIZE,

Being the Interest accruing on a Sum of £500,
for the highest marks obtained by a Non-Student Candidate in the Intermediate Examination.

THE "WAINWRIGHT" PRIZE,

Being the Interest accruing on a Sum of £500,
awarded to the Candidate in the Final Examination who, having passed the Intermediate Examination, in the Non-Students Division, is found to have obtained the highest number of marks in the two Examinations combined, to LESLIE FRANK KIMBER.

THE "CRAWTER" PRIZE,

Being the Interest accruing on a Sum of £200,
for the best work in "Principles and Practice of Valuation," to JOHN JOHNSON NIXON, who obtained 90% of the maximum marks.

THE "INSTITUTION" PRIZE OF THE VALUE
OF £15 15s.

awarded to the Candidate at the head of the list in the Students Division of the Intermediate Examination, to ARTHUR CHARLES MANUEL, who obtained 810 marks out of 1,000.

Mr. MANUEL was also the winner of

THE " CONSTRUCTIVE AND WORKING
DRAWINGS " PRIZE OF THE VALUE OF £5 5s.

having obtained full marks in the subject.

THE " SPECIAL " PRIZE OF THE VALUE OF
£10 10s.

to STEPHEN ERNEST SCAMELL, with an aggregate of 796 marks out of 1,000.

THE " QUANTITIES " PRIZE OF THE VALUE
OF £5 5s.

to JAMES EDGAR DICKSON, who obtained 84% of the maximum marks.

THE " MELLERSH " PRIZE,

Being the Interest accruing on a Sum of £100,

for the best work in " Outdoor Forestry, Timber Valuing
" and Measuring," to REGINALD FREDERICK HUDSON
STEPHENSON, who obtained 73% of the maximum marks.

THE " SCOTTISH " PRIZE,

awarded to the Candidate from Scotland who obtained the highest number of marks in the Intermediate Examination, to THOMAS SCOTT CRAIG, who obtained 707 marks out of 1,000.

Mr. GRAIG was also the winner of

THE " BEADEL " PRIZE,

Being the Interest accruing on a Sum of £200,

for the best work in the subject of " Agriculture," having obtained 78% of the maximum marks.

THE " JULIAN ROGERS " SCHOLARSHIP,

awarded to the Candidate at the head of the list in the Preliminary Examination, to ALAN STANLEY WHIDDINGTON, who obtained 341 marks out of 500.

THE SIXTY-THIRD ANNUAL REPORT OF THE COUNCIL.

ANNUAL GENERAL MEETING,

Monday, 1st June, 1931.

The year under review will be marked in the history of The Institution as that which saw the incorporation of the word "Chartered" in its title, a change which received the approval of His Majesty's Privy Council in November. While there must be cause for regret in the passing of a name widely known and honoured for fifty years, the Council feel that this important step, which was only taken after full consultation, through the County Branches, with members generally, is more than justified. The new title of The Institution serves to emphasise the fact that its members, and they only, have the right to describe themselves as Chartered Surveyors, and, at the same time, acts as an automatic and continuous reminder to the public of the significance of that designation.

Mr. Herbert Arthur Steward, whose father, the late Mr. H. T. Steward, was elected President in 1904, and whose firm, Messrs. Hunt & Steward, are Surveyors to the Paddington, Cadogan and other important London estates, was elected Hon. Secretary of The Institution in the place of Mr. A. Norman Garrard, who retired last session.

Messrs. William Day, John Maughan and H. D. A. Watney retired from the Council at the end of last session. The sincere thanks of the Council are due to these gentlemen for the loyal and unselfish devotion with which they carried out their duties as members of the Council and of different Standing and other Committees during their years of office.

Membership.

In accordance with usual custom, the tables showing the membership statistics of The Institution to date as compared with those of previous years are given below.

TABLE A.

	Honorary Members.	Fellows.	Colonial Fellows.	Professional Associates.	Associates.	Probationers.	Students.	Total.

Honorary Members ... 29

Colonial Fellows 137

1931 Grand Total ... 7594

In 1883, "Associates" were divided into "Ordinary" and "Professional" Associates.

The list of members whose death has occurred since the publication of the last Annual Report is again a heavy one, and includes a Past-President and other names of note in the profession. Mr. J. D. Wallis, Manchester, whose membership dated from 1883, was widely known as an expert on compensation cases, and for six years was one of the official arbitrators under the Acquisition of Land Act, 1919, an appointment which he relinquished on his election as President in 1925. His is a loss which can ill be borne by The Institution and the profession he so faithfully served. Among other members of long standing whose death must be mourned are: Mr. F. J. Brown, Tring (1888), Mr. John Gilchrist, Glasgow (1899), and Mr. C. P. Hall, Bedford (1884), all Past-Members of Council; Sir David Burnett, London (1881), a past Lord Mayor of London, and Mr. A. A. Hudson, K.C. (1881), who was Chairman of the Tribunal of Appeal under the London Building Acts; Mr. E. J. Gairdner, St. Neots (1876); the Hon. C. T. Parker, Corsham (1880); Mr. F. J. Coverdale, Billericay (1880); Mr. W. H. Messenger, Guildford (1882); Mr. James Merrett, London (1884); Mr. J. B. Watson, Petworth (1884); Mr. A. C. Udney, Brighton (1884); Mr. H. F. Lofts, London (1884); Mr. W. J. Gibbon, London (1886); Mr. W. T. Jackson, Sittingbourne (1887); Mr. H. M. Ellis, London (1888); Mr. J. T. Smith, Wilmslow (1888); Mr. J. H. Taylor, Turner's Hill (1888); Mr. Edward Smith, London (1889); Mr. G. C. Lambert, London (1889); Mr. W. H. Stucke, Johannesburg (1889); Mr. F. W. Jones, Oxford (1890); Mr. William Webb, Ringwood (1890); Mr. William Little, London (1891); Mr. Jabez Mann, Sevenoaks (1891); Mr. E. B. Oakley, Bournemouth (1891); Mr. R. J. Cooper, London (1891); Mr. G. G. Stanham, London (1891); Mr. C. M. Stanford, Colchester (1891); and Mr. E. J. Partridge, London (1891). Obituary notices of these and other well-known members have already appeared in the *Journal*.

Finance.

In the Accounts for 1930 the recommendation of the auditors that the examination fees received in the autumn of the preceding year should be brought into account for the year in which the examination is held, and expenditure in respect thereof incurred, came into operation. From this year, therefore, the receipts and expenditure on examination account will be properly comparable.

The income and expenditure account shows that The Institution has enjoyed a satisfactory financial year, receipts from subscriptions, invested funds and other sources properly classed as income, and balance on examination account, having exceeded expenditure by £1,690, while, in addition, £1,634 was received on capital account from the entrance fees of new members. This has enabled the auditors to recommend the investment of £3,000, a recommendation which has been acted on by the Council, by an addition of that amount to The Institution holding in Metropolitan Water Board 3 per cent. B Stock.

The Examinations.

The examinations held in March were the last to take place under the hitherto existing Rules and Syllabus. Next year the altered Rules and Syllabus will come into operation, whereby the scope of the examination is being widened to include new subjects of a fundamental character, a study of which is desirable for better understanding of the more specialised sections of knowledge required by the qualified surveyor. These fundamental subjects will be taken in Part I. of the new Intermediate, which, if taken separately, will be open to candidates under 19 years of age. Some subjects have been transferred from the old Intermediate to the new Final, so as to provide a gradual ascent throughout the whole of the examinations from general to specialised study.

As indicating the extent to which the examinations are becoming recognised in the local government service, it is interesting to record that the Institution of Municipal and County Engineers decided, during the period under review, to accept the Final Examination (Sub-division III., Building) as qualifying for membership.

Tables C and D show the number of candidates who sat for the examinations this year, and the number who passed. In addition, 123 candidates sat for re-examination in their Typical Subject, and of these 91 were successful.

The Scottish candidates numbered 58, of whom 27 entered for the Intermediate, 22 for the Final, one for the Direct Fellowship, and 8 for Typical Subjects. Of these, 38 satisfied the examiners, and 12 were referred back in Typical Subjects.

Six candidates sat in Dublin, 5 for the Intermediate Examination and 1 for the Final. Of these, respectively, 4 and 1 were successful.

The Special Diploma Examinations.

The Rating Diploma Examination only was held in 1930, as insufficient application for the others were received to enable the latter to take place in a non-triennial year. Five candidates sat for the Rating Diploma, of whom two, Mr. Reginald Poole (Liverpool) and Mr. H. G. Wood (Durham), were successful.

The Syllabus for the Rating Diploma Examination has been reviewed to bring it up to date with recent rating legislation. The thanks of the Council are due to the Rating Diploma Section whose recommendations in this respect proved of much assistance to them. The revisions will operate for the first time in the examinations of 1932.

The Examiners.

Once more the Council must record their indebtedness to the Examiners for the manner in which this year, as always, they have performed their heavy and responsible task. There are no changes to be recorded, as compared with the previous year, in the personnel of those carrying out the professional examinations, but for the Special Diploma in Rating, Mr. H. P. Nye succeeds Mr. Isaac Dixon in Valuations, and Mr. Michael Rowe follows Mr. E. M. Konstam, K.C., as Examiner in Law and Procedure.

The University Scholarships.

The new regulations for the Scholarships tenable at Cambridge University took effect for the first time this year, the awards being now made by selection instead of by competitive examination as formerly. Candidates are required to have passed, or be eligible for exemption from, the previous examination of Cambridge University, and the award is made after considering the general school record of each applicant and his future intentions concerning the profession. Weight is also given to personality and other qualifications which would seem to render an applicant specially suitable for his future calling.

There were nine candidates for the three-year Scholarship of £100, from whom Mr. A. I. N. Roberts, of Trinity College, Dublin, was selected as possessing the highest qualifications, judged on the above standards, for this year's award. Owing, however, to the exceptionally high level of the candidates as a whole, it was decided that the

objects of The Institution in this respect would be advanced by the special award of a second Scholarship of £75 for three years. This was granted to Mr. G. R. S. Pepler, of University College, London.

The College of Estate Management.

In the recent professional examinations, out of the 384 candidates, including those from Scotland and Ireland, who were successful in the Intermediate, and the 286 who passed the Final, 254 and 182 respectively were prepared by the College, as were 10 out of the 12 candidates who passed the Special Single Examination for degree-holders and 4 out of 6 in the Direct Fellowship. Six Institution prizes and medals were awarded to College students.

The Annual Summer Meeting.

At the invitation of the South Wales and Monmouthshire Branch the Annual Summer Meeting was held in June at Cardiff, a place and occasion which marked in an appropriate manner the election, in the person of Mr. Ernest H. Leeder, of the first President of The Institution from Wales. Thanks to the admirable arrangements which were made for the entertainment of visiting members by the South Wales and Monmouthshire Reception Committee, the visit to Cardiff was generally voted one of the most enjoyable ever held by The Institution. The Council are greatly indebted to the Reception Committee, to the Lord Mayor and Corporation of Cardiff for their courtesy in permitting the use of their splendid City Hall, and to Lord Treowen, Lady Blythswood, the proprietors of the National Oil Refineries, and their other hosts at the various places of interest visited, for their share in making the meeting the success it was.

The Publications.

The following Papers were read and discussed at Ordinary General Meetings during the session:—

Date.	Subject of Paper.	Author.
1930.		
Nov. 10...	The Opening Address ...	The President.
Dec. 8 ...	The Land Drainage Act, 1930	Mr. A. T. A. Dobson, (As- sistant Secretary, Min- istry of Agriculture).
1931.		
Jan. 12 ...	St. Paul's : Its building and recent restoration	Mr. J. E. Drower, C.B.E. (Member of Council).
Feb. 9 ...	Claims for Compensation under the Public Health and Roads Improvement Acts, 1925	Mr. Christopher Chart (Member of Council).
March 9...	Suggested Amendments of the London Building Act, 1930	Mr. G. H. Lovegrove (Fellow).
April 13	Uniformity in the Valuation of Property for Rating Purposes	Mr. J. R. Toovey (Professional Associate, Special Diploma in Rating)
May 11 ...	Valuations of the Assets of Public Companies	Mr. Sydney A. Smith (Fellow).

Attendances at meetings continue to be satisfactory and the discussions interesting and instructive. The Council must record their indebtedness to the lecturers for the time and labour they gave to preparing and delivering Papers, and to those who have added to their value to members by elucidating important points in discussion.

The List of Members for 1931, following the precedent of last year, has been circulated in increased numbers to public bodies, commercial corporations, and members of other professions to whom the record of the names and addresses of Chartered Surveyors is likely to prove of value. The Schedule of Professional Charges authorised by The Institution was this year printed with the List of Members for the first time.

Apart from the Papers, set out in the above table, which comprise the *Transactions* for the year, shorter articles of interest to all sections of the profession, as well as reports of the various activities of The Institution, have

appeared, month by month, in the *Journal*. Members are reminded that offers of Papers for the *Transactions* or articles for the *Journal*, the latter preferably not exceeding 1,500 words, are welcomed.

The Library and Collections.

A number of new books on professional subjects and new editions of old works already in the Library have been purchased during the year. There have, however, been no purchases of topographical or other works of special interest calling for individual mention.

In order to ensure that the Library is kept in the up-to-date condition necessary to make it of the utmost value to members, copies of the catalogue are being sent to recognised experts in different subjects, with a request that they may offer suggestions for the purchase of books on their particular subjects not already on the shelves, or for the removal of works which have become out of date.

It is satisfactory to record that The Institution's Forestry Exhibit at the Royal Agricultural Society's Show at Manchester last July was awarded a bronze medal. An excellent position was secured for the exhibit which, coupled with the recognition it received, served a useful purpose in bringing The Institution, and the objects for which it stands, before the agricultural community.

Several new examples of fungoid disease and insect damage have been added to the Forestry Museum during the past year. The outstanding addition, however, was a collection of planks from the Yorkshire estate of the Marquis of Zetland. This collection, which was awarded the silver medal at the Harrogate Royal Show, was presented to The Institution by Lord Zetland through his agent, Major Nelson Rooke (Fellow), and includes a number of perfect specimens. Mention must also be made of the worked-up Coppice Exhibit presented by Mr. C. F. Stone (Fellow), which has been placed in the lower room and will be added to in the near future.

The Standing and Special Committees.

The meetings of the Council and the Standing and Special Committees and Sub-Committees held during the year numbered respectively 13 and 101 as compared with 11 and 96 last year.

The work of the Parliamentary Committee has been exceptionally heavy, having included the preparation of evidence for submission to the Departmental Committee on Rent Restriction, before which Messrs. Dendy Watney and H. E. Sherwin appeared as witnesses for The Institution ; the compilation of a lengthy list of amendments to the Land Valuation Bill, as introduced last Session, which amendments, however, were directed, at the wish of the Inland Revenue authorities, solely to improving the Bill from a practical and technical standpoint on the assumption that the policy of land taxation had been adopted by the Government. Amendments were also suggested in the Finance Bill of 1930, the Land Drainage Bill, the Town and Country Planning Bill, and the Public Works (Facilities) Bill, in the latter case, particularly, with considerable success and to the advantage of that measure. In addition ten private Bills were examined, and certain of their provisions, chiefly town planning proposals of a kind not authorised by general statute, brought to the notice of County Branches and members in the areas affected.

The Agricultural Marketing Bill and the Agricultural Land (Utilisation) Bill were also reported upon by the Agricultural Committee. The provisions of the latter Bill, apart from those relating to allotments, were condemned on the ground that under existing conditions they would fail to restore prosperity to agriculture or mitigate unemployment in spite of the great expenditure they involved. The views of the Council upon this measure were referred to in the debate on second reading in the House of Lords, and a letter in the *Times*, signed by representative officers of the Auctioneers' and Estate Agents' Institute, the Land Agents' Society, and The Institution, also attracted

considerable attention. The Agricultural Committee were also responsible for preparing the evidence given by Mr. J. E. Bidwell (Senior Vice-President) before the Departmental Committee appointed to enquire into the conditions of occupation of agricultural tied cottages. Other matters which came under the review of that Committee, and the Forestry Committee during the year, were the memorandum and resolutions on agricultural policy, issued by the Central Chamber of Agriculture ; the question of compulsory arbitration on rent ; cereal planting by machinery ; owner's liability to remove fallen timber from highways ; quick seasoning of hardwoods ; questions arising between vendors and purchasers of timber, and other subjects of enquiry by members.

Special Committees were set up to prepare evidence for submission to the Departmental Committee on the qualifications, training and recruitment of local government officers, and to examine and comment upon the Report on the assessment of compensation water drawn up by the Minister of Health's Advisory Committee on Water.

A report of the work of the Quantity Surveyors' Committee, which has greatly extended in recent years, is now issued separately, and will appear in due course.

The County Branches.

The activities of the County Branches during the year have been fully reported, month by month, in the *Journal*, and the value of their work to The Institution has once again been amply proved. The majority of the Branches were visited by the President and Secretary during the year, and it is evident that the interest shown by members in local Institution activities, even in scattered areas where from lack of convenient centres it has sometimes been difficult to secure large attendances, is being not only maintained but increased. For this satisfactory state of affairs credit must be given to the Chairmen, Hon. Secretaries, and Executive Committees, for whose valuable services the

sincere thanks of the Council are due. A table showing the membership and officers of the Branches on 1st January, 1931, appears in the current List of Members.

The Annual Conference of the Council with the Chairmen and the Hon. Secretaries of the County Branches was held on the 10th March, when the attendance from all parts of the country was full and representative. A report of the proceedings appeared in the April number of the *Journal*.

Without referring in detail to the activities of the Branches, the following list, although of necessity incomplete, sufficiently indicates the variety and usefulness of the subjects which have been discussed at meetings during the year: Town and regional planning ; rent restriction ; the Land Valuation Bill, 1930 ; the Housing Act, 1930 ; the progress of sanitary science ; agriculture and land development ; artificial manuring ; animal feeding ; the development of highway legislation ; the effect of modern legislation on the ownership and management of land ; the annual value of licensed premises ; the rating of special properties. Special mention must also be made of the evidence given before the Departmental Committee on Rent Restriction by the Scottish Branch ; it is understood that the Committee were greatly impressed by their Memorandum on the effect of rent control in Scotland and the manner in which the witnesses for the Branch presented their verbal evidence.

The Junior Organisation.

The programme of meetings, Papers and discussions arranged for evening meetings in London during the session was as follows: " The Town Planning of Built-up Areas," by Mr. R. Poole, P.A.S.I. (awarded the President's Prize); " The Breaking up of Large Estates and its Effect on the " Country," by Mr. John Clark, P.A.S.I. (awarded the Ryde Memorial Prize by the Chartered Surveyors' (1913) Club) ; " Some Notes on Building Society Practice, with " special reference to the Duties of the Surveyor," by Mr.

G. H. Sykes, P.A.S.I. ; an address by Mr. J. L. Crouch (Associate) on " The Lawyers' Delegation to America and " Canada " ; " Some Aspects of Advertising," by Mr. E. Barry Bowyer, P.A.S.I. ; and a debate on whether a policy of street widening was preferable to one of traffic restriction for dealing with the traffic problem in London.

The Annual Full Committee Meeting, at which representatives of sixteen Junior Branches were present in addition to the London and unattached Country Members, was held on 12th December, when various questions of professional and domestic interest were discussed.

The Annual Junior Dinner, at which 113 were present, was held the same evening, among the guests being included the President of The Institution and Sir Basil Blackett, K.C.B., K.C.S.I. The Annual Dance, arranged by the Junior Committee in aid of the Benevolent Fund, was held at the Criterion Restaurant, Piccadilly Circus, W., on 13th February, and was greatly enjoyed by the company present. The sale of tickets resulted, approximately, in a profit of £50.

A Junior Branch for Sussex was formed during the year, bringing the total of Junior Branches up to 17.

Mr. G. F. J. Morgan was awarded the Chartered Surveyors' (1913) Club Special Prize, presented for the first time this year, for making the greatest contribution to the success of the sessional meetings during the year otherwise than by the writing of a Paper.

The Chairman for the year was Mr. A. C. Savill, M.C., and the Hon. Secretary Mr. J. A. F. Watson. The names of the Junior Committee for the session appear in the current List of Members. The thanks of the Council are due to them and to those responsible for directing the activities of the Junior Branches throughout the country.

The Employment Register.

During the period under review there were 380 names entered on the Register, of which 142 were at one time or

another out of employment, 244 were desirous of improving their positions, and a further 14 were seeking part-time or temporary work. The appointments obtained through the Register numbered 108, of which 13 were in the land agency branch, 38 in the valuation branch, and 24, 32 and 1 respectively in building, quantities, and mining.

Senior Members are reminded that the Register exists not only to help the younger men to obtain employment, but also to assist the former in finding assistants possessing the qualifications and experience required. Members are therefore asked to communicate their requirements to the Secretary whenever a vacancy on their staff occurs.

Miscellaneous.

During the period under review The Institution was invited to collaborate with public authorities and kindred societies on a number of important matters, among which the following may be mentioned:—

Ministry of Health.—Departmental Committee on Rent Restriction and Control, of which Mr. C. Gerald Eve (Vice-President) was appointed a member.

Ministry of Agriculture and Fisheries.—Conference upon the Provisions as to Allotments in the Agricultural Land (Utilisation) Bill ; representatives, Messrs. W. T. Hall, H. E. Sherwin, and the Secretary.

Department of Scientific and Industrial Research.—Conference upon the Design of Steel Structures ; representatives, Messrs. J. E. Drower, C.B.E., Oswald Healing, and H. J. Leaning.

London County Council.—Advisory Committee on Charing Cross Bridge ; Advisory Committee on the Revision of the London Building Acts. Messrs. Dendy Watney and C. H. Bedells (Past-Presidents) were respectively nominated to these Committees.

Royal Institute of British Architects.—Technical and Economic Advisory Council for Promoting Uniformity

in Building Regulations ; representative, Mr. E. C. Harris.

International Federation of Surveyors.—Congress at Zürich ; representatives, Colonel H. C. Cole, C.B.E., and Mr. C. S. Wootten, who were responsible for the work of the Congress Committee on Land Improvement and Development.

British Engineering Standards Association.—Committees on Preparation of Standard Specifications for Portland Cement, Granite Kerbs ; Glass-Enamelled Fireclay Pipes ; Asbestos Pipes ; Breeze and Clinker Slabs ; Cast Concrete Roofing Tiles ; the Reorganisation of the Association's Building Section.

Royal Sanitary Institute.—Congress at Glasgow ; representatives, Messrs. A. Blair, and James Barr.

Mr. W. T. Hall (Vice-President) and Mr. H. E. Sherwin were nominated respectively to succeed the late Mr. Charles Fisher, C.B.E., on the Council for the Preservation of Rural England, and the Electricity Commissioners' Conference on the Provision of Electricity in Rural Areas. Mr. Dendy Watney was re-nominated to act for a further period of five years as a member of the Tribunal of Appeal under the London Building Acts. Messrs. C. H. Bedells, S. A. Kelly, F. Longstreth Thompson, W. R. Davidge, and Sir Theodore Chambers, K.B.E., were nominated to serve on the Council of the International Federation for Housing and Town Planning.

Letters were addressed to the County Court Rules Committee and the County Court Judges Association suggesting that it was to the public advantage that persons nominated to act as arbitrators in technical cases should possess recognised professional qualifications.

A donation of 200 guineas was made to the University of Cambridge towards the cost of the scheme for enlarging the Agricultural, Biological and Allied Sciences Department of the University, for which £700,000 had been promised by the Rockefeller Trust.

The sum of 25 guineas was also presented towards the expenses of the Building Industry Council of Review, whose Interim Report attracted attention in the building trade and the allied professions.

The Hon. Sir R. Stafford Cripps, K.C. (Associate), was appointed Solicitor-General ; Mr. G. F. Page (Fellow) and Captain C. N. S. Sutton (Professional Associate) were elected President respectively of the Auctioneers' and Estate Agents' Institute and the Land Agents' Society ; Mr. T. Moore (Fellow) was elected President-in-Chief of the Institute of South African Architects ; Major V. B. Rogers, D.S.O., M.C., was appointed a Deputy-Lieutenant for the County of London.

Mr. E. J. Silcock, M.I.C.E. (Member of Council) was appointed a member of the statutory panels set up by the Reservoirs (Safety Provisions) Act, 1930, for the design, supervision and inspection of large reservoirs.

Among the important appointments obtained by members during the year the following may be mentioned :—

Mr. HARRIS FIRTH (Fellow)—Chief Valuer, Board of Inland Revenue.

Mr. T. PEIRSON FRANK (Fellow)—Engineer and County Surveyor to the London County Council.

Mr. H. F. CHAMBERS (Professional Associate)—Land Steward to the Duchy of Cornwall Estates of H.R.H. the Prince of Wales.

Mr. E. H. SAVILL (Fellow)—Deputy Surveyor of Crown Lands, Windsor.

Mr. W. W. NEEDHAM (Fellow)—Valuation Officer, City and County of Exeter.

Mr. R. W. PEAT (Professional Associate)—Assistant Land Commissioner, Ministry of Agriculture and Fisheries, for Northumberland, Durham, and Yorkshire.

ADDENDUM.

Notes from the Reports of the Examiners, 1931.

Readers of these notes are reminded that they are written with the object of indicating to those responsible for the training and instruction of examination candidates the directions in which failures have occurred rather than to comment generally upon the examination work of the year under review. It will, therefore, suffice to mention that a generally satisfactory standard was attained in the following subjects: Agriculture ; Agricultural Valuations ; Report I. ; Land Drainage ; Forestry (Indoor) ; Law of Compulsory Purchase ; Law of Vendors and Purchasers ; Support and Subsidence ; Mine Rents and Royalties ; Book-keeping ; and Surveying and Levelling.

Bad spelling is again the subject of comment, the following words in particular having apparently presented difficulty: tendency, luxuries, suburban, divisible, original, gilt-edged, cotton, consols. Grammatical errors, for example, confusion between transitive and intransitive verbs, such as " raise " and " rise," and misuse of common words and phrases, were also reported. Marks were frequently lost by irrelevant answers, or by failure to digest the examiners' questions and directions ; many candidates wrote answers which they afterwards had to cancel or, worse still, jumped to wrong conclusions because a question bore a superficial resemblance to some other problem with which they happened to be familiar. Some candidates foolishly wasted time in criticising the fairness of the questions.

Sub-Division I.

Forestry.—Standard as a whole satisfactory, but some weakness was shown in the identification of twigs and in the elements of commercial afforestation.

Farm Homesteads.—Standard distinctly lower than last year, the morning paper in particular being badly done by the majority of candidates.

Agricultural Botany.—On the whole good, but there was a general inability to illustrate answers by intelligible sketches of plants.

Geology and Soils.—Disappointing ; few candidates were able to present a sound geological description of a county with which they were familiar ; sketching, with a few exceptions, was poor and meaningless.

Animal Physiology.—The papers generally were indifferently done.

Land Drainage.—Too little attention was apparently given to the calculations of the discharge capacities of drains.

Sub-Division II.

Valuations.—The examiner in the Intermediate papers reports that there was too frequently a lack of method in setting out the details and workings of valuations, which not only made it difficult for him to follow the candidates' line of reasoning, but also led to errors in their work which might have been avoided by a straightforward and systematic arrangement of the stages required to arrive at the valuation. The following were among the mistakes which ought not to have occurred: Valuing a ground rent at a high rate per cent., and the reversion to the rack-rent at a low rate ; valuing a freehold let on lease for the term of the lease only ; valuing ground rents with a valuable early reversion on the dual-rate tables ; use of an almost constant rate per cent. for all types of property ; and treating the valuation of a life interest as though the value of the remainderman's interest was to be ascertained.

In the Final Examination the number of candidates who correctly worked out the simple problems set on the use of tables was disappointingly small. The question on rating

practice was also badly done ; some candidates actually arrived at a gross estimated rental which was higher than the gross rent received for the hereditament, viz., a house let at twelve shillings per week, the landlord paying rates and taxes.

Report.—Literary standard poor ; setting out and arrangement of material confused.

Fixtures, Dilapidations, and Easements.—The number of those who failed to obtain pass marks was greater than for many years, and their standard lower ; that of the successful candidates was in many cases conspicuously high. In the former category failure was chiefly due to the wrong application of law to the facts stated by the examiner, and to reading difficulties into the questions, or suspecting tricks where none existed ; *e.g.*, in the questions on the liability to repair casement and skylight windows, and a lessor's remedies against his lessee for breach of the usual repairing covenant, and whether such remedies or any of them were dependent on the express terms of the lease. Some absurd answers were given in defining the terms " dominant tenement " and " emblements."

Sub-Division III.

Constructive and Working Drawings.—The standard generally was below the average, and draughtsmanship in particular showed no improvement on recent years. The questions on joinery work were badly done.

Quantities.—All but a small percentage of candidates in the Final Typical were guilty of slovenly presentation of their work, and disregarded such matters as headings, numbering of columns, "setting out," and corrections. Insufficient use was made of coloured inks. In the Intermediate Typical the standard in the Non-Students Division was much lower than last year. The faults to which attention is specially drawn were in connection with abstracting ; a large number of the unsuccessful candi-

dates failed to recognise the importance of good spacing, neatness, clear main headings, sub-headings, indication of supers, runs and Nos., especially when varying on the same sheet, systematic arrangement of detail items, correct casting and reducing, and the need for some degree of speed.

In the lower papers, with a few exceptions, candidates were defective in knowledge of methods of measurement and their application. They appeared unacquainted with the materials they were called upon to use, and were unable properly to describe the work to be measured ; lack of method, particularly in their failure to use known and figured sizes as a basis for their dimensions was evident. Several candidates ignored over-all figures and took roofs of a size which would slide down inside the building. Others failed to allow for thickness of frames and plaster.

Report.—Standard throughout low ; many of the reports submitted would have been unintelligible to the client referred to in the paper.

Specifications.—The subject of reinforced concrete was little understood.

Iron and Timber Roofs.—Most candidates drew the O.G. gutter in section incorrectly. Where deal common rafters to the steel trusses were omitted, and roof boarding fixed direct to the deal purlins, in many cases the purlins were spaced too far apart. Several candidates glazed the wrong slope of the north-light roof truss.

House Drainage and Plumbers' Work.—Improvement was shown in general knowledge of sanitary principles, in particular of the methods of intercepting and ventilating house drains and of jointing pipes. But there was still a marked incompetence in levelling ; 38 per cent. of the candidates could not calculate gradients and work out depths of chambers ; in addition there were others who forgot to account for the 3 inches lost in an intercepting trap. There was also a surprising unfamiliarity with normal stock lengths and sizes of pipes for plumbing. The

work of a small group of candidates showed, in the examiner's opinion, evidences of instruction on unsound lines.

Sub-Division IV.

Report.—This paper was poorly done ; only one candidate attempted with any precision to deal with the acquisition of royalties. Not one referred to either of the Royal Commissions which have reported upon the mining industry since the War.

General Subjects.

Economics.—Standard on the whole higher than in previous years, but there was still a tendency to repeat textbook phrases without a thorough understanding of principles and their application to a particular problem.

Dilapidations.—A distinct improvement on recent years, but there was still apparent some unfamiliarity with the effect of recent legislation on the law of this subject, in particular the Rent Restriction Acts, Housing Acts, and Public Health Acts.

Surveying and Levelling.—The general standard shows improvement ; there was failure, however, to appreciate the necessity for check lines in a chain survey ; in the computation of a simple inaccessible height ; and in constructing maps of familiar country. Too little attention appears to have been given to the precise meaning of terms used by land sureyors, *e.g.*, “ run of the bubble ” and “ check.” There is some room for improvement in the application of logarithms to trigonometrical formulæ.

Book-keeping.—Last year's improvement maintained ; there was some inability, however, to distinguish between an income and expenditure account, and a receipts and payment account.

Copyholds. — Calculations for Lord's Compensation again were, on the whole, badly done.

We have audited the Income and Expenditure Account and Balance Sheet for the year ended 31st December, 1930. We have obtained all the information and explanations that we required; and in our opinion such accounts are properly drawn up so as to exhibit a true and correct state of The Institution according to the best of our information, and the explanations given to us, and as shown by the books of The Institution.

TANSLEY WITT & CO.,

Chartered Accountants.

5, Chancery Lane, London, W.C. 2.

28th April, 1931.

We report that with the assistance of the Chartered Accountants we have examined the foregoing Accounts for the year ended 31st December, 1930, and find same to be correct. We have also examined the Deeds and Securities, and certify that they were in possession and safe custody as on 31st December, 1930.

ROYAL CHARTERS.

Royal Charters are granted by the Sovereign on the advice of the Lords of His Privy Council.

The grant of a Charter to a professional society may therefore be taken as indicating that the highest authority in the kingdom is satisfied that a high standard of professional qualification is required for membership, and that the society is in a position to advance technical knowledge, to raise and maintain the status of the profession it represents, and to provide information on subjects coming within its scope to the public advantage.

The Chartered Surveyors' Institution

(INCORPORATED BY ROYAL CHARTER)

Is established under the terms of its Royal Charters :—

1. To secure the advancement and facilitate the acquisition of that knowledge which constitutes the profession of a Surveyor, viz.—the art of determining the value of all descriptions of landed, mineral and house property, and of the various interests therein; the practice of managing and developing estates; and the science of admeasuring and delineating the physical features of the earth, and of measuring and estimating artificers' work.
2. To promote the general interests of the profession, and to maintain and extend its usefulness for the public advantage.

THE INSTITUTION was founded in 1868 under the title of The Institution of Surveyors. It was incorporated under Royal Charter in 1881, the name then being changed to The Surveyors' Institution. A further Charter was granted in 1921. In October, 1930, by permission of H.M.'s Privy Council the title of the Institution was changed to The Chartered Surveyors' Institution. Entrance examinations to qualify for membership were started in 1881, and became compulsory in 1891. The Institution was, therefore, the first professional society, other than those representing law and medicine, to initiate severe examination tests as the qualification for membership.

PRIVILEGES OF MEMBERSHIP.

Fellows and Professional Associates are permitted to place the initials F.S.I. and P.A.S.I. respectively after their names, and to use the designation "Chartered Surveyor," subject to the provisions of the By-Laws. Membership of the Institution, as indicated by the use of these letters and designation, is laid

down as an essential qualification for many official and other appointments. Its value is also becoming increasingly recognised in connection with work for trustees, mortgage valuations, arbitrations, evidence before the Courts, etc.

Members, both corporate and non-corporate, have the right to attend the Ordinary General Meetings, meetings of their County Branch, and, if under 33 years of age, the Junior Meetings, and have the privilege of introducing visitors. They receive the Journal, which is issued in twelve monthly parts, and a copy of any other printed publication issued by the Institution. They may avail themselves of the Queries and Replies section of the Journal, and so secure the benefit of the knowledge and experience of fellow members in questions arising in daily practice. They may use the Library and Loan Library and the Employment Register.

The Incorporated Benevolent Fund of the Institution is established to provide for the needs of members and their dependents who, by reason of age, sickness or other unavoidable misfortune, are unable to support themselves. It is maintained entirely by voluntary contributions.

ORGANIZATION AND ACTIVITIES.

The affairs of the Institution are under the management of a Council, elected annually by ballot of all corporate members. The Council are advised by the County Branches and a number of Standing and Special Committees appointed to consider the various matters referred to them. Their work includes the examination of Parliamentary Bills affecting the valuation, management, and development of landed property, and the various interests therein; the preparation of memoranda, and the submission of evidence for the use of Government Departments, Royal Commissions and departmental and other Committees in connection with matters upon which the collective knowledge of the profession would prove of assistance; and the rendering of advice to Imperial or Local Authorities when called upon to do so by statute or otherwise.

In addition to their activities in the advancement of the public interest, the Council have continually in view the elevation, ethical as well as intellectual, of the profession which they represent. In addition to the practical help which they have afforded to places of professional instruction, the foundation of scholarships and the furtherance of technical education generally, they have felt it their duty strictly to administer the rules of conduct which all members are required by the By-Laws to observe. The Council have also, through their Professional Practice Committee, used their influence in inspiring a high ideal of professional honour among members.

The Session of the Institution commences annually on the Second Monday in November, and continues to the end of May. The Ordinary General Meetings are held monthly during the Session, and in addition two Meetings of members practising in Quantities are arranged. At these Meetings original papers on

professional subjects are read and their merits fully and freely discussed. Every member has the privilege of introducing visitors.

THE COUNTY BRANCHES.

The organization of the Institution includes a system of Metropolitan and County Branches, the object of which is to enable the Council to give the considered views of the profession from all parts of the country on matters of public interest ; to afford opportunity for members generally to take an active part in the affairs of the Institution ; and to assist the Council in ascertaining their local wants and wishes. The system includes machinery for local representation on, and succession to, the Council and Standing Committees and provides, in addition, opportunities for the discussion of professional questions and social intercourse at centres easily accessible to members in country districts. The affairs of each Metropolitan and County Branch are managed by an Executive Committee elected annually.

THE JUNIOR ORGANIZATION.

The Junior Organization was established for the benefit of the younger members of the Institution, to bring them into closer touch with the Council, and, by fostering among them an interest in professional affairs, to prepare them for higher office in the future. The work of the Junior Organization is administered by a representative Central Executive Committee which is responsible to the Council for their affairs as a whole. Junior branches in the County Branch districts have been established where justified by numbers and the existence of accessible local centres.

SCHOLARSHIPS AND PRIZES.

The Institution offers each year a scholarship of £100 per annum, tenable at Cambridge University for three years, in a course of study selected by the successful applicant out of several prescribed by the Council, and three one-year courses of £125, also tenable at Cambridge unless the selected candidate has applied to use his emoluments for the purpose of travel. The holder of a one-year course is required to state the direction in which he wishes to study, and to undergo such courses of lectures and instruction as may be prescribed, and to carry out an original piece of work under his supervisor's guidance. Detailed particulars of the conditions may be obtained on application to the Secretary.

A number of valuable prizes are offered in connection with the Institution Examinations.

MEMBERSHIP.

The total membership of the Institution is over 6,700, and consists of four classes, viz.: HONORARY MEMBERS, FELLOWS, PROFESSIONAL ASSOCIATES, AND ASSOCIATES. There are also classes of PROBATIONERS and STUDENTS attached to, but not corporate members of, the Institution.

STUDENTS.—In order to qualify for admission to the Class of Students, candidates must be between the ages of 18 and 21, must have passed either the Preliminary Examination of the Institution or one of the specified Examinations accepted in lieu thereof, and must be either (1) pupils or technical assistants in the offices of members of the Institution or other persons substantially engaged in one or other of the branches of the profession as defined above; or (2) studying with a view to entering the profession at such places of professional instruction as the Council may approve.

Candidates under the age of 21 are advised to become Students; for, in addition to the use of the Library and Loan Library, receipt of the Journal and the right to attend meetings, they are entitled to substantial advantages in the Professional Examinations in respect of fees and percentage of pass marks.

Students remain attached to their class until the end of the calendar year in which they attain the age of 21, and may then be enrolled in the class of Probationers.

PROBATIONERS are persons whose period of Studentship has expired or who have passed the Intermediate Examination. They may continue as Probationers until the end of the calendar year during which they shall have been for five years enrolled in that class, or until the end of the third calendar year after that in which they passed the Intermediate Examination, whichever period first terminates.

All candidates for the Intermediate Examination are required to give an undertaking that, if successful in passing, they will forthwith become Probationers and so remain for the full term allowed by the By-Laws.

Probationers are entitled to use the Library and Loan Library, to attend meetings and to receive the publications.

PROFESSIONAL ASSOCIATES.—Candidates desirous of election to the class of Professional Associates must be not less than 21 years of age, and must have passed the Preliminary Examination (or an examination accepted in lieu thereof) and the Intermediate and Final Examinations. Candidates holding a University degree in subjects approved by the Council as appertaining to the surveying profession may take a single examination in place of the Intermediate and Final. After passing the examinations, candidates are eligible for election to the class of Professional Associates, provided that they are no longer *in statu pupillari* and are actually engaged in professional work as Surveyors.

Holders of the B.A. and B.Sc. degrees in Estate Management, granted respectively by the Universities of Cambridge and London, may be elected as Professional Associates without examination on satisfying the Council that they are engaged in professional work and have received proper practical training in the profession.

FELLOWS.—Candidates must be not less than 30 years of age, must have passed either (1) the Preliminary or an exempting examination and the Intermediate and Final Examinations, or

(2) the Direct Fellowship Examination ; and must have held for five years, and be holding, a position of complete responsibility equivalent to that of a principal in an established business.

There are special arrangements for the election of Colonial Fellows.

ASSOCIATES must be persons over 21 years of age, not Surveyors by profession, whose pursuits are such as to qualify them to co-operate with Surveyors in the advancement of professional knowledge.

HONORARY MEMBERS must be persons who, either by reason of their position or experience, or their eminence in science, may be enabled to render assistance in promoting the objects of the Institution ; but are not engaged in practice as Surveyors in Great Britain or Ireland. They have the privilege of being present and taking part in all Ordinary General Meetings, and of access to the Library, but no right of voting, discussing or otherwise interfering in the affairs of the Institution ; nor are they called upon to contribute to its funds.

ELECTION TO MEMBERSHIP, other than Honorary Membership, is by ballot of all the corporate members of the Institution. All Fellows, Professional Associates and Associates are required, within twelve months of their election, to attend an Ordinary General Meeting, or, in the case of members residing at a distance from London, a meeting of their County Branch, for the purpose of formal introduction, and to sign the Register. They are also required, within the same period, to deliver to the Council an original paper on a subject connected with the profession, or to make a donation to the Library Fund.

RATES OF SUBSCRIPTION.

The following are the rates of contribution to the funds :—

	Annual Subscription.				Admission Fee		
	£	s.	d.		£	s.	d.
<i>Student</i>	1	1	0	.	—		
<i>Probationer</i>	1	1	0	.	—		
<i>Associate</i>	2	2	0	.	3	3	0
<i>Professional Associate</i>	2	2	0	.	4	4	0
<i>Colonial Fellow</i>	2	2	0	.	5	5	0
<i>Fellow</i>	4	4	0	.	7	7	0

EXAMINATIONS.

THE PRELIMINARY AND SPECIAL EXAMINATIONS.—Any candidate intending to follow the profession of Surveyor will be accepted on application, but acceptance for the Preliminary Examination does not imply that a candidate, if successful in passing, will necessarily be regarded as eligible for enrolment as a Student, or for admission to the Intermediate and Final Examinations. There are no age limits, but candidates over the age of 25 are permitted to sit for a special Examination, instead of the Preliminary, to test their general knowledge and education. The entrance fee for the examination is £1 11s. 6d.

THE INTERMEDIATE EXAMINATION.—A Candidate must be 19 years of age or over, and, unless studying at a recognised place of instruction, must be a pupil or technical assistant* in the office of a member of the Institution or other person substantially engaged in the profession of Surveyor as defined above. The entrance fee for the Examination is £5 5s. od.

THE FINAL EXAMINATION is open to candidates who have passed the Intermediate Examination; the entrance fee is £5 5s. od.

THE DIRECT FELLOWSHIP EXAMINATION.—Candidates for this Examination must be more than 30 years of age, and their position must be such as would make them eligible for direct election as Fellows on passing the Examination. The entrance fee is £5 5s. od.

The Preliminary and Special Examinations are held annually in January, and the Intermediate, Final and Direct Fellowship Examinations in March. Applications to sit for any one of the Examinations must be on the prescribed forms and must be submitted, together with the examination fees, during the previous September.

The Intermediate, Final, and Direct Fellowship Examinations are divided into four Sub-Divisions, to cover the four main branches into which the profession may roughly be divided, viz. :—I., Chiefly Land Agency; II., Chiefly Valuation; III., Chiefly Building or Quantities; and IV., Chiefly Mining. Candidates may elect to be examined in any one of these sub-divisions, but those proceeding to the Final Examination after passing the Intermediate must do so in the same sub-division.

THE SPECIAL SINGLE EXAMINATION for holders of University degrees in a course of study approved by the Council as bearing upon the profession, is held concurrently with the other professional examinations, and combines the subjects required to be taken in both the Intermediate and Final. Entrance fee £5 5s.

Copies of the rules governing the examinations and giving full particulars thereof, may be obtained from the Secretary on application. The detailed Syllabus and List of Text-Books (which relates to the professional examinations only) can be obtained at a charge of 1s., and past examination papers at 2s. for each annual set.

** Articles, although much to be recommended as a method of training for the profession, are not an essential condition of admission to the Examinations.*

THE LIBRARY AND COLLECTIONS.

The Institution Library contains approximately 12,000 volumes, and includes a topographical section comprising the great County Histories, all the principal local histories, and a London collection; a series of works on British Agriculture, both ancient and modern, and the allied subjects of Forestry, Geology, Botany, Agricultural Chemistry and Vegetable Physiology; a

complete series of professional text-books, including the latest works ; works of general science ; the Public General Statutes from the earliest times ; Law Reports and Law Text-Books ; Parliamentary Papers and Reports ; the Transactions of kindred societies and general works of reference. It also contains a number of valuable single works and rare editions of special interest to the book-lover, as well as a collection of old maps, charts and plans.

The Loan Library is independent of the General Reference Library, and contains some 1,600 volumes, including all the principal professional text-books, which may be borrowed by members according to the prescribed rules.

The Forestry Collection contains a series of home-grown timber exhibits in planks and sections ; preserved specimens of the foliage, flowers and fruit of the more common British trees and of timber insects, injurious and otherwise ; and a collection of saws, tools and other implements used in forestry. Various causes of damage to timber and the commercial uses to which British woods may be put, are also illustrated.

The Geological Museum includes specimens of the fossils found in British geological formations and a collection of stones used in building.

Schedule of Professional Charges.

1929.

TAXATION OF FEES.

When acting in cases where the Surveyor's fees may be the subject of taxation, Members are advised to make arrangements beforehand for the payment of the proper Scale fees.

Fees included in the following Scale are in all cases exclusive of travelling and other expenses, disbursements, plans, copies of documents, and lithography.

Where one Valuer acts between both parties the minimum charge shall be Scale and a half divisible between both parties.

This Scale accords with that authorised by the Auctioneers and Estate Agents' Institute.

1. VALUATION OF FREEHOLD, COPYHOLD OR LEASEHOLD PROPERTY.

One Guinea per cent. on the first £1,000 of the valuation.

Half a Guinea per cent. on the next £9,000 of the valuation.

And a Quarter-Guinea per cent. on the residue of the valuation.

NOTE.—In valuations for mortgage, if an advance is not made, one-third of the above charges, with a minimum fee of five guineas, may be made provided that the intending mortgagee is informed of the arrangement.

2. VALUATION OF FURNITURE, FIXTURES, TRADE STOCKS AND EFFECTS.

5 Guineas per cent. up to £500 and 2½ guineas per cent. on the residue.

3. VALUATION OF PLANT AND MACHINERY.

2½ Guineas per cent. on first £500.

1½ Guineas per cent. on next £4,500.

1 Guinea per cent. on next £5,000.

Over £10,000 by arrangement.

The valuation fee to include inventory.

(Minimum Fee, 5 Guineas.)

4. VALUATION OF HOTEL AND PUBLIC HOUSE FIXTURES, FITTINGS AND CONTENTS.

5 Guineas per cent. on the amount of the Valuation as settled.

WORK UNDER THE LANDS CLAUSES CONSOLIDATION ACT OR OTHER ACTS FOR THE COMPULSORY ACQUISITION OF PROPERTY.

(a) For Qualifying to give Evidence.

Amount.	Gns.	Amount.	Gns.	Amount.	Gns.	Amount.	Gns.
£		£		£		£	
100	5	2,400	25	5,600	41	8,800	57
200	7	2,600	26	5,800	42	9,000	58
300	9	2,800	27	6,000	43	9,200	59
400	11	3,000	28	6,200	44	9,400	60
500	13	3,200	29	6,400	45	9,600	61
600	14	3,400	30	6,600	46	9,800	62
700	15	3,600	31	6,800	47	10,000	63
800	16	3,800	32	7,000	48	11,000	68
900	17	4,000	33	7,200	49	12,000	73
1,000	18	4,200	34	7,400	50	14,000	83
1,200	19	4,400	35	7,600	51	16,000	93
1,400	20	4,600	36	7,800	52	18,000	103
1,600	21	4,800	37	8,000	53	20,000	113
1,800	22	5,000	38	8,200	54		
2,000	23	5,200	39	8,400	55	Half a Guinea per cent on the re-remainder.	
2,200	24	5,400	40	8,600	56		

Where works of reinstatement are negotiated by the Surveyor the cost of these works should be taken into account in calculating the fee; and any amount set off in respect of Betterment should be added to the amount of settlement for that purpose.

NOTE.—This Scale, known as Ryde's Scale, does not apply to Arbitrators or Umpires, nor in cases of easement. It is exclusive of attendance on Juries or Umpires or at Arbitrations, in respect of which the minimum fee is £5 5s. per diem.

(b) To the Valuer preparing the Case for hearing.

(Including negotiation for a settlement where required.)

One-third additional to the Scale shown under (a).

6. VALUATION FOR PROBATE OR ESTATE DUTY.

Freehold, Copyhold and Leasehold Property.

1 Guinea per cent. on first £1,000 of the valuation; $\frac{1}{2}$ Guinea per cent. on next £4,000; $\frac{1}{4}$ Guinea per cent. on residue.
(Minimum Fee, 5 Guineas.)

Personal Property.

5 Guineas per cent. on the first £100 of the valuation; $2\frac{1}{2}$ Guineas per cent. on next £400; and $1\frac{1}{2}$ Guineas per cent. on the residue (to include the Inventory).

(Minimum Fee, 5 Guineas.)

NOTE.—This Scale (No. 6) does not apply to contested cases.

7. VALUING FOR ANNUAL RENTAL.

Agricultural Property.

$7\frac{1}{2}$ Guineas per cent. up to £250; 5 Guineas per cent. on next £250; $2\frac{1}{2}$ Guineas per cent. on residue.
(Minimum Fee, 5 Guineas.)

Business and Residential Property.

5 Guineas per cent. up to £300; $2\frac{1}{2}$ Guineas per cent. on residue.
(Minimum Fee, 5 Guineas.)

8. VALUATION FOR RATING PURPOSES OF SINGLE PROPERTIES.

For valuations for Ratepayers, Rating Authorities, Assessment Committees, or County Valuation Committees, a valuation fee upon the following scale :—

Net Annual Value.			
Not exceeding £1,000	2	Guineas per cent.	plus 5 Guineas.
Exceeding £1,000 and not exceeding £5,000	2	"	" with a minimum fee of 25 Guineas.
Exceeding £5,000 and not exceeding £10,000	2	"	" upon £5,000.
	1½	"	" the residue.
Exceeding £10,000 and not exceeding £20,000	2	"	" £5,000.
	1½	"	" £5,000.
	1¼	"	" the residue.
Exceeding £20,000	2	"	" £5,000.
	1½	"	" £5,000.
	1¼	"	" £10,000.
	1	"	" the residue.

For valuations for Ratepayers, the Net Annual Value for the purposes of this Scale of Fees is the Net Annual Value in the Valuation List at the time when objection is lodged.

For valuations for a Rating Authority or an Assessment Committee, the Net Annual Value is the Net Annual Value finally determined by the Assessment Committee.

NOTE.—In addition to the above scale a fee of 5 guineas per day in respect of attendance before Assessment Committees and 10 guineas per day for attendance before Quarter Sessions.

9. FARM VALUATIONS.

(a) For Valuing Live and Dead Farming Stock, Agricultural Plant, Fixtures and Growing Crops :—

- 5 Guineas per cent. on the first £100.
- 2½ Guineas per cent. on the residue.

(b) For Valuing Ordinary Farm Tenant Right (not including the above) :—

- 5 Guineas up to £100.
- 2½ Guineas per cent. on next £900.
- 1½ Guineas per cent. on the residue.

The above charges (a) and (b) are to be calculated on the GROSS amount of a valuation before any deductions are made therefrom for dilapidations or other matters dealt with, and are not intended to cover the preparation and adjustment of Claims for disturbance under the Agricultural Holdings Acts, or other special matters, for which an additional charge commensurate with the amount of work involved is to be made.

(c) For Settling Dilapidations to Buildings, Land, etc. :—

- 5 Guineas per cent. on amount of the settlement.

10. MARKING, VALUING, AND SELLING TIMBER AND UNDER-WOOD.

- 5 Guineas per cent. on the amount realised.

When Valuing only :—

- 5 Guineas per cent. on £500.
- 2½ Guineas per cent. on residue.

11. SALES OF FREEHOLD AND COPYHOLD ESTATES AND HOUSES AND GROUND LEASES.

(a) Negotiating a Sale by Private Contract or introducing a Purchaser.

- 5 per cent. on first £300.
 2½ per cent. on next £4,700.
 1½ per cent. on residue.

(b) Sales by Auction.

(Including advising as to reserves.)

Commission same as in (a) for Sale by Private Contract.

Sale before Auction.

After issue of advertisements Commission same as in (a).

Non-Sale.

In the event of non-sale at the Auction a fee, the amount of which is a matter of arrangement, shall be payable.

Sale after Auction.

In the event of the property being sold within three months after the Auction, the charges on non-sale would merge into the ordinary commission then payable.

NOTES.—(1) In addition to the above charges, whether under (a) or (b), a commission on the amount paid for chattels, other moveable effects, timber and tenant-right, of 5 per cent. on £500 and 2½ per cent. on residue (to include inventory and valuation if required) is payable.

(2) Where the division of an estate into a number of lots involves substantial additional work, there shall be an increased remuneration to be arranged between the vendor and auctioneer.

(3) In cases where two agents are co-operating at the request of the owner, the commission shall be at the rate of Scale and a quarter.

12. EFFECTING A PURCHASE.

(Including advising as to value if required.)

One-half the fee charged on Sales.

NOTE.—When more than one property has been reported upon, an extra fee will be chargeable Where no purchase is effected, the usual fee for valuation should be charged.

13. LETTING LAND ON A BUILDING LEASE.

(a) On Ground Rents up to £50, one year's Ground Rent.

(b) On Ground Rents exceeding £50 and not exceeding £100—as in (a) on the first £50, plus 75 per cent. on the residue.

(c) On Ground Rents exceeding £100 and not exceeding £1,000—as in (b) on the first £100, plus 50 per cent. on the residue.

(d) On Ground Rents exceeding £1,000—as in (c) on the first £1,000, plus 25 per cent. on the residue.

Where a premium is paid there would be payable 5 per cent. on the first £1,000 and 2½ per cent. on the balance.

14. THE ASSIGNMENT OF BUILDING AGREEMENTS AT A PREMIUM.

One-half the scale charge for letting land on a building lease (No. 13, above), together with 5 per cent. on the first £1,000 of the premium and 2½ per cent. on the balance.

15. FOR APPROVING PLANS SUBMITTED BY LESSEES, AND INSPECTING BUILDINGS DURING PROGRESS.

One Guinea per cent. up to £20,000 on the estimated cost of each building. Half Guinea per cent. on residue.

(Minimum Fee, 3 Guineas.)

16. ESTATE AGENCIES AND COLLECTION OF RENTS OR TITHES.

(Including Management, where required.)

Ground Rents	2½ to 5 per cent. on the gross rental, according to the amount of the rents and number of collections.
Other property and tithes	5 per cent. on the gross rental.
Agricultural property	7½ " " "
Weekly property	10 " " "

17. ON LETTING UNFURNISHED PREMISES OR DISPOSING OF LEASES OTHER THAN GROUND LEASES BY ASSIGNMENT OR OTHERWISE.**(a) On Letting Unfurnished Premises.**

If the Rent be £100 or less :—

Where the term is for One Year or less—

5 per cent. on One Year's Rent.

Where the term is for more than One Year—

7½ per cent. on One Year's Rent.

If the Rent be over £100 the scale above shall apply to the first £100. On the excess rental over that amount—

Where the term is for Three Years or less—

5 per cent.

Where the term is for more than Three Years—

7½ per cent.

In the case of Leases requiring the Lessee to undertake the Repair of the Demised Premises, the Commission shall be 10 per cent. on One Year's Rent, whatever the term.

(b) Disposal of Leasehold Property.

On Disposing of all Leases (other than Ground Leases) by assignment or otherwise :—

On the Rent the same Commission as for a Letting.

(a) and (b).

In either of the above cases, (a) and (b), upon the premium and any consideration which is equivalent thereto, a Commission of 5 per cent. up to £1,000, and 2½ per cent. on the residue; and on any sum obtained for Fixtures, Furniture, or Effects of any kind, a Commission of 5 per cent. up to £500, and 2½ per cent. on the residue.

Should the rent be a progressive one, then the Commission is based on the average rent for the whole period of the term granted.

When a property, which an Agent has been instructed to let or sell, is let by him with an option to purchase, and the tenant afterwards exercises his option, the Commission for selling, less the Commission already paid on the letting, will then become payable.

18. ON LETTING FURNISHED PREMISES AND SPORTING RIGHTS, INCLUDING COLLECTION OF RENT.

5 per cent. on the first year's rental, and 2½ per cent. on the rental for the remainder of the term.

19. ON NEGOTIATING TENANCIES OF UNFURNISHED PREMISES.

WHEN ACTING ON BEHALF OF THE TENANT.

One-half the Scale on letting.

NOTE.—Where more than one property has been reported upon an extra fee will be chargeable.

20. PREPARING SPECIFICATION OF DILAPIDATIONS AND SETTLING THE AMOUNT IF REQUIRED.

Five Guineas per cent. on the amount of the settlement or on the estimated cost of complying with the Schedule.

(Minimum Fee, 5 Guineas.)

21. LEVELLING, PREPARING DRAWINGS AND SETTING OUT ESTATES FOR ROAD-MAKING, DRAINAGE, ETC., AND SUPERINTENDING THE EXECUTION OF THE WORKS.

The charge for the preparation of a general development scheme must necessarily vary with the character and size of the estate.

For Road Construction, the preparation of drawing and specifications, obtaining the approval of the Authority, obtaining tenders and superintending construction of roads and sewers—

5 per cent. upon the outlay.

NOTE.—Where the work is not proceeded with, half the above scale will be charged.

22. FOR LAND SURVEYING AND THE PREPARATION OF PLANS AND MAPS.

Fee by arrangement, depending on the intricacy of the work.

23. DESIGNING NEW BUILDINGS, ARCHITECTURAL WORK.

The R.I.B.A. Scale, Section 1 of which is set out below :—

I. FEES ON NEW WORKS.

For taking the Client's instructions, preparing sketch design, making approximate estimate of cost by cubic measurement, or otherwise, preparing drawings and specifications for the purpose of estimates, obtaining tenders, advising on tenders and in preparation of contract, selecting and instructing Consultants, furnishing to the Contractor one copy of the drawings and specification and such other details as are necessary for the proper carrying out of the works, general supervision as above defined, issuing certificates for payment, and passing and certifying accounts, the charge in respect of new works is to be a percentage on the total cost of all executed works as follows :—

- (a) If the contract or order exceeds £2,000 the percentage is to be 6 per cent.
 - (b) If the contract or order does not exceed £2,000 the percentage is to be 10 per cent. in the case of works costing £100 graduated to 6 per cent. in the case of works costing £2,000 as the special character of such works may render appropriate.
-

24. PREPARING BILLS OF QUANTITIES AND VALUING WORK EXECUTED.

I. LUMP SUM CONTRACTS : ARCHITECTURAL WORK.

- (a) Taking out and preparing Bills of Quantities :—
 $2\frac{1}{2}$ per cent. upon the estimated cost of the work up to £5,000.
 2 per cent. upon the estimated cost of the work above £5,000.

Provided always that the fee payable is not less than it would be for a smaller amount.

For such portion of the works as is alterations to existing buildings, the fee payable to be increased by $\frac{1}{4}$ per cent.

Fees are to be calculated upon the basis of the accepted tender for the whole of the work. In the event of no tender being accepted, fees are to be calculated upon the basis of the lowest tender received. In the event of no tender being received, the fees are to be calculated upon a reasonable valuation of the work, based upon the Bills of Quantities.

In calculating the amount on which fees are payable, the total of the Credit Bill (if any) and the total of any Alternative Bills are to be added, but any Omission Bill forming part of an Alternative Bill is not to be included unless actual measurement is necessary to arrive at the Omission.

(b) Pricing out estimates :— $\frac{1}{2}$ per cent.

(c) Measuring and making up account of variations upon Contracts including pricing :—

$2\frac{1}{2}$ per cent. upon the amount of the gross additions ; and

$1\frac{1}{2}$ per cent. upon the amount of omissions, less the total of Provisional sums or Provisional work, when omitted as a whole.

(d) Preparing approximate estimates :— $\frac{1}{2}$ per cent. upon the estimated cost.

(e) Surveying works in progress, taking particulars and reporting for Interim Certificates :—

$\frac{1}{2}$ per cent. upon the amount of the valuation.

For any additional services required beyond the above, the fee to be based upon the time involved and the expenses incurred, but in no case to be less than a minimum fee of £5 5s. per day.

(f) Taking particulars on site and writing specifications for works of alteration or repair, including supervision if required :— $7\frac{1}{2}$ per cent. on the amount expended, or, alternatively, a charge to be based upon the time involved.

NOTE.—In cases where any of the materials used in construction are supplied by the Building Owner, the percentage charge to be made upon the estimated or actual value thereof.

II. SCHEDULE CONTRACTS : ARCHITECTURAL WORK.

(a) Preparing, pricing and agreeing a Schedule of Prices : $\frac{1}{2}$ per cent. upon the cost of the work.

(b) Measuring, bringing to account and valuing work done :— $2\frac{1}{2}$ per cent. upon the gross amount of the account.

NOTE.—In cases where any of the materials used in construction are supplied by the Building Owner, the percentage charge to be made upon the estimated or actual value thereof,

III. LUMP SUM CONTRACTS : ENGINEERING WORK.

SCHEDULE CONTRACTS : ENGINEERING WORK.

Generally speaking, the charges for the foregoing services in relation to work which can be classed as Engineering Work are, as regards the percentages, to be half those for Architectural work, but the same as the latter in respect of charges based upon time.

IV. LITIGATION AND ARBITRATION.

For Qualifying to give evidence; settling proofs; conferences with Solicitors and Counsel; Attendance in the Courts or before Arbitrators, or other tribunals; and for other services in connection with litigation and arbitration the charges are to be based upon the time involved, but are in no case to be less than a minimum of £5 5s. per day.

THE CHARTERED SURVEYORS' INSTITUTION

(INCORPORATED BY ROYAL CHARTER)

12, GREAT GEORGE STREET, WESTMINSTER, S.W.1.

LIST OF MEMBERS, JANUARY 1st, 1931.

Patron :
HIS MAJESTY KING GEORGE V.

Honorary Members.

Date of Election and Transfer.	HONORARY MEMBERS.	Address.
1904	Armstrong, The Right Hon. Lord ..	Jesmond Dene, Newcastle-on-Tyne
A. 1880 M. 1910	Bankes, The Right Hon. Lord Justice Eldon	45, Eaton Square, S.W.
1895	Bedford, His Grace The Duke of, K.G.	15, Belgrave Square, S.W.
1920	Bledisloe, The Right Hon. Lord, P.C., K.B.E. ..	Oxford and Cambridge Club, S.W.
1926	Butault, Colonel L.	9, Rue de Rosny, Neuilly-sur-Marne (Seine-et-Oise)
1910	Chalmers, The Right Hon. Lord, G.C.B.	United Universities Club, 1, Suffolk Street, S.W.1
1918	Close, Colonel Sir Charles, K.B.E., C.B., F.R.S.	Mayfield, Christchurch Road, Winchester
